General Information Brodart Contract Furniture

ORDERING INSTRUCTIONS

Your order can be entered and acknowledged promptly only if you supply us with certain essential information. A clean purchase order is needed to be entered into the manufacturing production process (Product Number, Quantity, Fabric, Finish, Species, Layouts, Photos, ect.). If any of these items are missing, your purchase order cannot be processed.

- a. Each item to be purchased must be identified by a complete catalog number.
- b. The quantity of each item to be purchased.
- c. If an item is modified in any way, the letters "MOD" must be used as a suffix on the catalog number.
- d. Unit price and extended price as determined from the Brodart price list, or a quotation from Brodart.
- e. If shop drawings are needed, note this requirement on your purchase order. You must supply architectural prints of pertinent building areas when requesting shop drawings.

Failure to supply essential order information may result in delays in the processing of your order.

TERMS AND CONDITIONS

Prices

These prices supersede all previously issued prices. All prices herein are list prices, unless otherwise noted, and are subject to change without notice. Prices stated are for our standard finishes, laminates, and materials. Any deviations from 'standard' are subject to an up charge. Up charges for specials will be quoted upon request.

Discounts

Discounts can be obtained by contacting a Project Coordinator. When obtaining discounts, you must be prepared to provide total list price information, estimated delivery dates, as well as all other information located on the *Discount Request Form*.

Payment Terms

Net 30 days from date of invoice, F.O.B. Factory

Taxes

Any sales or excise tax, or any other tax or government charge now or hereafter levied upon the product, sale, use or shipment of goods shall, at the Company's option, be charged to the customer.

Orders

All orders are subject to acceptance by Brodart Co., 280 North Road, Clinton County Industrial Park, McElhattan, PA 17748.

Acknowledgements

Brodart will ship products as detailed on the acknowledgement. Please confirm that all items are ordered as intended. Brodart will not accept responsibility for products shipped as acknowledged.

Cancellations

All orders are considered firm and cannot be cancelled without Brodart's approval. A cancellation charge will be required based on costs incurred. Minimum cancellation charge will be **\$50.00**

Order Changes

Changes to orders already in process are subject to a charge covering the making of the change. You will be required to indicate your acceptance of the additional costs before Brodart can proceed with the change. Minimum charge is **\$50.00**, other charges are as follows: Within 8 weeks of ship date - minimum charge is **\$150.00** plus any material costs incurred. Once the job is within 6 weeks and is in full production - minimum charge is **\$350.00** for the change and any material and labor costs involved. Brodart reserves the right to deny change requests within 6 weeks of the ship date.

All product ships from McElhattan, PA with the following exceptions:

Gondola Display Shelving Units:

For units ordered in quantities of 5 or less (or the only products on the order); units are shipped from 280 North Road with all other Furniture. For units ordered in quantities of 6 or more; product will ship direct from Columbus, Ohio.

Claims – Freight

All shipments are delivered to common carriers in good condition. Brodart's liability ceases once the order is delivered to the carrier. If your order is received short or damaged, you should note on your freight bill and file a claim immediately with the carrier.

Claims – Product

Claims against Brodart for defects, errors or shortages must be made by the purchaser, in writing, within 30 days after delivery. Failure to make such claim shall constitute full acceptance of the merchandise.

Returns

No Merchandise may be returned for credit without our previous agreement. Unauthorized returns will not be accepted.

Warranty

Brodart warrants that the Furniture designed and manufactured by it will be free of defects in material and workmanship for a period of twenty-five (25) years for furniture and five (5) years for seating. *Please refer to the official warranty documents for more information.*

Product Specifications

Product specifications are subject to change without notice.

Environmental

Brodart focuses on implementing environmental management practices that ensure our operations are conducted in a manner that respects, protects, and sustains the natural environment. For the most up-to-date information on Brodart's environmental policy including CARB, and more, please visit <http://www.brodartfurniture.com/about/environmental-efforts> or contact a Brodart Furniture representative.

Modified/Custom Products

Modifications in dimension, wood species, and design are available for an additional fee. Completely customized products are available as well on a per-project and per-quote basis. The following part numbers will be used based on the type of product:

CUSTOM	Custom Furniture	TABLEMOD	Custom Table
SHELVEMOD	Custom Shelving	COMPMOD	Custom Computer Furniture
LOUNGEMOD	Custom Lounge Furniture	CARRELMOD	Custom Carrels
HARDWAREMOD	Custom Hardware	CIRCMOD	Custom Circulation
DISPLAYMOD	Custom Display Units	CHAIRMOD	Custom Chair
REPRISEMOD	Custom Reprise	GEOMOD	Custom Geometrix

For any charges not listed in this Price List, please contact a Project Coordinator.

Product Options Brodart Contract Furniture

Antimicrobial Finish:

Brodart's finish now contains an antimicrobial agent formulated to resist mildew growth. This specially formulated finish prevents the growth and action of microbes from the degrading of Brodart Furniture and also helps to inhibit bacterial odors. **There is no up-charge for this additive.**

TABLE 1					
WOOD FINISH OPTIONS					
Oak Wood					
Clear On Oak	O33	Natural Oak	089	Antique on Oak	343
Porcelain on Oak	654	Solar on Oak	716	Victorian on Oak	790
Dark on Oak	801	Mocha on Oak	812	Champagne on Oak	837
Maple Wood					
Clear on Maple	M33	Natural Maple	089	Antique on Maple	343
Porcelain on Maple	654	Solar on Maple	716	Victorian on Maple	790
Dark on Maple	801	Mocha on Maple	812	Champagne on Maple	837
Cherry Wood					
Clear on Cherry	C33	Porcelain on Cherry	654		
Antique on Cherry	343	Victorian on Cherry	790		
Pigmented Stains (Formulated for Maple Wood, available on Oak Wood):					
Grasshopper	570	Pumpkin	515	Ginger	GNG
Storm	546	Fern	FRN	Mustard	MUS
Peaceful Blue	520	Cranberry	CRN	Sky	SKY
Dark Chocolate	580				

Finish Note: The wood finishes listed above are specifically formulated for the wood species listed. Color may vary significantly if the stain is used on a different species of wood. Color may vary on the same wood species due to grain and texture differences. Solid wood and matching veneer have distinct grain and color variations. Harmonious color variations will appear in each Brodart furniture piece.

Custom Finish: Custom finishes on orders over \$5,000.00 **NET** will not require a special finish fee. On orders under \$5,000.00 **NET**, one-step custom finishes are available at an up-charge of \$250.00 **NET** per color, per order. On orders where the finish is a multi-step or hand-wiped finish, a special up charge will be applied. Contact Brodart for a quotation.

HIGH-PRESSURE LAMINATES: WilsonArt laminates in finishes ending with "-60" and "-38" are preferred for Brodart Furniture. Up-charges for laminate that deviates from these are listed below. Please note that these selections may require a change in lead time as well. For an up-to-date listing of available WilsonArt Laminates, please visit: www.wilsonartcontract.com/.

TABLE 2		
Laminate Manufacturer & Type	Grade	Up-Charge

General Specifications

DESKTOP

Standard desktop is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The desk top receives a solid Northern-grown Red Oak or maple flush edge band 5/8" x 1-3/16" thick, radiused 1/2" to form a waterfall shape on the patron side. A 1/4", solid Northern-grown Red Oak or maple edge band is applied to the remaining three sides of the desk top, with top and bottom edges have a 1/8" radius. All edges are applied to the desktop after the laminate and backer sheets are applied, constituting an external edge band. Desktop is positioned over the end panels of the desk module, flush with the outside edges of the end panels.

END PANEL

Desk module end panel is 1" thick, 3-ply, 45# density particleboard core with select plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed edges are externally banded with a 1" x 1.6mm thick Northern-grown Red Oak or maple veneer edge band. The end panel and front panel are joined with 3/4" x 3/4" thick solid hardwood cleats screwed to the inside surface of the panel. Each end panel receives a 3" diameter egress grommet to provide for wire passage and two adjustable glides to allow leveling of the individual units.

FRONT PANEL

The front panel is 3/4" thick; 45# density particleboard core comprised of select rift cut Northern-grown Red Oak veneers or maple plain sliced slip matched veneers. Exposed edges are externally banded with a 3/4" x 1.6mm thick, veneer edge band. A 6"H x 3/4"D recessed, ebonized, toe space is incorporated at the bottom of the panel. The front panel is positioned over the end panels of the desk module, flush with the outside edges of the end panels. Double wide units have two front panels to give the appearance of two individual units.

DESK DIMENSIONS

Standing-Height Desk, overall:

39-3/16"H x 35"W x 30"D or 39-3/16"H x 70"W x 30"D.

Sitting-Height Desk, overall:

32-3/16"H x 35"W x 30"D or 32-3/16"H x 70"W x 30"D.

WORK SURFACE

Work surface is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The exposed edge receives a 1/4" thick, Northern-grown Red Oak or maple solid internal edge band in straight design. The back edge of the work surface has a plastic black strip, 1-1/2"W, which projects above the work surface 1/4" to act as a retainer. The work surface is 24-1/2"D and is positioned 1-1/2" away from the front panel, creating a cord drop space. Adjustable work surfaces positioned at heights of 36", 32" or 27" are available in single wide standing height desks.

Note: See Brodart optional electrical accessories for electrical power-distribution system for desk modules.

SHELVES

Shelves are constructed of 7-ply, furniture-grade veneer-core hardwood plywood, with Northern-grown Red Oak plain sliced face veneer or maple plain sliced face veneer. Exposed edges receive a 1.6mm thick, solid-oak or maple edge band.

DRAWER

Drawer is constructed of solid Northern-grown Red Oak or maple with 1/4" thick wood bottom panel. Drawer has 3-ply particleboard fronts with select oak-face veneer or maple veneer. Box drawer has extension slides with 100# load capacity. File drawer has full-extension slides with 100# load capacity. Double Units: 32-3/16"H x 70"W x 30"D

General Specifications

TABLETOP

Tabletop is 1-3/16" thick, 9-ply solid hardwood plywood or 3-ply 45# density particleboard, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. Edges are solid Northern-grown Red Oak or maple. Top receives an external solid drop edge Northern-grown Red Oak or maple band 5/8" x 1-5/8" thick, radiused 1/2" to form a waterfall shape.

Note: Tables with a depth exceeding 48" receive only 1-3/16" thick, 3-ply, 45# density particleboard core.

APRON (OPTIONAL)

A 4"H x 1" thick solid Northern-grown Red Oak or maple apron is fitted between the legs and behind the extended tabletop edge band. Starting 1/2" in from each end, the apron receives a radius that peaks at 2" in the center. The ends of each apron receive a 1/2" radius.

Aprons are attached to the table using wood cleats screwed to the underside of the tabletop. Aprons on round tables go straight between the legs

Note: Aprons are not available for trapezoid shaped tables or Pedestal Base tables.

LEG

The leg is glued up 2-1/4" solid Northern-grown Red Oak or maple. The leg is molded into a triangle shape with the front face receiving a 2" radius and outside edges receiving a 1/2" radius that tapers to a 90° right angle. A 1/4" wide x 1/16" deep horizontal vein line is routed 2" up from the bottom of the leg. A 1/8" chamfer is placed at the bottom of the leg. Each leg receives a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut which is further recessed into the leg by means of a counter-sink boring which accepts the upper two-thirds of the glide. Legs attach to tabletops by means of a 5" square x 5/16" thick cold-rolled steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The assembled leg is attached to the tabletop by five 5/16" x 1" machine bolts engaging internal and external threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the extended table edge band.

TABLETOP SUPPORT

For maximum rigidity, rectangular tables 60" wide or more receive a V-shaped, 14-gauge steel keel securely fastened to the underside of the tabletop. Tables 48"D and more than 60"W, receive two steel keels parallel to the length of the table. Tables 90" or wider receive two extra legs located under the center of the table to provide added support.

Note: Center support legs will be glued up, 2-1/4" square solid Northern-grown Red Oak or maple. All vertical edges of legs receive a 1/2" radius. Bottom edges of legs are chamfered 1/8". Each leg has a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a counter-sunk boring which accepts the upper two-thirds of the glide.

PEDESTAL

Pedestal base will be solid Northern-grown Red Oak or maple. The base consists of four assembled leg components comprised of 6/4 solid material assembled using mortise and tenon construction. The upper horizontal part of the each base leg will receive borings for attaching the assembly to the tabletop. The lower horizontal piece will receive a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut which is further recessed into the leg by means of a counter-sink boring which accepts the upper two-thirds of the glide. All pedestal base edges will receive a 1/4" radius. The four assembled base components will connect to a 2-1/4" x 2-1/4" solid Northern-grown red oak or maple post using metal to metal hardware fasteners forming a one piece pedestal. Table tops are attached to base by bolting through the upper horizontal members of base into internal and external threaded bushings embedded in the under side of the table top.

Optional Wood Curved Aprons for Tables

An Apron is a 4"H x 1" thick, curved oak or maple piece of wood that is fitted between the legs of a table. The Apron is attached to the table using wood cleats that are screwed to the underside of the tabletop. These Aprons are optional and must be ordered separately.

Note: Aprons are not available for Trapezoid Shaped Tables or Pedestal Base Tables.

General Specifications

TABLETOP

Tabletop is 1-3/16" thick, 3-ply 45# density particle board, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. Edges are solid Northern-grown Red Oak or maple. The top receives a solid drop edge band of Northern-grown Red Oak or maple, 5/8" x 1-5/8" thick, radiused 1/2" to form a waterfall shape.

Note: Standing Height Tables are Apron construction.

TABLETOP SUPPORT

For maximum rigidity, rectangular tables 60" or more wide receive a V-shaped, 14-gauge steel keel securely fastened to the underside of the tabletop. Tables 48"D and more than 60"W, receive two steel keels parallel to the length of the table. Tables 72" or wider receive two extra legs located under the center of the table to provide added support.

Note: Center support legs will be glued up, 2-1/4" square solid Northern-grown Red Oak or maple. All vertical edges of legs receive a 1/2" radius. Bottom edges of legs are chamfered 1/8". Each leg has a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a counter-sunk boring which accepts the upper two thirds of the glide.

PRIVACY PANEL

The privacy panel consists of end panels and a back constructed of 3/4" thick veneered particleboard 6"H x 10-7/16"D. The front edges of the privacy panel end panels receive a 3" radius. Exposed panel edges are banded with 1.6mm solid oak or maple. The privacy panel attaches securely to the tabletop by screws passing through the tabletop and into the privacy panel panels. The privacy panel is finished to match the table and designed to obscure wires exiting computer equipment, to eliminate incidental tampering and create defined patron space.

LEG WITHOUT APRON

The leg is glued up 2-1/4" solid Northern-grown Red Oak or maple. The leg is molded into a triangle shape with the front face receiving a 2" radius and outside edges receiving a 1/2" radius that tapers to a 90° right angle. A 1/4" wide x 1/16" deep vein line is routed 2" up from the bottom of the leg. A 1/8" chamfer is placed at the bottom of the leg. Each leg receives a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a countersink boring which accepts the upper two-thirds of the glide. Legs attach to tabletops by means of a 5" square x 5/16" thick cold rolled steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The assembled leg is attached to the tabletop by five 5/16" x 1" machine bolts engaging internal and external threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the extended table edge band.

LEG WITH APRON

Leg is glued up 2-1/4" solid Northern-grown Red Oak or maple. The leg is molded into a triangle shape with the front face receiving a 2" radius and outside edges receiving a 1/2" radius that tapers to a 90° right angle. A 1/4" wide x 1/16" deep vein line is routed 2" up from the bottom of the leg. A 1/8" chamfer is placed at the bottom of the leg. Each leg receives a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut which is further recessed into the leg by means of a countersink boring that accepts the upper two-thirds of the glide. Legs attach to the aprons by means of formed 14-gauge steel corner brackets. Each leg is bolted to the corner bracket with two 5/16" - 18 hex head bolts which pass through the bracket and engage threaded bushings, embedded into the leg and cross-pinned with a 3/16" diameter steel pin.

APRON (Standard for Standing Height, Optional for Sitting Height)

A 4"H x 1" thick solid Northern-grown Red Oak or maple apron is fitted between the legs and behind the extended tabletop edge band. Starting 1/2" in from each end, the apron receives a radius that peaks at 2" in the center. The ends of each apron receive a 1/2" radius. Aprons are attached to the table by means of wood cleats and formed 14-gauge steel corner brackets. Aprons on round tables go straight between the legs.

LEG (CENTER)

Center support legs will be glued up, 2-1/4" square solid Northern-grown Red Oak or maple. All vertical edges of legs receive a 1/2" radius. Bottom edges of legs are chamfered 1/8". Each leg has a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a counter-sunk boring which accepts the upper two-thirds of the glide. Legs attach to tabletops by means of a 5" square x 5/16" thick cold-rolled steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The assembled leg is attached to the tabletop by five 5/16" x 1" machine bolts engaging internal and external threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the extended table edge band.

ELECTRICAL

Each position on an Information Access Table receives one 3" diameter grommet for wire passage and J-channel wire manager to hold excess wires. Grommets are ABS black plastic with notched removable cap. J-channel is 18-gauge steel with electrostatically applied black powder paint and is mounted to the underside of the tabletop.

TABLETOP HEIGHT

Optional Wood Curved Aprons for Sitting Height Computer Tables

An Apron is a 4"H x 1" thick, curved oak or maple piece of wood that is fitted between the legs of a table. The Apron is attached to the table using wood cleats that are screwed to the underside of the tabletop. These Aprons are optional and must be ordered separately.

Note: Curved Apron is Standard on Standing Height Tables.

General Specifications

WORK SURFACE

Work surface is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The front edge of the work surface receives a drop edge band of Northern-grown Red Oak or maple, 5/8" x 1-5/8" thick with a 1/2" radius to form a waterfall shape. The back edge of the work surface has a black plastic strip, 1-1/2"W, which projects above the work surface 1/4" to act as a retainer.

Work surface is 27-1/2"D with an additional 1-1/2"W cord drop available in two widths: 48" and 36", and adjustable in heights to 27", 32" and 39". Workstation is of modular starter and adder design. Work surface is attached to end and intermediate panels by means of two metal 23" long "Z" brackets with 5/16" x #18 hex-head bolts engaging embedded internal and external threaded bushings. The back panel is attached to end and intermediate panels using hidden metal keyways and shoulder screws. The shelf is attached to end, intermediate and back panels with 3/4" x 3/4" steel, black painted angle brackets and black #8 screws.

END PANEL

End panel consists of a framed panel and plinth base assembly. The framed panel assembly consists of Northern-grown Red Oak or maple hardwood rails and stiles with a veneered panel. The panel is 3/4" thick plain-sliced slip-matched Northern-grown Red Oak or maple. The top rail is 2"H x 1" thick and side stiles are 1" x 1" with a 1" radius. The plinth base is composed of one piece of 5/4 solid Northern-grown Red Oak or maple 2-1/4"H x 1" thick. The plinth base receives a molded shape at the top which consists of a 1" radius ending in a 1/4"W reveal and is attached to the bottom of the frame panel assembly by means of three #8 x 3" long flat-head screws and wood glue. The bottom of the plinth receives two 7/8" diameter chrome adjustable glides located 1-1/4" from the plinth ends. End panel attaches to back panels by means of recessed metal fasteners and shoulder screws.

INTERMEDIATE PANEL

Intermediate panels are 1" thick, 3-ply 45# density particleboard core, with select plain-sliced slip-matched Northern-grown Red Oak or maple veneers. The panel will receive a 1.6mm solid oak or maple band on all four (4) sides. Each panel receives a 3" diameter egress grommet to provide for wire passage and two 7/8" diameter chrome adjustable glides located 1-1/4" from the ends. Intermediate panel attaches to back panels by means of recessed metal fasteners and shoulder screws.

BACK PANEL

Back panel is 3/4" thick, 45# density particleboard core of select Northern-grown Red Oak or maple face veneers. The top and bottom edge of the back panel receives 1.6mm solid oak or maple band. Back panels attach to end and intermediate panels by means of recessed metal fasteners and shoulder screws. The back panel on double-faced units receives a 3" diameter grommet located below the work surface to allow passage of electrical and data wires.

SHELF

A 12"D storage shelf, located under the work surface, extends the full width of the station.

ELECTRICAL

To hide excess wires, a 1-1/2" separation between the work surface and back panel is provided.

WORKING SPACE HEIGHTS

Adjustable at 27", 32" and 39"

Abridge Drop Edge Band

General Specifications

WORKSTATION

Workstation is of modular starter and adder design, with an overall height 35-1/4". Work surfaces are available in 36", 48", 73", 97", and 110" widths. A knee-space panel, located below the work surface, supports all work surfaces greater than 48"W. Work surface height is at 27-1/2" and depth is 22-1/2" with a 1-1/2"W cord drop. The work surface is attached to end and intermediate panels by means of two metal 16" long "Z" brackets with 5/16" x #18 hex-head bolts engaging embedded internal and external threaded bushings. The back panel is attached to end and intermediate panels using hidden metal keyways and shoulder screws. The shelf is attached to end, intermediate, and back panels with 1" x 1" steel, black painted angle brackets and black #8 screws.

WORK SURFACE

Work surface is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The front edge of the work surface receives a drop edge band of Northern-grown Red Oak or Maple, 5/8" x 1-5/8" thick with a 1/2" radius to form a waterfall shape. The back edge of the work surface has a plastic black strip, 1-1/2"W, which projects above the work surface 1/4" to act as a retainer.

END PANEL

End panel consists of a framed panel assembly. The framed panel assembly consists of Northern-grown Red Oak or Maple hardwood rails and stiles with a veneered panel. The panel is 3/4" thick plain-sliced slip-matched Northern-grown Red Oak or Maple routed on two (2) edges. The top and bottom rails are 2"H x 1" thick and side bands are 1" x 1" with a 1" radius. The bottom rail is screwed on using #8 x 3" long flat-head screws and wood glue. The side bands receive a 1/4" x 1/16" vein line 2" up from the bottom of the panel. The bottom of the end panel receives two 7/8" diameter chrome adjustable glides located 1-1/2" from the ends. End panel attaches to back panels by means of recessed metal fasteners and shoulder screws.

INTERMEDIATE PANEL

Intermediate panel is 1" thick, 3-ply 45# density particleboard core, with select plain sliced slip matched Northern-grown Red Oak or Maple veneers. The panel receives a 1" x 1.6mm solid oak or maple band. Each panel receives a 3" diameter egress grommet to provide for wire passage and two 7/8" diameter chrome adjustable glides located 1-1/2" from the ends. Intermediate panel attaches to back panels by means of recessed metal fasteners and shoulder screws.

BACK PANEL/PARTITION

Back panel is 3/4" thick, 45# density particleboard core of select Northern-grown Red Oak or Maple face veneers. The top and bottom edge of the back panel receives 1.6mm solid oak or maple band. Back panels attach to end and intermediate panels by means of recessed metal fasteners and shoulder screws. The partition on double-faced units receives a 3" diameter grommet located below the work surface to allow passage of electrical and data wires.

SHELF

Shelf is 3/4" thick x 5"D 45# density particleboard core with face veneers of select Northern-grown Red Oak or Maple. Shelf is banded on the front edge with a 1.6mm solid oak or maple band. The shelf is attached to end and intermediate panels with 1" x 1" steel, black painted angle brackets and black #8 screws. Back corners of shelf have a 3" x 3" cutout to allow for the passage of electrical cords. The shelf is positioned 11-13/16" below the bottom of the work surface.

WIRE MANAGEMENT DOOR

The wire management door is positioned between the bottom of the work surface and the shelf and is designed to form a concealed wire management channel 5"D x 11-5/16"H. The door is 1/4" thick with select oak or maple face veneers. The door slides in two aluminum tracks, one that is attached to the bottom of the work surface while the other is attached to the top of the shelf.

KNEE-SPACE PANEL

All 72" and 96"W workstations, as well as functional corner units, have a knee-space panel positioned under the work surface for additional work-surface support. Units 110"W have two knee-space panels. The knee-space panel is 1" thick, 3 ply 45# density particleboard core with select Northern-grown Red Oak or Maple face veneers. The panel is banded on exposed edges with a 1.6mm solid oak or maple band. The knee-space panel is attached to the back panel using a 1" square, solid oak or maple post. Panels attach to the post using recessed metal fasteners and shoulder screws. The knee-space panel is angled in the back to create a space to allow passage of electrical and data cords. The knee-space panel receives one 7/8" diameter chrome adjustable glide.

General Specifications

TABLETOP

Tabletop is 1-3/16" thick, 3-ply 45# density particle board, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. Edges are solid Northern-grown Red Oak or maple. Top receives a Northern-grown Red Oak or maple external solid flush edge band 5/8" x 1-3/16" thick, radiused 1/2" to form a waterfall shape.

PRIVACY PANEL

Privacy panels consist of two panels constructed of 3/4" thick Northern-grown Red oak or maple veneered particleboard. The two panels are 6"H x 45"W and intersect in the middle of the tabletop to form an "X". Privacy panels receive keyways and shoulder screws for assembly. The front edge of the privacy panel end panel receives a 3" radius. Exposed panel edges are banded with 1.6mm solid oak or maple. The privacy panel attaches securely to the tabletop by screws passing through the tabletop and into the privacy panel. Panels are finished to match the table edge band. Privacy panel is designed to obscure wires exiting computer equipment, to eliminate incidental tampering and create defined patron space.

TABLE BASE

Table base is panel and post construction. Posts are 1-3/4" square, with a 3/4"W x 1/8"D groove to receive panels. Each post has a 1-1/4" diameter, adjustable glide. Base back and vertical panels are 3/4" 3-ply 45# Northern-grown Red Oak or Maple veneered particleboard. Back panels are 23-1/2"H with a 4" base clearance for wire management access. Vertical panels are 26-5/16"H and receive two rubber cushioned chrome glides per panel. Base is assembled using metal to metal hardware fasteners and is attached to tabletop using 12" x 3/4" x 3/4" wood cleats.

WORKING SPACE HEIGHT

Fixed at 27" with a grommet in each position for wire passage.

Details can be found on page GEN 4.

General Specifications

WORK SURFACE

Work surface are 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The desk top receives a solid Northern-grown Red Oak or maple flush edge band 5/8" x 1-3/16" thick, radiused 1/2" to form a waterfall shape on the patron side. Edge band is applied to the desktop after the laminate and backer sheets are applied, constituting an external edge band.

VERTICAL PANEL

Vertical panel is 1" thick, with select plain-sliced slip-matched Northern-grown Red Oak or maple veneers. The panel receives a 1" x 1.6mm solid oak or maple band. Each panel receives a 3" diameter egress grommet to provide for wire passage and two 7/8" diameter chrome adjustable glides located 1-1/4" from the ends. The intermediate panel attaches to back panels by means of recessed metal fasteners and shoulder screws.

BACK PANEL

Back panel is 3/4" thick, 45# density particleboard core of select Northern-grown Red Oak or maple face veneers. The top and bottom edges of the back panel receive 1.6mm solid oak or maple bands. Back panels attach to end and intermediate panels by means of recessed metal fasteners and shoulder screws. The back panel receives a 3" diameter grommet located below the work surface to allow passage of electrical and data wires.

ELECTRICAL ACCESS DOOR

Access door is 3/4" thick and comprised of select face veneers of Northern-grown Red Oak or maple over a particleboard core. Panel is externally banded on all four sides with a 1.6mm solid oak or maple edge band. Access door has a full-length hinge and lock and can be located in any one of the back panels on the station.

CPU/UTILITY SHELF

Shelf is 3/4" thick x 15"D, 7-ply veneer-core oak or maple plywood construction. Front edge receives a 1/2" solid oak or maple band.

CENTER CAP

Cap is constructed of 3/4" particleboard core with plastic and backer. Available in full-hexagon, half-hexagon, or square configuration; the cap closes the center opening by mounting at the top rear edge of end panels on systems arranged in full- or half-hexagon configuration.

AVAILABLE WORKING SPACE

Depth of monitor and keyboard combined cannot exceed 29".

WORKING SPACE HEIGHTS

Working space is adjustable to:
 Standing Height: 39"
 ADA Height: 32"
 Sitting Height: 27"

General Specifications

WORK SURFACE

Work surface is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The exposed work surface edge receives a Northern-grown Red Oak or maple drop edge band 5/8" x 1-3/16" thick with a 1/2" radius to form a waterfall shape. The back edge of the work surface has a metal black strip, 1-1/2"W, which projects above the work surface 1/4" to act as a retainer.

END PANEL

End panel consists of a framed panel and plinth base assembly. The framed panel assembly consists of solid Northern-grown Red Oak or maple hardwood rails and stiles with a veneered panel. The panel is 3/4" thick plain sliced slip matched Northern grown Red Oak or maple routed on three sides. The top rail is 2"H x 1" thick and side stiles are 1" x 1" with a 1" radius. The plinth base is composed of one piece of 5/4 solid Northern-grown Red Oak or maple 2-1/4"H x 1" thick. The plinth base receives a molded shape at the top which consists of a 1" radius ending in a 1/4"W reveal and is attached to the bottom of the frame panel assembly by means of three #8 x 3" long flat-head screws and wood glue. The bottom of the plinth receives two 7/8" diameter chrome adjustable glides located 1-1/4" from the plinth ends. End panel attaches to back panels by means of recessed metal fasteners and shoulder screws.

BACK PANEL

Back panel is select Northern-grown Red Oak or maple face veneer 3/4" thick, 3-ply 45# density particleboard core of. The top and bottom edge of the back panel receives 1.6mm solid oak or maple band. Back panels attach to end and intermediate panels by means of recessed metal fasteners and shoulder screws. The back panel on double-face units receives a 3" diameter grommet located below the work surface to allow passage of electrical and data wires.

SHELF (MONITOR)

Monitor shelf is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. Laminate has a lo-glare finish resistant to scratches, fading and staining that meets or exceeds NEMA standards. The exposed work surface edge receives a Northern-grown Red Oak or maple flush edge band 5/8" x 1-3/16" thick with a 1/2" radius to form a waterfall shape. Shelf receives one 3" diameter grommet for wire passage.

SHELF (PRINTER)

Printer shelf shall have a fascia, 1-3/4"H x 3/4" thick of solid oak banded to a 3/4" 3-ply 45# density particleboard core of specified depth. The top front corner shall have a 1/8" radius. Glue blocks will also be provided at the intersection of the fascia and top panel. Printer shelf is mounted as pull out shelf on 100# capacity nylon glides.

SHELF (FIXED)

Shelf is constructed of 3-ply 45# density particleboard core, with Northern-grown Red Oak plain sliced face veneer or maple plain sliced face veneer. Exposed edges receive a 1.6mm thick, solid-oak or maple edge band.

General Specifications

END OF RANGE PAC STATION – Free Standing

Unit is designed to fit at the end of a double-faced shelving range. Standard tops are 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The desk top receives a solid Northern-grown Red Oak or maple flush edge band 5/8" x 1-3/16" thick, radiused 1/2" to form a waterfall shape. Edge band is applied to the top after the laminate and backer sheets are applied, constituting an external edge band.

End panel consists of a framed panel and plinth base assembly. The framed panel assembly consists of Northern-grown Red Oak or maple hardwood rails and stiles with a veneered panel. The panel is 3/4" thick plain-sliced slip-matched Northern-grown Red Oak or maple routed on two sides and splined. The top rail is 2"H x 1" thick and side stiles are 1" x 1" with a 1" radius. The plinth base is composed of one piece of 5/4 solid Northern-grown Red Oak or maple 2-1/4" H x 1" thick. The plinth base receives a molded shape at the top which consists of a 1" radius ending in a 1/4" W reveal and is attached to the bottom of the frame panel assembly by means of three #8 x 3" long flat-head screws and wood glue. The bottom of the plinth receives two 7/8" diameter chrome adjustable glides located 1-1/4" from the plinth ends. End panel attaches to back panels by means of recessed metal fasteners and shoulder screws. Inside faces of end panels allow for shelf adjustment on 32mm center. Back panel is 3/4" thick, 45# density particleboard core of select Northern-grown Red Oak or maple face veneers. The top and bottom edge of the back panel receives 1.6mm solid oak or maple band. Unit has two full-depth fixed shelves with 3" diameter grommets and one pullout shelf for the keyboard. Space above the fixed shelves is 11".

END OF RANGE PAC STATION – Panel Mounted

This unit is designed to be attached to a double-faced end panel. Standard top is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The top receives a solid Northern-grown Red Oak or maple flush edge band 5/8" x 1-3/16" thick, radiused 1/2" to form a waterfall shape on the front and two sides with a 1/4" band on the back edge. Edge band is applied to the top after the laminate and backer sheets are applied, constituting an external edge band.

All panels are 3/4" thick, 45# density particleboard core of select Northern-grown Red Oak or maple face veneers. The base of the unit consists of tapered end panels, a back panel, an access panel for wire management and a removable front cover panel that provides access to the wire management. The back and access panel are 9-7/8" wide. The back panel receives a grommet at the base and the access panel receives a 6" wide opening. The front cover is solid and attaches to the access panel.

Abridge Flush Edge Band

End Panel Mounted PAC Station for Wood or Steel Shelving End Panels.

Note: Shelving End Panels are ordered separately and units MUST be attached.

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

DICTIONARY STAND

Standard tops are 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The desk top receives a solid Northern-grown Red Oak or maple flush external edge band 5/8" x 1-3/16" thick, radiused 1/2" to form a waterfall shape on the front and back. A 5/8" x 5/8" book retainer is positioned along the bottom edge of sloped top. End panel consists of a framed panel and plinth base assembly similar to all other Abridge end panels. Inside faces of end panels allow for shelf adjustment on 32mm center.

Back panel is 3/4" thick, 45# density particleboard core of select Northern-grown Red Oak or maple face veneers. The top and bottom edge of the back panel receives 1.6mm solid oak or maple band. Bottom shelf is stationary.

Abridge Flush Edge Band

ATLAS STAND

Standard tops are 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction and receives a solid Northern-grown Red Oak or maple flush external edge band 5/8" x 1-3/16" thick, radiused 1/2" to form a waterfall shape on the front and back. A 5/8" x 5/8" book retainer is positioned along the bottom edge of sloped top. End panel consists of a framed panel and plinth base assembly similar to all other Abridge end panels. The bottom of the plinth receives two 7/8" diameter chrome adjustable glides located 1-1/4" from the plinth ends. Back panel is 3/4" thick, 45# density particleboard core of select Northern-grown Red Oak or maple face veneers. The top and bottom edge of the back panel receives 1.6mm solid oak or maple band. Each unit has five pullout shelves on nylon rollers. Stops on shelves prevent accidental removal. Shelves are 25-3/4"W x 23-7/8"D, with 3" between shelves. Children's height unit contains four pull-out shelves with 2-1/2" between shelves.

Note: Edge Band on long side only. Tops are designed to be inset between end panels. If edge bands are desired on short edges, please enter the part as a modification and specify which bands to be included.

To ensure that tops for steel shelving work with each manufacturer and top method, please specify the exact width and depth of tops. Add 15% for HPL on top and bottom (Steel Shelving ONLY).

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

END PANELS

End panel consists of a framed panel and plinth base assembly. The framed panel assembly consists of Northern-grown Red Oak or Maple hardwood rails and stiles with a veneered panel. The panel is 3/4" thick plain sliced slip matched Northern-grown Red Oak or maple routed on two sides. The top rail is 2"H x 1" thick and side stiles are 1" x 1" with a 1" radius. The plinth base is composed of one piece of 5/4 solid Northern grown Red Oak or maple 2-1/4"H x 1" thick. The plinth base receives a molded shape at the top which consists of a 1" radius ending in a 1/4"W reveal and is attached to the bottom of the frame panel assembly by means of three #8 x 3" long flat-head screws and wood glue. End panels are not machined. No fastening hardware is provided with end panels.

End panels for steel shelving with continuous tops or canopy top inset are designed to have the canopy top "inset" between the end panels.

Note: Exact height and depth of panel must be specified when ordering.

General Specifications

CHAIR FRAME

The end frames are constructed of a framed panel and plinth base assembly. The framed panel assembly consists of solid Northern-grown Red Oak or maple hardwood rails and stiles with a veneered panel. The panel is 3/4" thick plain sliced slip matched Northern grown Red Oak or Maple routed on three sides. The top rail is 2"H x 1" thick and side stiles are 1" x 1" with a 1" radius. The plinth base is composed of one piece of 5/4 solid Northern-grown Red Oak or maple 2-1/4"H x 1" thick. The plinth base receives a molded shape at the top which consists of a 1" radius ending in a 1/4"W reveal and is attached to the bottom of the frame panel assembly by means of three #8 x 3" long flat-head screws and wood glue. The bottom of the plinth receives two 7/8" diameter chrome adjustable glides located 1-1/4" from the plinth ends.

The front stretcher and front seat rail are 3"W x 1" thick Northern-grown Red Oak or maple. The back seat rail is 2-3/4"W x 1" thick solid red oak or maple. The cross stretcher and seat rails are mortised, tenoned, and glued into the side frames.

UPHOLSTERED SEAT AND BACK

The seat and back frame are a single piece of 3/4" bent plywood. The seat portion is fitted with a Dimatrol Webbing and then covered with black cambric fabric for comfort. This is then covered with 3-1/2" foam, which is also used on the chair back. The entire seat and back assembly is covered with the specified upholstery fabric except for the underside of the seat which is covered with a black cambric fabric. Brodart upholstery materials meet requirements of the following fire codes:

Bariatric Lounge

Please specify Wood Finish (Table 1), High-Pressure Laminate; if applicable (Table 2) and Upholstery (Table 5). Details can be found on pages GEN 4 and GEN 5.

General Specifications

TABLETOP

Tabletop is 1-3/16" thick, 3-ply 45# density particleboard, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. Edges are solid Northern-grown Red Oak or maple. Top receives an external solid drop edge Northern-grown Red Oak or maple band 5/8" x 1-5/8" thick, radiused 1/2" to form a waterfall shape.

APRON (OPTIONAL)

A 4"H x 1" thick solid Northern-grown Red Oak or maple apron is fitted between the legs and behind the extended tabletop edge band. Starting 1/2" in from each end, the apron receives a radius that peaks at 2" in the center. The ends of each apron receive a 1/2" radius. Aprons are attached to the table using wood cleats screwed to the underside of the tabletop. Aprons on round tables are fitted between the legs and follow the curvature of the edge band.

Note: Aprons are not available for trapezoid shaped tables or Pedestal Base tables.

LEG

The leg is glued up 2-1/4" solid Northern-grown Red Oak or maple. The leg is molded into a triangle shape with the front face receiving a 2" radius and outside edges receiving a 1/2" radius that tapers to a 90° right angle. A 1/4" wide x 1/16" deep horizontal vein line is routed 2" up from the bottom of the leg. A 1/8" chamfer is placed at the bottom of the leg. Each leg receives a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut which is further recessed into the leg by means of a counter-sink boring which accepts the upper two-thirds of the glide. Legs attach to tabletops by means of a 5" square x 5/16" thick cold-rolled steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The assembled leg is attached to the tabletop by five 5/16" x 1" machine bolts engaging internal and external threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the extended table edge band.

General Specifications

DESKTOP

Standard desk top is 1-3/16" thick, 3-ply, 45# density particleboard core with a top surface of high-pressure laminate .050" thick. A backing sheet not less than .020" thick is also applied for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. Tops receive a 1" W x 1-3/16" thick solid-oak undercut chamfered edge band; applied to top core after lamination of the face plastic. The edge band is beveled at a 39° angle with a 3/8" radius bullnose at the leading edge. A 1/4" thick, solid Northern-grown red oak edge band is applied to the remaining three sides, with top and bottom edges radiused to 1/8". All edges are applied to the desk top after the top and bottom laminate sheets are applied, constituting an external edge band. Desk tops are positioned over the end panels of the desk module, flush with the outside edges of the end panels.

DESK END PANELS

Desk module end panels are 1" thick, 3-ply 45# density particleboard core with select plain-sliced oak veneer on both sides. Exposed edges are externally banded with a 1" x 1/16" thick, Northern-grown oak edge band. The end panels and front panel are joined and secured with 3/4" x 3/4" thick solid hardwood cleats screwed to the inside surfaces of the panels. The bottom of each end panel receives two adjustable glides to allow leveling of the individual units. Each end panel receives a 3" diameter egress and grommet to provide for wire passage.

FRONT PANEL

The front panel is 3/4" thick, 45# density particleboard core comprised of select plain-sliced, slip-matched oak veneer on the inside face. Veneer on outside face is a combination of plain-sliced ash veneer surrounded by rift-cut oak veneer to form a framed appearance. The "frame" is composed of 3-1/4"W rift-cut, oak veneer strips along both vertical edges and the bottom edge, and a 3-1/4"W rift cut oak veneer strip at the top edge shaped to form an internal arc. Panels are externally banded with 1.6mm solid oak on all vertical and horizontal edges, and all edges are eased. The front incorporates a 6"H x 3/4"D recessed and ebonized toe space at the bottom of the panel. The front panel is positioned over the end panels of the desk module, flush with the outside edges of the end panels. Double wide units have two front panels to give the appearance of two individual units.

DESK DIMENSIONS

Standing-Height Desk, overall:

39-1/4"H x 35"W x 30-3/8"D or 39-1/4"H x 70"W x 30-3/8"D.

Sitting-Height Desk, overall:

32-1/4"H x 35"W x 30-3/8"D or 32-1/4"H x 70"W x 30-3/8"D.

ADJUSTABLE WORK SURFACE

Work surfaces are 1-3/16" thick, 3-ply particleboard core, including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. The exposed edge receives a 1/4" thick, solid Northern-grown red oak internal edge band in straight design. The back edge of the work surface has a black strip, 1-1/2"W, which projects above the work surface 1/4" to act as a retainer. The work surface is 24-1/2"D and is positioned 1-1/2" away from the front panel, creating a cord drop space. Adjustable work surfaces are available in single-wide standing-height desks. Work surfaces in standing-height desks (catalog numbers 73-012-S00) may be positioned at heights of 36", 32" or 27".

SHELVES

Shelves are constructed of 7-ply, furniture-grade hardwood, and veneer-core plywood with plain-sliced solid-oak face veneer. Fronts are banded with solid oak. Exposed edges receive a 1.6mm thick solid-oak edge band.

DRAWERS

Drawers are constructed of solid hardwood with 1/4" thick wood bottom panel. Drawers have 3-ply particleboard fronts with select oak face veneers. Box drawers have extension slides with 100# load capacity. File drawers have full-extension slides with 100# load capacity.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply 45# density particleboard core with a .050" high-pressure laminate face and a .020" thick backing sheet on the underside. High-pressure laminate has a low-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. Tabletops are banded on exposed edges with a 1-3/4" thick x 2"W solid-oak external undercut chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled at a 39° angle with a 3/8" radius bullnose at the leading edge. Square and rectangular tabletop edge bands are mitered at all four corners with corners radiused 1/8".

TABLE LEGS – SQUARE WITH APRON

Legs are 2-1/2"W square and glued-up face to face from three solid-oak blanks. All glue joints are tight and smooth. All vertical edges receive a 1/4" radius. Legs receive a horizontal vein line 5/32"W x 3/32"D on the two outside faces of the leg positioned 3-11/32" below the top of the legs. This vein line matches the horizontal vein line on the apron. An identical vein line is positioned 3-1/4" above the bottom of the leg. At the bottom of this vein line the two back sides of the leg taper to a dimension of 1-7/8" x 1-7/8" at the bottom of the leg. Legs receive a 1-1/2" diameter adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a countersunk boring which accepts the upper two-thirds of the glide. Tables are of apron design with a 3-1/2" x 1" thick apron screwed to the underside of the tabletop. A 5/32"W x 3/32"D vein line is positioned at the bottom front surface of the apron to mirror the top horizontal vein line on the table leg. The legs attach to the aprons by means of formed 14-gauge steel corner brackets. Each leg is bolted to the corner bracket with two 5/16" - 18 hex-head bolts which pass through the bracket and engage threaded bushings embedded into the leg and cross-pinned with a 3/16" diameter steel pin.

TABLE LEGS – SQUARE WITHOUT APRON

Legs are 2-1/2"W, square shape, and glued-up face to face from three solid-oak blanks. All glue joints are tight and smooth. All vertical edges receive a 1/4" radius. Legs receive a horizontal vein line 5/32"W x 3/32"D on the two outside faces of the leg positioned 3-11/32" below the top of the legs. An identical vein line is positioned 3-1/4" above the bottom of the leg. At the bottom of this vein line the two back sides of the leg taper to a dimension of 1-7/8" x 1-7/8" at the bottom of the leg. Table is designed without an apron, with legs attaching to the tabletop by means of a 5" square x 5/16" thick steel plate. Plates are painted flat black and have no sharp edges. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted in the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind, and hidden by the extended edge band. Edge bands extend 1/2" below the tabletop. Each leg has a 1-1/2" diameter adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a countersunk boring which accepts the upper two-thirds of the glide.

TABLE LEGS – ROUND WITH APRON

Legs are solid, glued-up oak, face-to-face glued from three to four oak blanks. All glue joints are tight and smooth. Table is of apron design with a 3-1/2"W x 1" thick apron screwed to the underside of the tabletop. A 1/4"D "V" groove is positioned 1/2" from the bottom edge of the apron. The bottom edge is radiused 1/4" to mirror the decorative raised rings on the cylindrical portion of the leg. The top of the leg is 2-7/8" square, radiused 1/4" on the vertical edges. The leg then transitions to a 2-1/2" diameter. A 5/8"W x 2-3/4" diameter ring is positioned 3/16" below squared portion of the leg and is radiused 3/8" to accent the transition from square to round. A second ring is positioned 2" from the bottom of the leg. Each leg has a 2" diameter adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a countersunk boring which accepts the upper two-thirds of the glide. The legs attach to the aprons by means of formed 14-gauge steel corner brackets. Each leg is bolted to the corner bracket with two 5/16" - 18 hex head bolts which pass through the bracket and engage threaded bushings, embedded into the leg and cross-pinned with a 3/16" diameter steel pin.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply 45# density particleboard core with a .050" high-pressure laminate face and a .020" thick backing sheet on the underside. High-pressure laminate has a low-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. Tabletops are banded on exposed edges with a 1-3/4" thick x 2"W solid-oak external undercut chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled at a 39° angle with a 3/8" radius bullnose at the leading edge. The edge band extends 1-3/4" beyond the vertical ends of the panel base and is notched at each end at a 45° angle.

TABLE END PANELS

Table end panels are 1-3/16" thick, 3-ply 45# density particleboard core with select plain-sliced, slip-matched oak veneer on the inside face. Veneer on outside face is sketched to form a "framed" appearance. The frame is composed of 3-1/4" rift-cut, oak-veneer strips along both vertical edges and a 3-1/4" solid wood plinth at the bottom edge. At the top edge is a 3-1/4" rift cut oak veneer strip shaped to form a 1-1/2"H

internal arc. Within the frame is select plain-sliced, slip-matched ash veneer. Panels are externally banded with 1.6mm thick solid oak on the two vertical and top edges. All panel edges are eased. Each panel has two 1-1/4" diameter chrome, adjustable glides. End panels extend 1/4" above tabletop work surface.

Table with Panel Base

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

TABLETOP

Standard tabletops are 1-3/16" thick, 3-ply particleboard core including a top surface of .050" thick high-pressure laminate, and a backing sheet .020" thick for balanced construction. High-pressure laminate has a low-glare finish resistant to scratches, fading, and staining in accordance with NEMA standards. Tabletops are banded on exposed edges with a 1-3/4" thick x 2"W solid-oak external undercut chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled at a 39° angle with 3/8" radius bullnose at the leading edge. Square and rectangular tabletop edge bands are mitered at all four corners with corners radiused 1/8". Note: All Standing-Height Tables are made with an apron. All Sitting-Height Tables are made without an apron to allow adequate leg clearance.

TABLE LEGS – SQUARE WITH APRON

Legs are 2-1/2"W, square shape, glued-up face to face from three solid-oak blanks. All glue joints are tight and smooth. All vertical edges receive a 1/4" radius. Legs receive a horizontal vein line 5/32"W x 3/32"D on the two outside faces of the leg positioned 3-11/32" below the top of the legs. This vein line matches the horizontal vein line on the apron. An identical vein line is positioned 3-1/4" above the bottom of the leg. At the bottom of this vein line the two back sides of the leg taper to a dimension of 1-7/8" x 1-7/8" at the bottom of the leg. Legs receive a 1-1/2" diameter adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a countersunk boring which accepts the upper two-thirds of the glide. Tables are of apron design with a 3-1/2" x 1" thick apron screwed to the underside of the tabletop. A 5/32"W x 3/32"D vein line is positioned at the bottom front surface of the apron to mirror the top horizontal vein line on the table leg. The legs attach to the aprons by means of formed 14-gauge steel corner brackets. Each leg is bolted to the corner bracket with two 5/16" - 18 hex-head bolts which pass through the bracket and engage threaded bushings embedded into the leg and cross-pinned with a 3/16" diameter steel pin.

TABLE LEGS – SQUARE WITHOUT APRON

Legs are 2-1/2"W, square shape, glued-up face to face from three solid-oak blanks. All glue joints are tight and smooth. All vertical edges receive a 1/4" radius. Legs receive a horizontal vein line 5/32"W x 3/32"D on the two outside faces of the leg positioned 3-11/32" below the top of the legs. An identical vein line is positioned 3-1/4" above the bottom of the leg. At the bottom of this vein line the two back sides of the leg taper to a dimension of 1-7/8" x 1-7/8" at the bottom of the leg. Tables are without an apron, with legs attaching to the tabletop by means of a 5" square x 5/16" thick steel plate. Plates are painted flat black and have no sharp edges. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted in the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the extended edge band. Edge bands extend 1/2" below the tabletop. Each leg has a 1-1/2" diameter adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a countersunk boring which accepts the upper two-thirds of the glide. Additional leg(s) added to the center of the table for extra support are 2-1/4" square with a 1/2" radius on vertical edges.

EQUIPMENT SHIELD PRIVACY PANEL

Privacy panels are 10"H, constructed of 1" thick veneer-core plywood. Exposed panel edges are banded with 1.6mm solid oak. The privacy panel attaches securely to the tabletop by screws passing through the tabletop and into the privacy panels. Privacy panels are finished to match the table edge band. Privacy panels are designed to obscure wires exiting computer equipment and to eliminate incidental tampering.

ELECTRICAL

Tables receive 3" grommets in the tabletop for wire passage, and J-channel wire managers are mounted under the tabletop to hold excess wires. Grommets are ABS, black plastic with notched removable cap. J-channel is 18-gauge steel with electrostatically applied black powder paint.

TABLETOP HEIGHT

Standing Height: 39" (with Apron)
Sitting Height: 27-1/2" (without Apron)

General Specifications

CARRELS

Carrels are designed in a modular starter and adder system. The carrel top is 36"W x 28-1/2"D. A 1-1/2"W cord drop runs the width of the carrel between work surface and back panel to allow passage of electrical cords. The carrel shelf is 36"W x 8"D. End panels and intermediate panels are 48"H and 30"D. The carrel top is attached to end panels and intermediate panels by means of a steel, angled "Z" bracket inserted into a route on the underside of the carrel top and screwed. The opposing leg of the "Z" bracket bolts to end panels or intermediate panels with 5/16"-18 hex-head bolts into metal bushings. The back panel is attached to end and intermediate panels using hidden metal keyways and shoulder screws. The shelf is attached to end and intermediate panels and back panels with 3/4" x 3/4" aluminum or steel angle brackets painted black, with black #8 screws.

CARREL TOP

The carrel top is 1-3/16" thick, 45# density particleboard core including a top surface of .050" thick, high-pressure laminate and a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a low-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. The exposed edge is banded with a 1-3/4" thick x 2"W solid-oak external undercut chamfered edge band laminated to the work surface core after lamination of the face plastic. The edge band is beveled to a 3/8" radius bullnose at the leading edge. Bevel is at a 39° angle. The edge band extends 1-3/4" beyond the vertical end and intermediate panels and is notched at each end at a 45° angle. The back edge of the top has a black plastic strip 1-1/2"W which projects above the work surface 1/4" to act as a retainer. All work surfaces are adjustable in height to 29" (Sitting) and 32" (Wheelchair).

END AND INTERMEDIATE PANELS

End and intermediate panels are 1-3/16" thick, 3-ply 45# particleboard core. The inside face of end panels and both faces of intermediate panels are select plain-sliced, slip-matched oak veneer. Veneer on the outside face of end panels is sketched to form a "framed" appearance. The "frame" is composed of 3-1/4" rift-cut, oak-veneer strips along both vertical edges and a 3-1/4" solid wood plinth at the bottom edge. At the top edge is a 3-1/4" rift cut oak veneer strip shaped to form a 1-1/2"H internal arc. Within the frame is select plain-sliced, slip-matched ash veneer. On the double-faced end panel a 3"W rift-cut, oak veneer strip is positioned between the top and bottom oak veneer strips and located at the center of the end panel. The vertical edges of the end panel receive a 1.6mm solid oak external edge band. The top edge of the panel receives a 2-1/4"W x 1-1/4"H solid oak top cap. Top cap is 1-3/16"W at the bottom sloping outward on both sides at a 60° angle. Both the front and back edges of the top cap receive a 3/8" radius. Each panel has two 1-1/4" diameter chrome adjustable glides.

BACK PANEL

The back panel is 1-3/16" thick, 3-ply 45# density particleboard core with select plain-sliced, slip-matched oak veneer on both faces. Top edge of the back panel is shaped to form an arc. Panels extend to within 1" of the bottom of end panels. Panels are banded externally with 1.6mm thick solid oak on top and bottom edges. Banded edges are eased.

CARREL SHELF

The carrel shelf is 3/4" thick x 8"D, 45# density particleboard core with select AA slip-matched oak veneer. The shelf has a 1-3/4"W x 3/4" thick solid-oak external band on the exposed edge.

General Specifications

WORKSTATIONS

Workstations are designed in a modular starter and adder system. The workstation tops are 36" or 48"W x 28-1/2"D. A 1-1/2"W cord drop runs the width of the carrel between work surface and back panel to allow passage of electrical cords. The workstation shelf is 36" or 48"W x 8"D. End panels and intermediate panels are 48"H and 30"D. The workstation top is attached to end and intermediate panels by means of a steel, angled "Z" bracket inserted into a route on the underside of the workstation top and screwed. The opposing leg of the "Z" bracket bolts to end panels or intermediate panels with 5/16"-18 hex-head bolts into metal bushings. The back panel is attached to end and intermediate panels using hidden metal keyways and shoulder screws. The shelf is attached to end, intermediate, and back panels with 3/4" x 3/4" aluminum or steel angle brackets painted black with black #8 screws.

WORKSTATION TOP

The workstation top is 1-3/16" thick, 45# density particleboard core including a top surface of .050" thick, high-pressure laminate and a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a low-glare finish resistant to scratches, fading, and staining in accordance with NEMA standards. The exposed edge is banded with a 1-3/4" thick x 2"W solid-oak external undercut chamfered edge band laminated to the work surface core after lamination of the face plastic. The edge band is beveled to a 3/8" radius bullnose at the leading edge. Bevel is at a 39° angle. The edge band extends 1-3/4" beyond the vertical end and intermediate panels and is notched at each end at a 45° angle. The back edge of the top has a black metal band 1-1/2"W which projects above the work surface 1/4" to act as a retainer. All work surfaces are adjustable in heights to 27" (Sitting), 32" (Wheelchair), and 39" (Standing).

END AND INTERMEDIATE PANELS

End and intermediate panels are 1-3/16" thick, 3-ply 45# particleboard core. The inside face of end panels and both faces of intermediate panels are select plain-sliced, slip-matched oak veneer. Veneer on the outside face of end panels is sketched to form a "framed" appearance. The "frame" is composed of 3-1/4" rift-cut, oak-veneer strips along both vertical edges and a 3-1/4" solid wood plinth at the bottom edge. At the top edge is a 3-1/4" rift-cut oak veneer strip shaped to form a 1-1/2"H internal arc. Within the frame is select plain-sliced, slip-matched ash veneer. On the double-faced end panel a 3"W rift-cut, oak veneer strip is positioned between the top and bottom oak veneer strips and located at the center of the end panel. The vertical edges of the end panels receive a 1.6mm solid oak external edge band. The top edge of the panel receives a 2-1/4"W x 1-1/4"H solid oak top cap. The top cap is 1-3/16"W at the bottom sloping outward on both sides at a 60° angle. Both front and back edges of the top cap receive a 3/8" radius. Each panel has two 1-1/4" diameter chrome adjustable glides.

BACK PANEL

The back panel is 1-3/16" thick, 3-ply 45# density particleboard core with select plain-sliced, slip-matched oak veneer on both faces. Top edge of the back panel is shaped to form an arc. Panels extend to within 1" of the bottom of end panels. Panels are banded externally with 1.6mm thick solid oak on all edges. Banded edges are eased.

WORKSTATION SHELF

The workstation shelf is 3/4" thick x 8"D, 45# density particleboard core with select AA slip-matched oak veneer. The shelf has a 3/4" thick solid oak external band on the exposed edge. The shelf is located under the work surface and extends the full width of the workstation.

WORK SURFACE HEIGHTS

Adjustable at 27", 32" and 39".

General Specifications

WORKSTATIONS

Workstations are of modular starter and adder design, with an overall height 33". Workstations are available in 36", 48", 72", 96", and 108" widths. A knee-space panel located below the work surface supports all work surfaces greater than 48"W. Work surface height is at 27-1/2". Work surface depth is 27-1/2" with an additional 1-1/2"W cord drop between the work surface and back panel to allow passage of electrical cords. Work surface is attached to end and intermediate panels by means of two metal 22-1/2" long "Z" brackets with 5/16" – 18 hex-head bolts engaging internally and externally threaded bushings embedded into panels. The back panel is attached to end and intermediate panels using hidden metal keyways and shoulder screws. The shelf is attached to end and intermediate panels and back panels with 1" x 1" steel, black painted angle brackets and black #8 screws.

WORK SURFACE

Standard work surface is 1-3/16" thick, 3-ply, 45# density particleboard including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a low-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Front edges of work surfaces have a 1-3/4" thick x 2"W solid oak external undercut chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled at a 39° angle with 3/8" radius bullnosed at the leading edge. The back edge of the top has a black plastic strip 1-1/2"W which projects above the work surface 1/4" to act as a retainer.

END AND INTERMEDIATE PANELS

End and intermediate panels are 1-1/8" thick, 45# density particleboard core with select face veneers of Northern-grown red oak. The end panels on starter units receive the Chancellor's Collection veneer sketch face pattern on the outside face surface. These end panels also have the Chancellor's Collection solid red oak top edge cap. This wood cap measures 2-5/16"W x 1-1/4" thick and has a 3/8" radius on all four of the top edges. These edges also bevel downward at a 60° angle. All other edges are banded with a 1.6mm oak veneer band. Intermediate panels receive a 3" diameter grommet below the work surface to allow passage of electrical and data wires. Each panel receives two 1-1/4" adjustable glides.

BACK PANEL

Back panel is 3/4" thick, 45# density particleboard core with face veneers of select Northern-grown red oak. The top and bottom edges of the back panel receives 1.66mm veneer solid oak edge bands. Back panels attach to end and intermediate panels by means of recessed metal fasteners and shoulder screws. The back panel on double-faced units receive a 3" diameter grommet located below the work surface to allow passage of electrical and data wires.

SHELF

Shelf is 3/4" thick x 8"D 45# density particleboard core with face veneers of select Northern-grown red oak. Shelf is banded on the front edge with a 1.6mm solid oak band. Shelf attaches to end and intermediate panels by means of a pair of metal "L" brackets. Back corners of shelf have a 3" x 3" cutout to allow for the passage of electrical cords. The shelf is positioned 10" below the bottom of the work surface.

WIRE MANAGEMENT DOOR

The wire management door is positioned between the bottom of the work surface and the shelf and is designed to form a concealed wire management channel 8-1/2"H x 9-1/2"D. The door is 1/4" thick with select oak face veneers. The door slides in two aluminum tracks, one that is attached to the bottom of the work surface while the other is attached to the top of the shelf.

KNEE-SPACE PANEL

All 72" and 96"W workstations, as well as functional corner units, have a knee-space panel positioned under the work surface for additional work-surface support. Units 108"W have two knee-space panels. The knee-space panel is 1-1/8" thick, 45# density particleboard core with select face veneers of Northern-grown red oak. The panel is banded on exposed edges with a 1.6mm solid oak band. The knee-space panel is attached to the back panel using a 1-3/4" square, solid-oak post, grooved to receive the knee space panel and back panels. Panels attach to the post using recessed metal fasteners and shoulder screws. The knee-space panel is angled in the back to create a space to allow passage of electrical and data cords. The knee-space panel receives two 1-1/4" diameter black adjustable glides.

General Specifications

STATION TOP

Each top is 46-3/4"W at the front, tapering to 21-3/16" at the rear. **Tops are 28-3/4"D. A 1-1/2"W cord drop runs the width of the station** between the top and back panel to allow passage of electrical and data cords. Station tops are 1-3/16" thick, 45# density particleboard core including a top surface of .050" thick, high-pressure laminate and a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a low-glare finish resistant to scratches, fading, and staining in accordance with NEMA standards. The front edge of the top is banded with a 1-3/4" thick x 2"W solid-oak external undercut chamfered edge band laminated to the work surface core after lamination of the face plastic. **The edge band is beveled to a 3/8" radius bullnose at the leading edge. Bevel is at a 39° angle.**

END AND INTERMEDIATE PANELS

End and intermediate panels are 1-3/16" thick, 45# density particleboard core. Veneer on both faces of the panels is sketched to form a framed appearance. The "frame" is composed of 3-1/4" rift-cut, oak-veneer strips along both vertical edges and a 3-1/4" solid wood plinth at the bottom edge. At the top edge is a 3-1/4" rift-cut oak veneer strip shaped to form a 1-1/2"H internal arc. Within the frame is select plain-sliced, slip-matched ash veneer. The vertical edges of the end panel receives a 1.6mm solid-oak external edge band. The top edge of the panel receives a 2-1/4"W x 1-1/4"H solid-oak top cap. The top cap is 1-3/16"W at the bottom sloping outward on both sides at a 30° angle. **Both the front and back edges of the top cap receive a 3/8" radius. Each panel has two 1-1/4" diameter chrome adjustable glides with solid plinth.**

ELECTRICAL ACCESS DOOR (One for each 3- or 6- station unit)

Access door is 3/4" thick, comprised of select face veneers of Northern-grown red oak over a particleboard core. Panel is externally banded on all four sides with a 1.6mm thick solid-oak edge band. Door has a full-length hinge and a lock. Access door is located on one back panel, which can be located anywhere in the PAC station.

BACK PANEL

The back panel is 1-3/16" thick, 3-ply 45# density particleboard core with select plain-sliced, slip-matched oak veneer on both faces. The panel is internally banded with 1.6mm thick solid oak on both the bottom edge and the top edge. Back panels are attached to end and intermediate panels using hidden metal keyways and shoulder screws. Back panels have a 3" diameter grommets egress for electrical cords to pass to the center hub of half-hexagon or full-hexagon station configuration.

SHELVES

Shelves are 3/4" thick, select oak-veneered 45# density particleboard with a 5/8" thick x 1-3/4"H solid-oak front edge band.

CENTER CAP

The center cap is 3/4" thick, 45# density particleboard, with high-pressure laminate to match the tops, and shaped to enclose half-hexagon and full-hexagon station configurations.

WORKING SPACE

The working space is adjustable to: Standing Height 39", ADA Height 32" and Sitting Height 27".

General Specifications

TOPS

Tops are 1-3/16" thick, 3-ply 45# density particleboard including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick. Front edges are externally banded with a 1-3/16" thick x 1"W solid-oak undercut chamfered edge band applied to top core after lamination of the face plastic. The edge band is beveled at a 39° angle with a 3/8" radius bullnose at the leading edge. The back and side edges of top are straight and externally banded with a 1/4" thick oak band. Tops slope at an 8° angle. A 5/8" x 5/8" solid-oak book retainer strip is fastened to the top surface at the front of the sloped top.

END PANELS

End panels are 1-3/16" thick select, plain-sliced, oak-veneered 45# density particleboard. The inside face of end panels is select plain-sliced, slip-matched oak veneer. Veneer on the outside face of end panels is sketched to form a "framed" appearance. The "frame" is composed of 3-1/4" rift-cut, oak veneer strips along both vertical edges and a 3-1/4" solid wood plinth at the bottom edge. At the top edge is a 3-1/4" rift-cut oak veneer strip shaped to form a 1-1/2"W internal arc. Within the frame is select plain-sliced, slip-matched ash veneer. The vertical edges of the end panel receive a 1.6mm solid oak external edge band. Each panel has two 1-1/4" diameter chrome adjustable glides.

BACK PANEL

The back panel is 3/4" thick select, plain-sliced, oak-veneered 45# density particleboard banded on the bottom.

DICTIONARY STAND SHELVES

Dictionary stands have one adjustable and one fixed base shelf. Shelves are 3/4" thick, oak-veneered plywood having a 1.6mm veneer edge band.

ATLAS STAND SHELVES

Atlas stands have five pullout shelves. Pullout shelves are 3/4" thick, oak-veneered plywood. Front edges of each shelf have a 2-1/4" x 3/4" solid-oak hardwood fascia. Shelves operate on metal slides with nylon rollers. Each shelf has an automatic shelf stop to prevent accidental removal.

Note: Edge Band on long side only. Tops are designed to be inset between end panels. If edge bands are desired on short edges, please enter the part as a modification and specify which bands to be included.

To ensure that tops for steel shelving work with each manufacturer and top method, please specify the exact width and depth of tops. Add 15% for HPL on top and bottom (Steel Shelving ONLY).

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

END PANELS: STEEL SHELVING

End panels are 1-3/16" thick, 3-ply 45# density particleboard core with select plain-sliced, slip-matched oak veneer on the inside face. Oak veneer on outside face of end panels is sketched to form a "framed" appearance. The "frame" is composed of 3-1/4" rift-cut, oak-veneer strips along both vertical edges and a 3-1/4" solid wood plinth at the bottom edge. At the top edge is a 3-1/4" rift-cut oak veneer strip shaped to form a 1-1/2"H internal arc. Within the frame is select plain-sliced, slip-matched ash veneer. The vertical edges of the end panel receives a 1.6mm solid oak external edge band. The top edge of the panel receives

a 1-3/4"W x 1-1/4"H solid oak top cap. The top cap is 1-3/16"W at the bottom sloping outward at a 30° angle. Both ends of the top cap receive a 3/8" radius. The vertical edges of the end panel receive a 1.6mm solid-oak external edge band. All panel edges are eased. Exact height and depth of panel must be specified when ordering. End panels are not machined. No fastening hardware is provided with end panels.

Note: Please use the part number below and specify exact sizes of end panels and whether continuous tops are to be "inset" (between the panels) or overhung out over the panels.

						Double-Faced End Panels			

Note: Heights noted do NOT include the top cap. End panels that are to have continuous tops overhung will NOT receive a top cap.

Please specify Wood Finish (Table 1). Details can be found on page GEN 4.

General Specifications

CHAIR FRAME

The end frames are constructed of legs that are 1-1/4" thick x 2-1/2"W, and a top arm rail that is 1" thick by 2-1/2"W. All parts are constructed from solid oak. All joints are mortised, tenoned, and glued to form a solid unit. Within the end frame is a 1" thick, 45# density particleboard core, veneered panel. The panel is flush to the inside of the end frame leaving a 1/4" inset reveal on the outside face of the frame. The inside face of the end panel receives select plain-sliced, slip-matched oak veneer. The veneer on the outside face of the panel is sketched to form a "framed" appearance. The frame is composed of a horizontal 2-1/2" rift-cut, oak-veneer strip along the bottom edge of the panel, and a horizontal 3-1/4"W rift-cut oak-veneer strip along the top edge, shaped to form a 1-1/2"H internal arc. The solid oak legs of the end frames form the vertical sides of the "frame". Within the frame is select plain-sliced, slip-matched ash veneer. The front stretcher and front seat rail are 3"W x 1" thick solid red oak. The back seat rail is 2-3/4"W x 1" thick solid red oak. The cross stretcher and seat rails are mortised, tenoned, and glued into the side frames.

UPHOLSTERED SEAT AND BACK

The seat and back frame are a single piece of 3/4" bent plywood. The seat portion is fitted with a Dimatrol Webbing and then covered with black cambric fabric for comfort. This is then covered with 3-1/2" foam, which is also used on the chair back. The entire seat and back assembly is covered with the specified upholstery fabric except for the underside of the seat which is covered with a black cambric fabric. Brodart upholstery materials meet requirements of the following fire codes: Calif. Technical Bulletin #117 (sec. E part 1); CS-191-53 class 1. Fabrics which meet Calif. Technical Bulletin #133 are available.

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply, 45# density particleboard core with a .050" high-pressure laminate face and a .020" thick backing sheet on the underside. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining in accordance with NEMA standards. Tabletops are banded on exposed edges with a 1-3/4" thick x 2"W solid-oak external undercut chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled at a 39° angle with a 3/8" radius bullnose at the leading edge. Square and rectangular tabletop edge bands are mitered at all four corners and corners radiused 1/8".

TABLE LEGS

Table legs are 2-1/2"W, square shape, glued up face to face from three solid-oak blanks. All glue joints are tight and smooth. All vertical edges receive a 1/4" radius. Legs receive a horizontal vein line 5/32"W x 3/32"D on the two outside faces of the leg positioned 3-11/32" below the top of the legs. This vein line matches the horizontal vein line on the apron. An identical vein line is positioned 3-1/4" above the bottom of the leg. At the bottom of this vein line the two back sides of the leg taper to a dimension of 1-7/8" x 1-7/8" at the bottom of the leg. Legs receive a 1-1/2" diameter adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a countersunk boring which accepts the upper two-thirds of the glide. Table is an apron design with a 3-1/2" x 1" thick apron screwed to the underside of the tabletop. A 5/32"W x 3/32"D vein line is positioned at the bottom front surface of the apron to mirror the top horizontal vein line on the table leg. The legs attach to the aprons by means of formed 14-gauge steel corner brackets. Each leg is bolted to the corner bracket with two 5/16" - 18 hex-head bolts which pass through the bracket and engage threaded bushings embedded into the leg and cross-pinned with a 3/16" diameter steel pin.

General Specifications

DESKTOP

Standard desktops are 1-3/16" thick 3-ply, 45# density, particleboard core, with a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Tops receive a 2"W x 1-3/4" T solid Northern-grown hard maple edge band on the patron side, and edges beveled down at a 20° angle with a 1/2" radius at the leading edge forming a bullnose shape. A 1/4" thick, solid Northern-grown hard maple edge band is applied to the remaining three sides, with top and bottom edges radiused to 1/8". All edges are applied to the desktop after the top and bottom laminate sheets are applied, constituting an external edge band. Desktops are positioned over the end panels of the desk module, flush with the outside edges of the end panels.

UPRIGHT UNIT PANELS

Desk module end panels are 1" thick, 3-ply, 45# density particleboard core with select plain-sliced maple veneers on both sides. Exposed edges are externally banded with a 1" x 1/16" thick, solid Northern-grown maple edge band. The end panels and front panel are joined and secured with 3/4" x 3/4" thick solid hardwood cleats screwed to the inside surfaces of the panels. The bottom of each end panel receives two adjustable glides to allow leveling of the individual units. Each end panel receives a 3" diameter egress and grommet to provide for wire passage.

FRONT PANELS

The front panel is 3/4" thick, comprised of the select plain-sliced face veneers of Northern-grown maple over a 45# density particleboard core. Exposed edges are externally banded with a 3/4" x 1.6 mm thick, solid Northern-grown maple edge band. The front incorporates a 6"H x 3/4"D recessed, ebonized, toe space at the bottom of the panel. The front panel is positioned over the end panels of the desk module, flush with the outside edges of the end panels. Doublewide units have two front panels to give the appearance of two individual units, for a uniform look.

OFFSET RESIN PANEL FRONT DESIGN

A tinted, 1/4" thick resin panel accent is attached to the front panels 12"H. Single units have one resin panel accent, while double and square corner units have two. The resin panel is held back 1" from each end of the unit. A 2-1/2" diameter x 1/2" thick metal cap nut is used to bolt the resin panel to the front panel, a felt or rubber washer is used against both surfaces of the resin panel, and loc-tite is used on the bolt to keep the cap nut from turning after positioned. The cap nuts are centered in 3-1/2" from the end of the resin panel and down 3" and 4-1/2". There are four cap nuts on each piece of resin panel (Also see tinted resin panel specifications). The cap nuts are chrome plated or powder-coated as specified (see chrome specifications).

CHROME/POWDER COAT DESIGN

A steel bar 1/4" thick x 1-1/4"W is recessed 3/16"D down 3-5/16" from the top of the front panel and run from the left edge to the right edge, and 1-1/2" down from the bottom of this bar a second bar is recessed 3/16"D into the front panel. This second bar is like the first bar except it has a 6" x 1-1/4" x 1/4" protrusion, centered and welded in place and pointing down when placed on the front. Each bar is glued in place so it cannot be removed. The bars are either chrome plated or power-coated as specified. (See chrome specifications).

ADJUSTABLE WORK SURFACE

Work surfaces are 1-3/16" thick, 3-ply particleboard core, including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards.

The exposed edge receives a 5/8" thick solid Northern-grown red oak internal edge band in a straight design. The back of the work surface has a black plastic band 1-1/2"W, which projects above the work surface 1/4" to act as a retainer. The work surface is 24-1/2"D and is positioned 1-1/2" away from the front panel, creating a cord drop space. Adjustable work surfaces are available in single wide standing height desks. Work surfaces in standing-height desks (catalog number 73-012) may be positioned at heights of 36", 32", or 27".

CHROME PLATING SPECIFICATION

Where "chrome plated" is specified, Brodart uses a decorative chromium electro-plated finish, which protects against tarnish and minimizes scratching.

Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

OFFSET RESIN PANEL SPECIFICATIONS

Unless otherwise specified all offset resin panels are 1/4" thick. The customer must specify the tint color that they require from those offered by Brodart.

The offset resin panel is held in place by 1/4" thick solid wood maple molding on both sides of the resin which is sanded flush with the panel surfaces.

Epoch Series Edge

General Specifications

SHELVES

Shelves are constructed of 7-ply, furniture grade hardwood veneer-core plywood, with plain-sliced maple face veneer. Exposed edges receive a 1/4" thick, solid maple edge band.

DRAWERS

Drawers are constructed of solid hardwood with a 1/4" thick wood bottom panel. Drawers have 3-ply particleboard fronts with select maple face veneer. Box drawers have extension slides with 100# load capacity. File drawers have full-extension slides with 100# load capacity.

DESK DIMENSIONS

Standing-Height Desk, overall: 39-3/16"H x 35"W x 31-3/8"D or 39-3/16"H x 70"W x 31-3/8"D.

Sitting-Height Desk, overall: 32-3/16"H x 35"W x 31-3/8"D or 32-3/16"H x 70"W x 31-3/8"D.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply 45# density particleboard core or with a .050" high-pressure laminate with a .020" thick phenolic backing sheet on the underside. High-pressure laminate has a low-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. Tabletops are banded on exposed edges with a 1-3/4" thick x 2" wide solid maple external chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled down at a 20° angle with a 1/2" radius bullnose at the leading edge. Square and rectangular tabletop edge bands are mitered at all four corners and corners radiused 1/8".

LEGS (CHROME)

Legs are 2-1/2" round, 16-gauge steel tubing. The table is without an apron, with legs attached to the tabletop by a 5" square x 5/16" thick steel plate. Leg and plate are painted or plated to match the leg (see chrome specifications) and have no sharp edges. The plate is attached to the leg by a 9" x 3" x 3/8" steel angle bracket placed at a 45° angle. The steel angle bracket receives two cutout designs replicating the edge band profile. The bracket is attached to the leg plate and leg using metal to metal fasteners. The leg plate is attached to the tabletop by (5) 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the extended edge band. Edge band extends 1/2" below the tabletop. Each leg has 2-1/2"D x 1"H adjustable glide mounted into a recessed threaded insert.

LEG (WIRE MANAGEMENT)

A 1/2" wide slot is located in the back of the leg underneath the angle support bracket, 5/8" down from the top of the leg to within 3-3/8" of the bottom of the leg. To insert cords, a snap on slot cover of 1/8" bent metal and finished to match the leg is supplied to snap on after the cord is put into the slot. The snap on cover allows for a 1" egress at the top and bottom of the slot for cords.

CHROME PLATING SPECIFICATION

Where chrome plated is specified, Brodart uses a decorative chromium electro-plated finish that protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply 45# density particleboard core or with a .050" high-pressure laminate face a .020" thick phenolic backing sheet on the underside. High-pressure laminate has a low-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. Tabletops are banded on exposed edges with a 2" wide x 1-3/4" thick solid maple external chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled down at a 20° angle with a 1/2" radius bullnose at the leading edge. Square and rectangular tabletop edge bands are mitered and receive 1/8" radius on all corners.

LEGS (POWDER-COATED)

Legs are 2-1/2" round, 16-gauge steel tubing. The table is without an apron, with legs attached to the tabletop by a 5" square x 5/16" thick steel plate. Legs and plates are electrostatic powder-coat painted and have no sharp edges. The plate attaches to the leg by a 9" x 3" x 3/8" steel angle bracket placed at a 45° angle. The steel angle bracket receives two cutout designs replicating the edge band profile. The steel bracket is attached to the leg plate and leg using metal to metal fasteners. The strap may be electrostatic powder-coat painted or chrome plated. The leg plate is attached to the tabletop by (5) 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind, and hidden by the extended edge band. Edge band extends 1/2" below the tabletop. Each leg has 2-1/2"D x 1"H adjustable glide mounted into a recessed threaded insert.

LEG (WIRE MANAGEMENT)

A 1/2" wide slot is located in the back of the leg underneath the angle support bracket, 5/8" down from the top of the leg to within 3-3/8" of the bottom of the leg. To insert cords, a snap on slot cover of 1/8" bent metal and finished to match the leg is supplied to snap on after the cord is put into the slot. The snap on cover allows for a 1" egress at the top and bottom of the slot for cords.

CHROME PLATING SPECIFICATION

Where chrome plated is specified, Brodart uses a decorative chromium electro-plated finish that protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply 45# density particleboard core or lumbercore with a .050" high-pressure laminate face a .020" thick phenolic backing sheet on the underside. High-pressure laminate has a low-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. Tabletops are banded on exposed edges with a 2" wide x 1-3/4" thick solid maple external chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled down at a 20° angle with a 1/2" radius bullnose at the leading edge. Square and rectangular tabletop edge bands are mitered and receive 1/8" radius on all corners.

LEGS (WOOD)

Legs are 2-1/2" round wood. The table is without an apron, with legs attached to the tabletop by a 5" square x 5/16" thick steel plate. Plates are electrostatic powder coat painted and have no sharp edges. The plate attaches to the leg by a 9" x 3" x 3/8" steel angle bracket placed at a 45° angle. The steel angle bracket receives two cutout designs replicating the edge band profile. The steel bracket is attached to the leg plate and leg using metal to metal fasteners. The strap may be electrostatic powder-coat painted or chrome plated. The leg plate is attached to the tabletop by (5) 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind, and hidden by the extended edge band. Edge band extends 1/2" below the tabletop. Each leg has 2-1/2"D x 1"H adjustable glide mounted into a recessed threaded insert.

LEG (WIRE MANAGEMENT)

A 1/2" wide slot is located in the back of the leg underneath the angle support bracket, 5/8" down from the top of the leg to within 3-3/8" of the bottom of the leg. To insert cords, a snap on slot cover of 1/8" bent metal and finished to match the leg is supplied to snap on after the cord is put into the slot. The snap on cover allows for a 1" egress at the top and bottom of the slot for cords.

CHROME PLATING SPECIFICATION

Where chrome plated is specified, Brodart uses a decorative chromium electro-plated finish that protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

Details can be found on pages GEN 4 and GEN 5.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply 45# density particleboard core with a .050" high-pressure laminate face and a .020" thick backing sheet on the underside. High-pressure laminate has a low-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. Tabletops are banded on exposed edges with a 1-3/4" thick x 2"W solid-maple external undercut chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled down at a 20° angle with a 1/2" radius bullnose at the leading edge. Square and rectangular tabletop edge bands are mitered on all corners and receive a 1/8" radius.

LEGS (CHROME)

Legs are 2-1/2" round, 16-gauge steel tubing. The table is without an apron, with legs attached to the tabletop by a 5" square x 5/16" thick steel plate. Leg and plate are painted or plated to match the leg (see chrome specifications) and have no sharp edges. The plate is attached to the leg by a 9" x 3" x 3/8" steel angle bracket placed at a 45° angle. The steel angle bracket receives two cutout designs replicating the edge band profile. The bracket is attached to the leg plate and leg using metal to metal fasteners. The leg plate is attached to the tabletop by (5) 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the extended edge band. Edge band extends 1/2" below the tabletop. Each leg has 2-1/2"D x 1"H adjustable glide mounted into a recessed threaded insert.

LEGS (POWDER-COATED)

Legs are 2-1/2" round, 16-gauge steel tubing. The table is without an apron, with legs attached to the tabletop by a 5" square x 5/16" thick steel plate. Legs and plates are electrostatic powder-coat painted and have no sharp edges. The plate attaches to the leg by a 9" x 3" x 3/8" steel angle bracket placed at a 45° angle. The steel angle bracket receives two cutout designs replicating the edge band profile. The steel bracket is attached to the leg plate and leg using metal to metal fasteners. The strap may be electrostatic powder-coat painted or chrome plated. The leg plate is attached to the tabletop by (5) 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind, and hidden by the extended edge band. Edge band extends 1/2" below the tabletop. Each leg has 2-1/2"D x 1"H adjustable glide mounted into a recessed threaded insert.

PRIVACY PANEL

Privacy panels are 10"H, constructed of 1" thick, 9-ply hardwood veneer-core plywood. Exposed panel edges are banded with 1.6mm solid maple. The privacy panel attaches securely to the tabletop by screws passing through the tabletop and into the privacy panels. Privacy panel is finished to match the table edge band. Privacy panel is designed to hide computer wires and to eliminate incidental tampering.

ELECTRICAL

Tables have 3" grommets for wire passage and J-channel wire managers mounted under the table to hold excess wires. Grommets are ABS, black plastic, with notched removable cap. J-channel wire managers are 18-gauge steel with electrostatic applied black powder-coat paint.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply 45# density particleboard, with a .050" thick high-pressure laminate top surface and a .020" thick backing sheet for balanced construction. Top receives a 2" x 1-3/4" thick external solid drop edge band of Northern-grown Red Oak or maple. Edge band is beveled down at a 20° angle with a 1/2" bullnose leading edge. Square and rectangular tabletop edge bands are mitered at all four corners and radius 1/8".

LEG (METAL)

Legs are 2-1/2" round 16-gauge cold-rolled steel tubing. Legs receive a 9" x 3" x 1/2" cold-rolled steel angle bracket placed at a 45° angle that is attached to a 5" square x 5/16" thick cold-rolled steel plate for connection to the tabletop. Legs are attached to the leg plate and bracket using metal to metal fasteners. The steel angle bracket receives two cutout designs replicating the edge band profile. The leg plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internal and external threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the drop edge band. Edge band extends 1/2" below the tabletop. Each leg receives a 2-1/2"D x 1"H adjustable glide mounted in a recessed threaded insert. Leg and plate are painted or plated to match (see chrome specifications) and have no sharp edges.

LEG (WOOD)

Legs are 2-1/2" round, glued up solid Northern-grown Red Oak or maple. Legs receive a 9" x 3" x 1/2" cold-rolled steel angle bracket placed at a 45° angle that is attached to a 5" square x 5/16" thick cold-rolled steel plate for connection to the tabletop. Legs are attached to the leg plate and bracket using metal to metal fasteners. The steel angle bracket receives two cutout designs replicating the edge band profile. The leg plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internal and external threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the drop edge band. Edge band extends 1/2" below the tabletop. Each leg receives a 2-1/2"D x 1"H adjustable glide mounted in a recessed threaded insert. Leg and plate are painted or plated to match (see chrome specifications) and have no sharp edges.

Note: Angle Bracket and Glide can be individually chrome plated (see chrome specifications) or painted any of Brodart's powder-coat paints as specified.

LEG (WIRE MANAGEMENT)

When specified, a wire management leg will be provided. This leg has a 1/2" wide slot located in the back of the leg underneath the angle support bracket, 3/8" down from the top of the leg and 3-3/8" from the bottom of the leg. A spring loaded cover of 1/8" bent metal and finished to match the leg is _____. The cover allows for a 1" egress at the top and bottom of the slot for cords.

CHROME PLATING SPECIFICATION

Where chrome plating is specified, Brodart provides a decorative chrome electro-plated finish that protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture-grade finish.

Note: For electrical and wire management options for the products listed above, please refer to the Electrical Accessories section of this price list.

Please specify Wood Finish (Table 1), High-Pressure Laminate (Table 2) and Metal Color; if applicable (Table 3). Details can be found on pages GEN 4 and GEN 5.

General Specifications

TABLETOPS

Table tops are 1-3/16" thick, 3-ply 45# density particleboard, with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides. Top receives a 2" x 1-3/4" thick external drop edge band of solid Northern-grown Red Oak or Maple. The band is beveled down at a 20° angle with a 1/2" bullnose leading edge. Square and rectangular tabletop edge bands are mitered at all four corners and radius 1/8".

Note: Tops for tables 96" and smaller will receive the grain of the veneer running in the "long" direction. Tops for tables 96" and longer will receive the grain running in the "short" direction.

BASE – WOOD

The base consists of a top and bottom horizontal stretcher connected by a vertical panel. The top and bottom horizontal pieces will be solid Northern-grown Red Oak or Maple. The vertical panel will be 1-3/16" thick, 3-ply 45# density particleboard, with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides. The upper horizontal part of the each base will receive borings for attaching the assembly to the table top. The lower horizontal piece will receive a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut which is further recessed into the leg by means of a counter-sink boring which accepts the upper two-thirds of the glide. Table tops are attached to base by bolting through the upper horizontal members of base into internal and external threaded bushings embedded in the underside of the table top.

The assembled base components will connect to each other via two horizontal rails. Rails will be constructed of 1-3/16" thick, 3-ply 45# density particleboard, with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides and attach to base and also provide support for the tabletop.

BASE – WOOD & METAL

The wood and metal base construction is the same as the standard wood base with the addition of two 2-1/2" round 16-gauge cold-rolled steel tubing fitted between the pedestal top and bottom rails. Tubing will be Legs will be finished with electrostatic applied epoxy powder-coat paint.

General Specifications

WORKSTATIONS

Workstations are designed in a modular starter/adder configuration and available in single or double-face system. The workstation top is 36" or 47-5/8"W x 28-1/2"D. A 1-1/2"W cord drop runs the width of the carrel between work surface and back panel to allow passage of electrical cords. The workstation support shelf is 8"D. End and intermediate panels are 47-1/2"H and 33-1/8"D. The work surface attaches to end and intermediate panel by (2) metal "Z" brackets with 5/16" - 18 hex-head bolts engaging internally and externally threaded bushings embedded into panels. The back panel is attached to end and intermediate panel using hidden metal keyway attachments. The workstation support shelf is attached to end, intermediate and back panels with 3/4" x 3/4" black steel angle brackets and black #8 screws.

WORKSTATION TOP

The workstation top is 1-3/16" thick, 45# density particleboard core with a top surface of .050" thick high-pressure laminate and .020" thick phenolic backing sheet for balanced construction. High-pressure laminate has a low-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. The exposed edge is banded with a 2"W x 1-3/4" thick solid hard maple external chamfered edge band laminated to the work surface core after lamination of the face plastic. The edge band is beveled at a 20° angle with a 1/2" radius bullnose at the leading edge. The back edge of the top has a black plastic strap 1-1/2"W that projects above the work surface 1/4" to act as a retainer. All work surfaces are 29"H.

END AND INTERMEDIATE PANELS

End and intermediate panels are 1-3/16" thick, 3-ply 45# particleboard core select plain-sliced, slip-matched maple veneer. Vertical and top edges of the end and intermediate panel have 1.6mm thick maple edge band. Each panel has two 1-1/4" diameter chrome adjustable glides. Starter end panels have an arched window inserted 3-1/4" down from the center of the top edge of the panel. The 3-form is 4"H x 16"W and is held in place with 1/4" thick maple molding on both sides of the window (see window specifications). The molding is sanded flush with the panel surfaces. End panels have a 1/4" x 1/4" x 3/16" square rod embedded 4" up from the bottom edge. The square rod can be chrome plated or powder coated as ordered (see chrome specs).

BACK PANEL

The back panel is 3/4" thick 3-ply 45# density particleboard core with plain-sliced slip matched maple veneer on both faces. The top and bottom edges have 1.6mm maple edge banding. The back panel is attached the end or intermediate panel using metal keyway attachments.

WORKSTATION SUPPORT SHELF

The workstation support is 3/4" thick, 45# density particleboard core with select AA slip-matched maple veneer. The support has a 3/4" thick solid maple external band on the exposed edge. The support is located under the work surface and extends the full width of the workstation.

CHROME PLATING SPECIFICATION

Where "chrome plated" is specified, Brodart provides a decorative chromium electro-plated finish that protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

WINDOW SPECIFICATIONS

Unless otherwise specified all resin window panels are 1/4" thick. Customers must specify the color they require from those offered by Brodart. The resin window is held in place by 1/4" thick solid wood maple molding, on both sides of the window. The molding is sanded flush with the panel surfaces.

General Specifications

WORKSTATIONS

Workstations are of modular starter and adder design, with overall height 37". Workstations are available in 36", 48", 72", 96" and 108" width. A knee-space panel located below the work surface supports all work surfaces greater than 48"W. Work surface height is 27-1/2". Work surface depth is 27-3/16" with an additional 1-1/2"W cord drop between the work surface and back panel to allow passage of electrical cords. Work surface is attached to end and intermediate panels by means of two metal 22-1/2" long "Z" brackets with 5/16" - 18 hex-head bolts engaging internally and externally threaded bushings embedded in the panels. The back panel is attached to end and intermediate panels using hidden metal keyways and shoulder screws. The shelf is attached to end and intermediate panels and back panels with 3/4" x 3/4" steel, black-painted angle brackets and black #8 screws.

WORK SURFACE

Standard work surface is 1-3/16" thick, 3-ply, 45# density particleboard, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thickness for balanced construction. High-pressure laminate has a low-glare finish resistant to scratches, fading, staining, etc. High-pressure laminate meets or exceeds NEMA standards. Front edge of work surface has a 2" x 1-3/4" solid maple edge band in a beveled bullnose shape, the same as the reading tables. The back edge of the top has a black plastic strap 1-1/2"W that projects above the work surface 1/4" to act as a retainer.

END AND INTERMEDIATE PANELS

End and intermediate panels are 1-3/16" thick, 45# density particleboard core with select face veneers of maple. All edges are banded with a 1.6mm edge band. The end panels have an accent window 8-1/2"W x 3-3/4"H (see window specs). They have a 1/4" x 1/4" square rod embedded 3/16"D up 4" from the bottom edge and chrome plated or powder coated as ordered (see chrome specs). Intermediate panels have a 3" diameter grommet below the work surface to allow passage of electrical and data wires. Each panel has two 1-1/4" adjustable glides.

BACK PANEL

Back panel is 3/4" thick, 45# density particleboard core with face veneers of select maple. The top and bottom edges of the back panel have 1.6mm thick solid maple edge bands. Back panels attach to end and intermediate panels by recessed metal fasteners and shoulder screws. The back panel on double-faced units has a 3" diameter grommet below the work surface to allow passage of electrical and data wires.

SHELF

Shelf is 3/4" thick x 8" D 45# density particleboard core with face veneers of select maple. Shelf is banded on the front edge with a 1.6 mm solid maple band. It attaches to end and intermediate panels by a pair of metal "L" brackets. Back corners of shelf have a 3" x 3" cutout to allow for the passage of electrical cords. The shelf is positioned 10" below the bottom of the work surface.

WIRE MANAGEMENT DOOR

The wire management door, positioned between the bottom of the work surface and the shelf, is designed to form a concealed wire management channel 8-1/2" H x 9-1/2" D. The door is 1/4" thick with select maple face veneers. The door slides in two aluminum tracks, one attaches to the bottom of the work surface while the other attaches to the top of the shelf.

KNEE-SPACE PANEL

All 72" and 96" W workstations, as well as functional corner units, have a knee-space panel under the work surface for additional work surface support. Units 108" W have two knee-space panels. The knee-space panel is 1-3/16" thick, 45# density particleboard core with select face veneers of maple. It is banded on exposed edges with a 1.6 mm solid maple band. The knee-space panel attaches to the back panel using a 1-3/4" square, solid maple post, grooved to receive the knee-space panel and back panels. Panels attach to the post using recessed metal fasteners and shoulder screws. The knee-space panel is angled in the back to create a space to allow passage of electrical and data cords. The knee-space panel has two 1-1/4" diameter black adjustable glides.

CHROME PLATING SPECIFICATION

Where "chrome plated" is specified, Brodart uses a decorative chromium electro-plated finish that protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

WINDOW SPECIFICATIONS

Unless otherwise specified, all resin window panels are 1/4" thick resin material. Customers must specify the color they require from those offered by Brodart. The resin window is held in place by 1/4" thick solid wood maple molding, on both sides of the resin. The molding is sanded flush with the panel surfaces.

General Specifications

WORK SURFACE

Each work surface is constructed of durable particleboard, and has a high-pressure laminate face that creates a protective, low-glare finish resistant to scratches, fading, and staining. All work surfaces measure a spacious 62"W x 44-1/2"D with a 62" radius, and are 29"H. Two-position units have one top, and four-position units have two.

WORK SURFACE DIVIDER PANEL

Workstation divider panels are designed to provide semi-privacy and workspace definition. In a contemporary twist, all workstation divider panels feature an eye-catching window. Divider panels are made of sturdy, maple-veneered particleboard and measure 17-1/2"H x 42"W x 1-3/4" thick. Four-position units have two work surface divider panels.

WORK SURFACE BASE

All work surface bases measure 27-5/16"H and are made of two pieces of 3/4" maple-veneered particleboard with spacer, which brings the total thickness to 1-3/4". A 3" grommet hole is positioned in the upper rear corner of each panel, creating a convenient wire passage. Four-position units have two work surface bases.

END PANELS

End panels are made of durable, maple-veneered particleboard measuring 47"H. The veneer grain runs vertical on the end panels and all edges receive a 1.6mm thick maple band. In the four-position unit, 3" grommets in the panels are located under the work surface for a convenient wire passage.

CENTER POST

Workstation center posts measure 47-1/4"H x 2-1/4"W x 1-3/4" thick on two-position stations. Four-position center posts measure 47-1/4"H x 1-3/4"W x 1-3/4" thick. All posts are made of solid hard maple and have a 1/2" adjustable floor glide.

ELECTRICAL COMPONENTS

As standard equipment, two-position units have two Brodart model #73-200-S00 lift-up black electrical grommets, which include duplex outlets and data jack ports. Each component measures 6" x 4-1/2" and is located in the corner of each work surface. Four-position units have four lift-up grommets.

As standard equipment, the two- and four-position units have one #73-210-S00 2-1/4" diameter black flexible wire manager, which allows wires to be kept together and out of sight. The wire manager is easily movable, but is weighted at the bottom for secure positioning.

CHROME PLATING SPECIFICATION

Where "chrome plated" is specified, Brodart provides a decorative chromium electro-plated finish that protects against tarnish and minimizes scratching. The brilliance of the chrome plating enhances the overall look of the piece and creates a high-quality furniture grade finish.

WINDOW SPECIFICATIONS

Unless otherwise specified, all resin window panels are 1/4" thick, resin material. Customers may specify the preferred tint color from those offered by Brodart. Window panels are securely held in place by 1/4" thick solid wood maple molding on both sides.

General Specifications

STATION TOP

Each top is 47"W at the front, tapering to 21-3/16" at the rear. Tops are 28-1/2"D plus a 1-1/2"W cord drop runs the width of the station between the top and back panel to allow passage of electrical and data cords. Station tops are 1-3/16" thick, 45# density particleboard core including a top surface of .050" thick, high-pressure laminate and a backing sheet .020" thick, for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. The front edge of the top is banded with a 2" x 1-3/4"W solid maple external edge band glued to the work surface core after lamination of the face plastic. The edge band is beveled at 20° to a 1/2" radius bullnose at the leading edge.

VERTICAL PANELS

End and intermediate panels are 1-3/16" thick, 45# density particleboard core. Veneer on both faces of the panels are plain-sliced maple and slip matched. The vertical edges of the panel and top edge receive a 1.6mm edge band.

ELECTRICAL ACCESS DOOR

(One for each 3- or 6-station unit) Access door is 3/4" thick, comprised of select face veneers of maple over a particleboard core. Panel is externally banded on all four sides with a 1/4" thick solid maple edge band. Door have a full-length hinge and have a lock. Access door is located on one back panel, which can be located anywhere in the PAC station.

BACK PANEL

The back panel is 1-3/16" thick, 3-ply 45# density particle-board core with select plain-sliced, slip-matched maple veneer on both faces. The panel is externally banded with 1.6mm thick solid maple on both the bottom edge and the top edge.

Back panels are attached to end and intermediate panels using hidden metal keyways and shoulder screws. Back panels have a 3" diameter grommets egress for electrical cords to pass to the center hub of half-hexagon station configurations.

SHELVES

Shelves are 3/4" thick, select maple veneered 45# density particleboard having a 5/8" thick 1-3/4"H solid maple front edge band.

CENTER CAP

The center caps are 3/4" thick, 45# density particleboard, with high-pressure laminate to match the tops and shaped to enclose half-hexagon and full-hexagon station configurations.

WORKING SPACE

The working space is adjustable to: Standing Height 39", ADA Height 32" and Sitting Height 27".

----------------------------	----------------	----------------	---	------------------------------	-----	---------	---------

Please specify Wood Finish (Table 1), High-Pressure Laminate (Table 2) and Metal Color (Table 3). Details can be found on pages GEN 4 and GEN 5.

General Specifications

This unit consists of a C.P.U. cabinet, a work surface, end panels and monitor shield.

C.P.U. STORAGE CABINET

The C.P.U. storage cabinet is constructed of 3/4" maple veneer plywood, that matches the end panels. The cabinet is 22-1/4"H x 24"W x 23-1/2"D. Inside cabinet dimensions are 20"H x 22-1/2"W x 22"D. The front has two doors, that can be locked. The cabinet is attached to the underside of the work surface. The bottom of the cabinet has a 3" grommet in each rear corner for wire passage.

WORK SURFACE

The work surface is 1-3/16" thick, 3-ply 45# density particleboard core with .050" high-pressure laminate face and a .020" thick phenolic backing sheet on the underside. The high-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining in accordance with NEMA standards.

The front edge of the work surface an external maple edge band 2"W x 1-3/4" T to match the shape of the edge on the tables. The rear edge has an external 5/8"W x 1-5/8" T bullnose solid maple band. A 3" grommet centered 6" from the back edge allows wires and heat to escape the cabinet.

END PANELS

The end panels measure 48-5/32"H x 33-1/8"W x 1-3/16" thick and include 1/2"H leveling glides. The end panels are plain sliced, slip matched maple veneers on a particleboard core of 45# density. The edges receive 1.6mm thick maple bands with top and vertical edges bullnosed. The vertical edges are also tapered down 2° from top to bottom. The top edge is arched with a 47-3/8" radius. A resin panel window 3-3/4"H x 8-1/2"W is inserted 3-1/4" down from the center of the top edge (see Window Specifications). The resin is held in place with

1/4" thick maple molding on both sides of the window. The molding is sanded flush on both panel surfaces. A 1/4" x 1/4" x 3/16" chrome plated or powder-coat painted square steel rod is embedded 4" from the bottom edge of the panel.

MONITOR SHIELD

A monitor shield is bolted to the work surface 1-5/8" from the rear edge. It is 9"H x 18"W with a 9" radius shape. The material is 1/8" thick steel, black textured powder-coated.

CHROME PLATING SPECIFICATION

Where "chrome plated" is specified, Brodart uses a decorative chromium electro-plated finish that protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

WINDOW SPECIFICATIONS

Unless otherwise specified, all resin window panels are 1/4" thick. Customers must specify the tint color they require from those offered by Brodart. Resin is held in place by 1/4" thick solid wood maple molding, on both sides of the window. The molding is sanded flush with the panel surfaces.

Please specify Wood Finish (Table 1), High-Pressure Laminate (Table 2), Metal Color (Table 3) and Resin Option; if applicable (Table 6). Details can be found on pages GEN 4, GEN 5 and GEN 6.

General Specifications

TOP

The sloped top is 1-3/16" thick, 3-ply particleboard including a top surface of .050" thick high-pressure laminate, with a backing sheet not less than .020" thick. The back edge band is solid wood 1/4" thick and the front edge is 2" wide x 1-3/4" thick with the Epoch shape.

STAND

The back edge is internal and the front edge is external. A 5/8" x 5/8" solid wood book retainer strip is positioned at the front edge of the sloped top. The back, bottom, and shelf are 3/4" thick furniture grade plywood. The ends are 1-3/16" thick furniture-grade plywood with a bullnosed 5/8" thick edge on the top and vertical edges and 5/8" thick flat edge on the bottom edge. The bottom has adjustable floor glides. The vertical edges of the end panels angle out from the bottom at 92° the top edge has a 17-5/8" radius.

Toward the top center of each end panel is a resin window 9" x 3". The type of window is specified on the order, as many patterns and colors are available. A metal strip 1/4" x 1/4" is embedded 3/16" deep into the panel on the outside 4" up from the bottom edge. This strip is chrome or powder-coat as specified.

METAL "T" ACCENT

A 1-1/4" x 1/4" metal strip with a 6" center leg is embedded 3/16" deep across the panel towards the top and is chromed or powder-coated as specified.

SHELVES

There is one adjustable shelf that rests on 5/15-18 x 1" pins.

General Specifications

This spacious unit consists of a cabinet of 3/4" thick maple veneer plywood 51-3/16"H x 36-7/8"W x 28-7/16"D. It has a 3/4" thick maple veneer plywood back with five drawers for storage or display of DVD or CD cases. This unit has design end panels to match other pieces in the Epoch Series. Approximate capacity for CD's is 624 for 525 for DVD's.

DRAWERS

The drawers are constructed of 1/2" solid maple with a maple plywood bottom and front banded on all edges with 1.6mm solid maple. The grain direction runs vertically and the five drawer fronts are cut out of one sheet so that the grain all matches each other on each drawer front. The drawer bottom is cut to allow for five metal tracks with a metal follower block in each track to run from front to back of the drawer. This follower block is adjustable and holds the CD's and DVD's in an upright position. Each drawer to receive 100# load capacity full extension drawer slides. Each drawer receives two chrome drawer pulls for easy opening and closing. The unit has a mechanism that allows only one drawer to be open at a time so that the unit does not tip over.

END PANELS

End panels measure 51-3/16"H x 28-7/16"W x 1-3/16" thick with plain sliced slip matched hard maple veneers and 45# density particleboard core. The edges are banded with 1.6mm solid maple. The front and rear vertical edges taper down 2° from the top edge. The top edge is arched at a 52" radius. Down 3-3/4" from the top edge a window of resin is centered on the panel. The size of the window with molding is 29-1/4" vertically x 2-1/2"W. (See Window Specifications) a square 1/4" x 1/4" rod is inserted into the surface of the end panel 3/16"D and is chrome plated or powder-coated as specified by the owner. (See Chrome Plating Specifications).

CHROME PLATING SPECIFICATION

Where "chrome plated" is specified, Brodart uses a decorative chromium electro-plated finish, which protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

WINDOW SPECIFICATIONS

Unless otherwise specified all resin window panels are 1/4" thick. The customer must specify the resin color that they require from those offered by Brodart. The resin is held in place by 1/4" thick solid wood maple molding on both sides of the resin. The molding is sanded flush with the panel surfaces.

Note: Edge Band on long side only. Tops are designed to be inset between end panels. If edge bands are desired on short edges, please enter the part as a modification and specify which bands to be included.

To ensure that tops for steel shelving work with each manufacturer and top method, please specify the exact width and depth of tops. Add 15% for HPL on top and bottom (Steel Shelving ONLY).

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

END PANELS

End panels are 1-3/16" thick, 3-ply 45# density particleboard core with select plain-sliced, slip-matched maple veneer on the inside and outside face. The vertical edges and top edge of the end panel have a 1.6mm maple external edge band. All panel edges are eased. Exact height and depth of panel must be specified when ordering. End panels are not machined for fastening. No fastening hardware is provided with end panels.

Double-face end panels have an accent window 3-3/4"H x 8-1/2"W. They have a 1/4" x 1/4" square steel rod that is embedded 3/16"D up 4" from the bottom edge and be chrome plated or powder-coated as ordered (see chrome specs). Single-face panels do not receive the accent window.

CHROME PLATING SPECIFICATION

Where "chrome plated" is specified, Brodart uses a decorative chromium electro-plated finish that protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

WINDOW SPECIFICATIONS

Unless otherwise specified, all resin window panels are 1/4" thick. Customers must specify the tint color they require from those offered by Brodart. The resin is held in place by 1/4" thick solid wood maple molding on both sides of the resin. The molding is sanded flush with the panel surfaces.

Note: Exact height and depth of panel must be specified when ordering. Epoch style end panels cannot be used with continuous tops that are overhung (out over the panels).

Note: Heights noted are to the bottom of the curve on the top of the panel.

Note: Epoch style end panels cannot be used with continuous tops that are overhung (out over the panels).

Please specify Wood Finish (Table 1), Metal Color (Table 3) and Resin Option; if applicable (Table 6). Details can be found on pages GEN 4, GEN 5 and GEN 6.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply 45# density particleboard core or with a .050" high-pressure laminate with a .020" thick phenolic backing sheet on the underside. High-pressure laminate has a low-glare finish resistant to scratches, fading and staining in accordance with NEMA standards. Tabletops are banded on exposed edges with a 1-3/4" thick x 2" wide solid maple external chamfered edge band applied to the table core after lamination of the face plastic. The edge band is beveled down at a 20° angle with a 1/2" radius bullnose at the leading edge. Square and rectangular tabletop edge bands are mitered at all four corners and corners radiused 1/8".

TABLE LEG- (POWDER-COATED)

Legs are 2-1/2" round, 16-gauge steel tubing. The table is without an apron, with legs attached to the tabletop by a 5" square x 5/16" thick steel plate. Legs and plates are electrostatic powder-coat painted and have no sharp edges. The plate attaches to the leg by a 9" x 3" x 3/8" steel angle bracket placed at a 45° angle. The steel angle bracket receives two cutout designs replicating the edge band profile. The steel bracket is attached to the leg plate and leg using metal to metal fasteners. The strap may be electrostatic powder-coat painted or chrome plated. The leg plate is attached to the tabletop by (5) 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind, and hidden by the extended edge band. Edge band extends 1/2" below the tabletop. Each leg has 2-1/2"D x 1"H adjustable glide mounted into a recessed threaded insert.

TABLE LEG-(CHROME)

Legs are 2-1/2" round, 16-gauge steel tubing. The table is without an apron, with legs attached to the tabletop by a 5" square x 5/16" thick steel plate. Leg and plate are painted or plated to match the leg (see chrome specifications) and have no sharp edges. The plate is attached to the leg by a 9" x 3" x 3/8" steel angle bracket placed at a 45° angle. The steel angle bracket receives two cutout designs replicating the edge band profile. The bracket is attached to the leg plate and leg using metal to metal fasteners. The leg plate is attached to the tabletop by (5) 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind and hidden by the extended edge band. Edge band extends 1/2" below the tabletop. Each leg has 2-1/2"D x 1"H adjustable glide mounted into a recessed threaded insert.

TABLE LEG- (WOOD)

Legs are 2-1/2" round wood. The table is apronless design with legs attached to the tabletop by a 5" square x 5/16" thick steel plate. Plates are electrostatic powder coat painted and have no sharp edges. The plate attaches to the leg by a 9" x 3" x 3/8" steel angle bracket placed at a 45° angle. The steel angle bracket receives two cutout designs replicating the edge band profile. The steel bracket is attached to the leg plate and leg using metal to metal fasteners. The strap may be electrostatic powder-coat painted or chrome plated. The leg plate is attached to the tabletop by (5) 5/16" x 1" machine bolts engaging internally and externally threaded bushings embedded in the underside of the tabletop. Leg plates are positioned behind, and hidden by the extended edge band. Edge band extends 1/2" below the tabletop. Each leg has 2-1/2"D x 1"H adjustable glide mounted into a recessed threaded insert.

CHROME PLATING SPECIFICATION

Where chrome plated is specified, Brodart uses a decorative chromium electro-plated finish that protects against tarnish and minimizes scratching. Brodart Class AA chrome plating requires a .004" to .005" thick layer of bright nickel and a layer of chromium to produce a high-quality furniture grade finish.

TABLETOP HEIGHT

All tables are 16" high.

General Specifications

CONSTRUCTION

Shelving construction is modular type, utilizing an Industrial Grade Oriented Strand Board (OSB) as the core with two pieces of High Density Fiber (HDF) laminated to each side of the OSB. Shelving units are designed with the starter and adder concept and measure 36" from center to center of the uprights. Oak and Maple are the standard wood species for Geometrix shelving.

END/FINISHING PANELS

End panels are 1" thick, Industrial Grade Oriented Strand Board (OSB) as the core with two pieces of High Density Fiber (HDF) laminated to each side of the OSB. All edges are banded with matching veneer edgebanding. Edges are square, but eased. Vertical rows of holes are drilled near the front and rear of each panel for shelf adjustment on 32mm centers. Panels are drilled at front, rear, top, and bottom for embedding internal and external threaded bushings. Tops and bases are attached to end panels with 5/16" - 18 x 2" hex-head bolts and washers. Lag bolts or wood screws are not used.

INTERMEDIATE UPRIGHT PANELS AND TRANSITIONAL PANELS

Intermediate uprights are 1" thick, Industrial Grade Oriented Strand Board (OSB) as the core with two pieces of High Density Fiber (HDF) laminated to each side of the OSB. All edges are banded with matching veneer edgebanding. Edges are square, but eased. Shelf pinholes are bored on both sides of the panel, but staggered so that pins can be deeply seated. Panels are drilled through at front, rear, top, and bottom for attachment of tops and bases with 5/16"-18 x 4-1/2" hex-head bolts, nuts, and washers.

BASE

The base front is 3-1/4" H X 3/4" thick Industrial Grade Oriented Strand Board (OSB) as the core with two pieces of High Density Fiber (HDF) laminated to each side of the OSB with a 3/4" thick base shelf. A 2" x 3/4" full-length rail is tenoned to the inside of the front. Bolting cleats 1-1/4" x 1-1/4" are glued and stapled perpendicular at the ends of the rail and drilled to allow assembly bolts to pass through. A second full-length rail is glued and stapled to the rear of the bolting cleats for support and proper alignment. Bases are manufactured so the base shelf rests on the top of the base front.

ATTACHMENT

Four bolts are used to attach each single-faced base or top. Eight bolts are used to attach each double-faced base or top, except for 23"D double-faced units, on which sixteen bolts are used. All hardware is concealed from view after assembly. Hardware kits for attaching single-faced units to the wall are available upon request and are sold separately.

BACKS AND PARTITIONS

Backs and partitions are constructed of 3-ply or 5-ply furniture-grade Oak or Maple veneered plywood finished on both sides to match shelving.

Note: Backs must be ordered separately.

STARTERS AND ADDERS

Starters and Adders include top, base, and shelves. Starters include one end panel, shelf pins and joining holes on inside only. Adders include one intermediate upright panel with shelf pins and joining holes on both sides. Finishing panels include shelf pins and joining holes on inside only.

Note: A finishing panel must be ordered separately to finish shelving.

Starter

Includes one end panel, shelf pins and joining holes on inside only. 37-3/16"W overall.

Adder

Includes one intermediate upright with shelf pins and joining holes on both sides. 36-3/16"W overall.

Finishing Panel

General Specifications - Tops and Towers

WOOD SHELVING TOPS

Cornice tops have a 1-1/2" fascia, 3/4" thick, Industrial Grade Oriented Strand Board (OSB) as the core with two pieces of High Density Fiber (HDF) laminated to each side of the OSB, glued to a 3/4" thick Industrial Grade Oriented Strand Board (OSB) as the core with two pieces of High Density Fiber (HDF) laminated to each side of the OSB, of specified depth. On the inside surface of the top at each end, butted to the fascia, is a solid hardwood bolting cleat 1-1/4" x 1-1/4" that is both glued and stapled. For additional strength, three 1-3/4" cleats are added at the intersection of the fascia and top panel. Bolting cleats are drilled to allow assembly bolts to pass through.

Note: Tops on 72"H units are inverted.

TRIANGLE TOWERS AND TRANSITIONAL TRIANGLE TOWERS

Triangle Towers are created using 1" thick, Industrial Grade Oriented Strand Board (OSB) as the core with two pieces of High Density Fiber (HDF) laminated to each side of the OSB. All edges are banded with matching veneer edgebanding. Edges are square, but eased. Vertical rows of holes are drilled near the front and rear of each panel for shelf adjustment on 32mm centers. Towers are assembled using 1-3/4" cleats attached to the inside of the tower panel. Panels are drilled at front, top, and bottom for embedding internal and external threaded bushings. Tops and bases are attached to triangle towers with 5/16" - 18 x 2" hex-head bolts and washers. Lag bolts or wood screws are not used.

General Specifications - Shelves & Mobile Units

WOOD SHELVES

Shelves are 1" thick, Industrial Grade Oriented Strand Board (OSB) as the core with two pieces of High Density Fiber (HDF) laminated to each side of the OSB. Adjustable shelves are notched 3/8" wide x 3/16" high x 3/4" long on the underside to set firmly on 1" long, 5/16" diameter threaded shelf pins, cadmium-plated. Shelf depths are nominal.

MOBILE SHELVING UNITS

Mobile Shelving is available on 36", 42", 48", and 60-1/2" units. Shelving construction is the same as the standard shelving with the exception of the base; the base facing is 3-3/16"H. Four 2-1/2" diameter heavy-duty swivel casters attached to a 14 gauge caster bracket will be attached to the bottom of the unit with four #12 x 3/4" wood screws each. The caster assembly is hidden within the base, giving the appearance of standard unit.

General Specifications

CONSTRUCTION

Shelving construction is modular type, utilizing thermally-fused laminate panels. Shelving units are designed with the starter and adder concept and measure 36" from center to center of the uprights. Oak, Classic Maple, Canadian Gray, Classic Black, and Bright White are the standard finishes for laminate shelving uprights, tops, and bases. Shelves are available in Orange, Red, Plum, Island Green, and Lapis Blue, in addition to the colors listed previously.

END/FINISHING PANELS

End panels are 1" thick thermally-fused laminate panels. All edges are banded with matching 2MM PVC edgebanding. Edges are square, but eased. Vertical rows of holes are drilled near the front and rear of each panel for shelf adjustment on 32mm centers. Panels are drilled at front, rear, top, and bottom for embedding internal and external threaded bushings. Tops and bases are attached to end panels with 5/16" - 18 x 2" hex-head bolts and washers. Lag bolts or wood screws are not used.

INTERMEDIATE UPRIGHT PANELS AND TRANSITIONAL PANELS

Intermediate uprights are 1" thick thermally-fused laminate panels. All edges are banded with matching 2MM PVC edgebanding. Edges are square, but eased. Shelf pinholes are bored on both sides of the panel, but staggered so that pins can be deeply seated. Panels are drilled through at front, rear, top, and bottom for attachment of tops and bases with 5/16"-18 x 4-1/2" hex-head bolts, nuts, and washers.

BASE

The base front is 3-1/4"H X 3/4" thick thermally-fused laminate panel with a 3/4" thick base shelf. A full-length 2" x 3/4" rail is tenoned to the inside of the front. Bolting cleats 1-1/4" x 1-1/4" are glued and stapled perpendicular at the ends of the rail and drilled to allow assembly bolts to pass through. A second full-length rail is glued and stapled to the rear of the bolting cleats for support and proper alignment. Bases are manufactured so the base shelf rests on top of the base front.

ATTACHMENT

Four bolts are used to attach each single-faced base or top. Eight bolts are used to attach each double-faced base or top, except for 23"D double-faced units, on which sixteen bolts are used. All hardware is concealed from view after assembly. Hardware kits for attaching single-faced units to the wall are available upon request and are sold separately.

BACKS AND PARTITIONS

Backs and partitions are constructed with 1/4" thick thermally-fused laminate panels.

Note: Backs must be ordered separately.

STARTERS AND ADDERS

Starters and Adders include top, base, and shelves. Starters include one end panel, shelf pins and joining holes on inside only. Adders include one intermediate upright panel with shelf pins and joining holes on both sides. Finishing panels include shelf pins and joining holes on inside only.

Note: A finishing panel must be ordered separately to finish shelving.

Starter

Includes one end panel, shelf pins and joining holes on inside only. 37-3/16"W overall.

Adder

Includes one intermediate upright with shelf pins and joining holes on both sides. 36-3/16"W overall.

Finishing Panel

General Specifications – Tops and Towers

SHELVING TOPS

Cornice tops have a 1-1/2" fascia, constructed with 3/4" thick, thermally-fused laminate panel with matching 2MM PVC edgebanding, glued to a 3/4" thick thermally-fused laminate panel of specified depth. On the inside surface of the top at each end, butted to the fascia, is a solid hardwood bolting cleat 1-1/4" x 1-1/4" that is both glued and stapled. For additional strength, three 1-3/4" cleats are added at the intersection of the fascia and top panel. Bolting cleats are drilled to allow assembly bolts to pass through.

Note: Tops on 72"H units are inverted.

TRIANGLE TOWERS AND TRANSITIONAL TRIANGLE TOWERS

Triangle Towers are created using 1" thick, thermally-fused laminate panels. All edges are banded with matching 2mm PVC edgebanding. Edges are square, but eased. Vertical rows of holes are drilled near the front and rear of each panel for shelf adjustment on 32mm centers. Towers are assembled using 1-3/4" cleats attached to the inside of the tower panel. Panels are drilled at front, top, and bottom for embedding internal and external threaded bushings. Tops and bases are attached to triangle towers with 5/16" - 18 x 2" hex-head bolts and washers. Lag bolts or wood screws are not used.

General Specifications - Shelves & Mobile Units

LAMINATE SHELVES

Shelves are 3/4" thick, thermally-fused laminate, banded on front and back with matching 2MM PVC edgebanding. To ensure adequate support for heavy volumes, a 3/4" thick, 1-1/4"W support member is attached to the back edge of the bottom of each shelf. Adjustable shelves are notched 3/8"W x 3/16"H x 3/4"L on the underside to set firmly on 1" long, 5/16" diameter threaded shelf pins, cadmium-plated. Shelf depths are nominal.

MOBILE SHELVING UNITS

Mobile Shelving is available on 36", 42", 48", and 60-1/2" units. Shelving construction is the same as the standard shelving with the exception of the base; the base facing is 3-3/16"H. Four 2-1/2" diameter heavy-duty swivel casters attached to a 14 gauge caster bracket will be attached to the bottom of the unit with four #12 x 3/4" wood screws each. The caster assembly is hidden within the base, giving the appearance of standard unit.

 All Transitional Tower Adders.
 All Three-Way Towers.

INLINE - Starter and adder back panels are on the same side of shelving units.

REVERSE - Starter and adder back panels are on the opposite side of shelving units.

TRANSITIONAL ADDERS/TOWER ADDERS - These are used when you are transitioning from a single-faced to double-faced unit, double-faced to single-faced unit, or single-faced unit to single-faced unit where the shelving units are positioned on opposite sides of the double-faced panel.

INNER SEATS - Inner seats are used on Convex Shelving.

OUTER SEATS - Outer seats are used on Concave Shelving.

SEATING - In some cases there will be two types of seating: Overlap End Panels and Inside End Panels.

Overlap End Panels Seating is used when you have a continuous run of seats that need to butt against each other to prevent a gap. They must overlap half of the edge of the end panel to achieve this. Inside End Panels Seating is used when you only need one seat or if the seat is used between two shelving units.

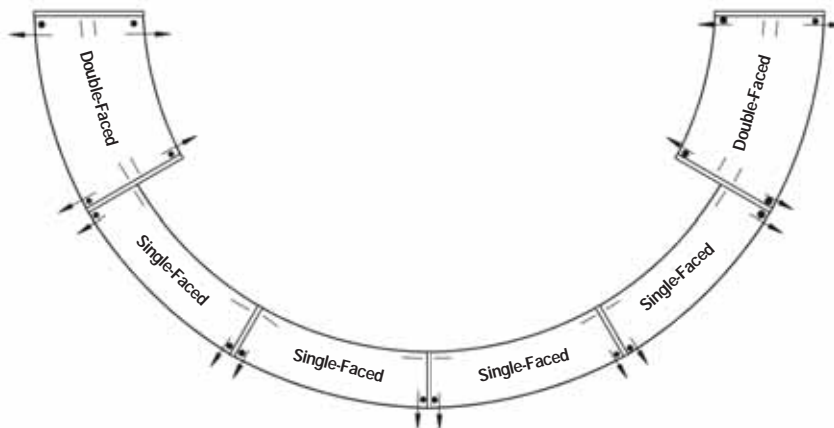

Note: These scenarios are labeled and depicted with images under each seating type in the seating section of the pricebook.

WHEN TO USE 37" WIDE CURVED SHELVING vs 44" WIDE CURVED SHELVING - 37" Wide Curved Shelving is used when you are transitioning from a curved Double-Faced unit to a Concave Single-Faced unit and the Single-Faced shelves are facing the inside of the curve. 44" Wide Curved Shelving is used when you are transitioning from a curved Double-Faced unit to a Single-Faced curved unit and the shelves are facing the outside of the curve.

General Specifications

OAK AND MAPLE BACKS

Backs are constructed of 3-ply or 5-ply furniture-grade Oak or Maple veneered plywood finished on both sides to match shelving.

LAMINATE BACKS

Backs are constructed with 1/4" thick thermally-fused laminate panels.

WHITEBOARD BACKS

Whiteboards will be 1/32" thick and applied to oak, maple or laminate backs using heavy-duty glue.

MAGNETIC WHITEBOARD BACKS

Magnetic Whiteboards will be 1/32" thick and applied to oak, maple or laminate backs using heavy-duty glue.

TACKBOARD BACKS

Tackboards will be 1/4" thick and applied to oak, maple or laminate backs using heavy-duty glue.

UPHOLSTERED BACKS

Upholstered appliques will be 1/2" thick and applied to oak, maple or laminate backs using velcro strips. Quantity of velcro strips will be determined by size of upholstered back. Upholstered backs will be constructed using a 3/8" thick wood panel with a 1/4" thick foam piece covered with choice of Brodart fabrics.

General Specifications for all Seating

SEAT FRAME

Seat frame will be 3/4" thick engineered hardwood. Frame components and corner blocks are glued and stapled. Foam for vertical surfaces will be 1/2" thick, 1.5 density, 45 CFR. Seat foam will be 2" thick, 2.5 density, #55 Ultra-cell.

BASE (TOE KICK)

Linear wood seating bases will be 3/4" thick hardwood. Curved seating bases will be 3/4" thick engineered plywood. Linear laminated seating bases will be 3/4" thick thermally-fused laminate panels. Curved seating bases will be 3/4" plywood laminated with high-pressure laminate.

General Specifications

TABLETOP FOR WOOD VENEER

Tabletop will be 1" thick veneer particleboard. Wood veneer tops receive a 1/4" thick x 1"W wood (Maple or Oak) edgeband.

TABLETOP FOR THERMALLY-FUSED LAMINATE (TFL)

Tabletop will be 1" thick MDF, with .050" thick thermally-fused laminate surface and .020" thick backing sheet for balanced construction. TFL tops receive a T-mold edgeband, which will be flexible polyethylene, 2mm thick x 1"W.

TABLETOP FOR HIGH-PRESSURE LAMINATE (HPL)

Tabletop will be 1" thick particle board, with .050" thick high-pressure laminate surface and .020" thick backing sheet for balanced construction. HPL tops receive a T-mold edgeband, which will be flexible polyethylene, 2mm thick x 1"W. Tabletops can also receive a 5/8" thick x 1-1/16"W wood (Maple or Oak) edgeband.

BLADE LEGS (METAL)

Legs will be 1" x 3" steel rectangular tubing with a wall thickness no less than 2mm. Legs are supplied with a standard glide insert. Metal legs attach to table top by means of a flange welded to the leg. Attachment flange will be 3-3/4" x 3-3/4" metal plate formed and welded on two sides to the leg. Each leg attachment flange is attached to the metal apron support frame using four #8 x 3/4" screws and then attached to the underneath of the tabletop by five #12 x 3/4" screws. Legs will be finished with electrostatic applied epoxy powder-coat paint.

APRON SUPPORT FRAME

A metal frame 1"W x 2"H x 2mm thick in various lengths will be attached to underside of the tabletop using #12 x 3/4" screws. Each leg attachment flange will be attached to the apron support frame using four #8 x 3/4" screws.

ASSEMBLED TABLES

Finished tables come in heights of 30"H, 36"H, and 42"H.

General Specifications

DESKTOP

Standard desktops are 1-3/16" thick, 3-ply, 45# density, particleboard core, with a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thickness for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Top receives a 5/8" thick x 1-3/16" solid maple edge band on the patron side with edges radiused to form a bullnose shape. A 1/4" thick, solid maple edge band is applied to the remaining three sides, with top and bottom edges radiused to 1/8". All edges are applied to the desktop after the top and bottom laminate sheets are applied, constituting an external edge band. Desktop is positioned over the end panels of the desk module, flush with the outside edges of the end panels.

END PANEL

Desk module end panels are 1" thick, 3-ply, 45# density particleboard core with select plain-sliced maple veneer on both sides. Exposed edges are externally banded with a maple band. The end panels and front panel are joined and secured with 3/4" x 3/4" thick solid hardwood cleats screwed to the inside surfaces of the panels. The bottom of each end panel receives two adjustable glides to allow leveling of the individual units. Each end panel receives a 3" diameter egress and grommet to provide for wire passage.

FRONT PANEL

The front panel is 3/4" thick, comprised of select plain-sliced face veneers maple over a 45# density particle board core. Exposed edges are externally banded with a maple band. The front incorporates a 6"H x 3/4"D recessed, ebonized, toe space at the bottom of the panel. The front panel is positioned over the end panels of the desk module, flush with the outside edges of the end panels. Double wide units have two front panels to give the appearance of two individual units. At the top of the front panel, a 6"W x 1/4" thick maple plywood accent panel is attached that runs the full width of the desk unit front. The grain direction runs horizontally. This panel has a large cutout design as selected by the customer. The inside edges of the cutout and outer edges of the accent panel are blackened to provide a finished appearance. When the cutout design is large enough, a matching cutout of colored high-pressure laminate is inlaid in the cutout. When the cutout is small (such as the sports stick figures) no high-pressure laminate is inlaid.

DESK DIMENSIONS

Standing-Height Desk, overall:
39-3/16"H x 35"W x 30"D or 39-3/16"H x 70"W x 30"D.

Sitting-Height Desk, overall:
32-3/16"H x 35"W x 30"D or 32-3/16"H x 70"W x 30"D.

WORK SURFACE

Work surfaces are 1-3/16" thick, 3-ply particleboard core, including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thickness for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. The exposed edge receives a 1/4" thick, solid maple internal edge band in straight design. The back edge of the work surface has a black plastic band 1-1/2"W which projects above the work surface 1/4" to act as a retainer. The work surface is 24-1/2"D and is positioned 1-1/2" away from the front panel, creating a cord drop space. Adjustable work surfaces are available in single wide standing height desks. Work surfaces in standing-height desks (catalog number 77-012) may be positioned at heights of 36", 32" or 27".

Note: See Brodart optional electrical accessories for electrical power distribution system for desk modules.

SHELVES

Shelves are constructed of 7-ply veneer-core plywood, with plain sliced maple face veneer. Exposed edges receive a maple edge band.

DRAWER

Drawers are constructed of solid hardwood with 1/4" thick wood bottom panel. Drawers have 3-ply particleboard fronts with select maple-face veneer. Box drawers have extension slides with 100# load capacity. File drawers have full-extension slides with 100# load capacity.

General Specifications

TABLETOPS

Standard tabletops are 1-3/16" thick, 9-ply plywood core, or a 1-3/16" thick particleboard core, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thickness for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are solid maple. Drop edge band is 5/8" thick x 1-5/8" externally banded to form a bullnose.

TABLE LEGS

Legs are solid maple wood, 2-1/2" diameter. Each leg has a 3-1/2" diameter x 2-5/8"H glued-up maple bun-foot. Each bun-foot has a 2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the bun-foot by means of a counter-sunk boring which accepts the upper two-thirds of the glide.

Legs attach to tabletops by means of a 5" square x 5/16" thick steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded bushings in the underside of the tabletop. Leg plates are positioned behind, and be hidden by, the extended table edge band.

TABLETOP SUPPORT

For maximum rigidity, rectangular tables, 60" or more wide, receive a V-shaped, 14-gauge steel keel securely fastened to the underside of the tabletop. Tables 48"D and more than 60" W, receive two steel keels parallel to the length of the table. Tables 90" or wider receive two extra matching legs located under the center of the table to provide added support.

Rectangular Table with Center Support Legs

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

TABLETOPS

Standard tabletops are 1-3/16" thick, 5-ply solid-lumber core, except 90"W tables which have a 1-3/16" thick particleboard core, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thickness for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are solid maple. Drop edge band is 5/8" thick x 1-5/8" externally banded to form a bullnose.

TABLE LEGS

Each leg is 2-1/2" diameter, 16-gauge steel tubing and has a 3-1/2" diameter x 2-5/8"H glued-up maple bun-foot as a design feature. Each bun-foot has a 2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the bun-foot by means of a counter-sunk boring which accepts the upper two-thirds of the glide. Legs attach to tabletops by means of a 5" square x 5/16" thick cold-rolled steel plate. The plate is fillet-welded to the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded bushings in the underside of the tabletop. Leg plates are positioned behind, and be hidden by, the extended table edge band.

TABLETOP SUPPORT

For maximum rigidity, rectangular tables, 60" or more wide, receive a V-shaped, 14-gauge steel keel securely fastened to the underside of the tabletop. Tables 48"D and more than 60"W, receive two steel keels parallel to the length of the table. Tables 90" or wider receive two extra matching legs located under the center of the table to provide added support.

General Specifications

WORKSTATIONS

Workstations are of modular starter and adder design, with overall height 33". Workstations are available in 36", 48", 72", 96" and 108" widths. A knee-space panel located below the work surface supports all work surfaces greater than 48"W. Work surface height is 27-1/2". Work surface depth is 27-1/2" with an additional 1-1/2"W cord drop between the work surface and back panel to allow passage of electrical cords. Work surface is attached to end and intermediate panels by means of two metal 22-1/2" long "Z" brackets with 5/16" – 18 hex-head bolts engaging internally and externally threaded bushings embedded into panels. The back panel is attached to end and intermediate panels using hidden metal keyways and shoulder screws. The shelf is attached to end and intermediate panels and back panels with 3/4" x 3/4" steel, black painted angle brackets and black #8 screws.

WORK SURFACE

Standard work surface is 1-3/16" thick, 3-ply, 45# density particleboard, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thickness for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Front edge of work surface has a 5/8" x 1-5/8" solid maple edge band in a half-round bullnose shape. The back edge of the top has a black plastic band 1-1/2"W which projects above the work surface 1/4" to act as a retainer.

END AND INTERMEDIATE PANELS

End panels are 1" thick and intermediate panels are 1-3/16" thick particleboard with select face veneers of maple wood. All edges are banded with a 5/8" maple wood edge band. Intermediate panels receive a 3" diameter grommet below the work surface to allow passage of electrical and data wires. Each panel receives two 1-1/4" adjustable glides.

BACK PANEL

Back panel is 3/4" thick, 45# density particleboard core with face veneers of select maple wood. The top and bottom edges of the back panel receive 1.6mm thick maple wood edge bands. Back panels attach to end and intermediate panels by means of recessed metal fasteners and shoulder screws. The back panel on double-faced units receives a 3" diameter grommet located below the work surface to allow passage of electrical and data wires.

DESIGN CUTOUTS

The wooden 1" thick end panels have a laser cut out design as selected by the customer. The inside edges of the cutout are blackened to provide a finished appearance. Cutouts are available on starter units only (end panels).

SHELF

Shelf is 3/4" thick x 8"D 45# density particleboard core with face veneers of select maple wood. Shelf is banded on the front edge with a 1.6mm maple wood band. Shelf attaches to end and intermediate panels by means of a pair of metal "L" brackets. Back corners of shelf have a 3" x 3" cutout to allow for the passage of electrical cords. The shelf is positioned 10" below the bottom of the work surface.

WIRE MANAGEMENT DOOR

The wire management door is positioned between the bottom of the work surface and the shelf and is designed to form a concealed wire management channel 8-1/2"H x 9-1/2"D. The door is 1/4" thick with select maple wood face veneers. The door slides in two aluminum tracks, one that is attached to the bottom of the work surface while the other is attached to the top of the shelf.

KNEE-SPACE PANEL

All 72" and 96"W workstations, as well as functional corner units, have a knee-space panel positioned under the work surface for additional work surface support. Units 108"W have two knee-space panels. The knee-space panel is 1-1/8" thick, 45# density particleboard core with select face veneers of maple wood. The panel is banded on exposed edges with a 1.6mm maple wood band. The knee-space panel is attached to the back panel using a 1-3/4" square post, grooved to receive the knee space panel and back panels. Panels attach to the post using recessed metal fasteners and shoulder screws. The knee-space panel is angled in the back to create a space to allow passage of electrical and data cords. The knee-space panel receives two 1-1/4" diameter black adjustable glides.

Sloped tops are 1-3/16" thick, particleboard core, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thickness for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are solid maple. The edge band is 5/8" thick, externally banded to form a bullnose. Loaded in the center of the table, between the two tops, is a display book bin 3-3/4"W running the full length of the table.

Design cutouts: The wooden 1" thick end panels have a 24" radius on the top edge and have a laser cut chosen by the customer. The inside edges of the cutout are blackened to provide a finished appearance.

Note: Hassocks for Picture Book Tables are located in the Display Specialty Seating Section page 15.

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

Note: Specify Cutout Design. Details can be found on page HOR 32.

General Specifications

END PANELS

The end panel is of maple plywood construction 1-1/4" thick with 1.6mm banded edges. The end panel has a large cutout design as selected by the customer. The inside edges of the cutouts are blackened to provide a finished appearance. When the cutout design is large enough, a matching cutout of colored high-pressure laminate is inlaid in the cutout of the panel. When the cutout is small (such as the sports stick figures) no high-pressure laminate is inlaid but the panel is 1" thick maple plywood construction and the cutout goes completely through the panel. End panels are not machined. No fastening hardware is provided with end panels.

End panels for steel shelving with continuous tops or canopy top inset are designed to have the canopy top "inset" between the end panels.

Note: Exact height and depth of panel must be specified when ordering.

General Specifications

CHAIR FRAME

Each frame member is constructed from 1-1/4" hardwoods. All frame joints are mortised, tenoned and glued. All frames have a 3/4" solid hardwood support brace in each corner to give the chair added strength. All seats are fastened with six "Z" brackets routed into the frame and screwed into the bottom of the seat.

CHAIR SEAT

Chair seats are 1/2" thick bent multi-ply faced with select hardwood veneers.

UPHOLSTERED SEAT

Upholstered seats receive 1-1/2" thick HR-55, 2.8 density 55 ILD foam prior to being covered by a selected upholstery material that is wrapped around and stapled to the underside of the seat panel.

WOOD CHAIR BACKS

Chair backs are 5/8" thick bent multi-ply faced with select hardwood veneers. Adult backs: 6-1/2"H x 20-1/4"W. Youth backs: 5-7/8"H x 17-3/8"W.

DESIGN CUTOUTS

The wood chair backs only have a laser cutout design as selected by the customer. The inside edges of the cutout are blackened to provide a finished appearance.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections and polyurethane foam are fire-rated.

Fabrics that meet Calif. Technical Bulletin #133 are available.

GLIDES

Each chair leg is equipped with a 7/8" diameter rubber-cushioned glide.

Fabric Requirements: 3/4 yard per chair, Non-directional, 54" wide.

Please specify Wood Finish (Table 1) and Upholstery (Table 5). Details can be found on pages GEN 4 and GEN 5.

Note: Specify Cutout Design. Details can be found on page HOR 32.

General Specifications

CHAIR FRAME

The chair frame is constructed of 16-gauge steel tubing. All joints are mig-welded. The front and back legs are 1-3/4" diameter and the side and front stretchers are 1-1/2" x 3/4" rectangular tubing. The framing includes four metal brackets attaching the seat.

CHAIR SEAT

Chair seats are 5/8" thick bent multi-ply faced with maple.

UPHOLSTERED SEAT

Upholstered seats receive 1-1/2" thick HR-55, 2.8 density 55 ILD foam prior to being covered by a selected upholstery material that is wrapped around and stapled to the underside of the seat panel.

WOOD CHAIR BACKS

Chair backs are 5/8" thick bent multi-ply faced with maple. Adult backs: 10"H x 19-1/2"W. Youth backs: 8"H x 15-7/8"W.

DESIGN CUTOUTS

The wood chair backs only have a laser cutout design as selected by the customer. The inside edges of the cutout are blackened to provide a finished appearance.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections and polyurethane foam are fire-rated. *Fabrics that meet Calif. Technical Bulletin #133 are available.*

BALL GLIDES

Each chair leg ends with a 2" diameter solid maple ball glide. The bottom of the ball glide has a surface of high-density polyethylene to protect the glide and floor.

General Specifications

DESKTOP

Standard desktops are 1-3/16" thick, 45# density particleboard core, with a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Top receives a 5/8" thick, solid northern-grown white maple edge band on the patron side, and it is of a straight design with a 1/4" radius on the top and bottom edges. The remaining three edges receive a 1/4" solid white maple band with 1/8" radius. All four edges are externally banded being applied after the laminate and backing. The top sits flush with the unit's ends and back side and overhangs 2-1/2" at the front side. (See band variation on adjustable or set in work surfaces.)

END PANELS

Desk module end panels are 1" thick, 45# density particleboard core with grade A-A plain-sliced northern grown white maple veneers, slip-matched on both faces. The four edges are banded with matching maple wood banding. The end panels and front panel are joined together with 3/4" x 3/4" cleats and screws. The bottom of each end receives two adjustable leveling glides. Each end also has a 3" diameter grommet hole for power and data cord passage.

DETACHABLE END PANELS

Detachable end panels are 1" thick, 45# density particleboard core with grade A-A plain-sliced northern grown white maple veneers, slip-matched on both faces. The four edges are banded with matching maple wood banding. The decorative end panel has four bolting holes to attach at the end of a range of desk units. These detachable end panels are offered as a pair. The outside face on the panels receive a series of black 1/2" design squares, two rows of ten squares and one row of nine squares. The design pattern of squares is centered left to right and begins 3-3/4" down from the top edge of the panel.

FRONT PANELS

The front panel is 3/4" thick, 45# density particleboard core with Grade A-A plain-sliced, northern-grown white maple veneers, slip-matched on both faces. The edges are banded with matching white maple wood. Connected to the bottom area of the front is a 6"H x 3/4"D recessed, ebonized kick plate. The front panel is positioned over the front edges of the end panels of the desk module, flush with the outside edges of the desk unit. Double-wide units have two front panels to maintain the uniform look of 35"W units for aesthetic purposes. The front panels of all units receive a series of black 1/2" design squares to form a design pattern. Single-wide units receive two rows of 14 squares and one row of 13 squares. Double-wide units receive twice as many squares. The design pattern of squares is centered left to right and begins 3-3/4" down from the top edge of each front. All corner units receive a matching design pattern of 1/2" black squares.

ADJUSTABLE WORK SURFACE (Available on limited units)

Work surfaces are 1-3/16" thick, 45# density particleboard core, including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick for balanced construction. Plastic laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. The exposed edge at the rear of the desk receives a 1/4" thick, maple internal edge band in straight design with a 1/4" radius on the top and bottom edges. Available in standing height unit only and adjustable to 36", 32" and 27"H.

SHELVES

Shelves are constructed of plywood with matching wood veneers, the front edge receive a matching maple wood band.

DRAWERS

Drawers are constructed of solid hardwood with 1/4" thick plywood bottom panel. Fronts are 3/4" thick with matching maple veneer faces and banded edges. Box drawers have 3/4" full extension metal slides, and file drawers have full extension metal slides; each are 100 lb. load capacity.

ELECTRICAL

See Brodart optional electrical accessories for electrical power distribution and wire management components.

DESK DIMENSIONS

Standing-Height Desk, Overall:

Single Units: 39-3/16"H x 35"W x 30"D

Double Units: 39-3/16"H x 70"W x 30"D

Sitting-Height Desk, Overall:

Single Units: 32-3/16"H x 35"W x 30"D

Double Units: 32-3/16"H x 70"W x 30"D

Matrix Series Flush Edge

General Specifications

TABLETOP

Standard tabletops are 1-3/16" thick, a plywood core or 3-ply particleboard core, as specified, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thick for balanced construction, unless the top is over 72" long in which case it is .050" thick to prevent warping. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are white hardrock maple. This edge band is 5/8" thick x 1-5/8"W and is applied to the core after the top and bottom laminate sheets are applied making it an external edge. This wood edge band is rectangular in design with a 1/4" radius on the top and bottom front edges. The four tabletop corners are eased.

LEGS

Legs are round with compound tapers. The leg is 3-1/2" diameter at the top and 2-1/2" diameter 8" down from the top. At the bottom of the leg the diameter is 1-7/8". 8" down from the top of the leg is a vein-line 1/8"D x 1/8"W. The leg is one piece solid maple. The bottom of the leg has an 1/8" chamfer and an adjustable, leveling floor glide. The legs attach to the underside of the tabletop by means of a 5" square x 5/16" thick steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" long machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The steel plate is attached to the tabletop by five 5/16"-18 x 1" long machine screws engaging internally and externally threaded bushings in the underside of the tabletop. Leg plates are positioned behind, and hidden by, the extended table edge band.

TABLETOP SUPPORT

For maximum rigidity, rectangular tables, 60" or more wide, receive a hat-shaped, 1-7/16"H x 1-1/2"W, steel keel securely fastened to the underside of the center of the tabletop. Tables 48"D receive two steel keels. Tables 90" or wider also receive two extra legs located under the center of the table to provide added support. The additional legs are 2-1/4" square solid Maple with a 1/2" radius on vertical edges. Added legs are stained black.

Rectangular Table with Center Support Legs

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

TABLETOP

Standard tabletops are 1-3/16" thick, a plywood core or 3-ply particleboard core, as specified, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thick for balanced construction, unless the top is over 72" long in which case it is .050" thick to prevent warping. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are white hardrock maple. This edge band is 5/8" thick x 1-5/8"W and is applied to the core after the top and bottom laminate sheets are applied making it an external edge. This wood edge band is rectangular in design with a 1/4" radius on the top and bottom front edges. The four tabletop corners are eased.

LEGS

Legs are 11-gauge steel angle measuring 4" x 4" at the top of the leg and 1-5/8" x 1-5/8" at the bottom of the leg. The leg has two compound tapers, one goes from the inside corners down 8" at a 12° angle. One goes from the outside corner down 8" at a 12° angle, the other one picks up there and continues down to the bottom of the leg at a 2° angle. The leg attaches to the underside of the tabletop using a 5" square x 5/16" thick steel plate. The plate is fillet welded to the inside top of the leg on two edges. The steel plate is attached to the underside of the tabletop with five 5/16"-18 x 1" long machine screws engaging internally and externally threaded metal bushings embedded into the underside of the tabletop. The leg plates are positioned behind, and hidden by, the extended table edge band. Each leg has an adjustable leveling floor glide. The metal legs are finished with an electrostatically applied epoxy-powder paint.

TABLETOP SUPPORT

For maximum rigidity, rectangular tables 60" or more long receive a 1-7/16"H x 1-1/2"W hat-shaped steel keel securely fastened to the underside of the center of the tabletop. Tables 48"D receive two steel keels. Tables 90" and longer also receive two extra legs located down the center of the table to provide added support. The additional legs are 2-1/4" square solid Maple with a 1/2" radius on vertical edges. Added legs are stained black.

General Specifications

TABLETOP

Standard tabletops are 1-3/16" thick, a plywood core or 3-ply particleboard core, as specified, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thick for balanced construction, unless the top is over 72" long in which case it is .050" thick to prevent warping. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are white hardrock maple. This edge band is 5/8" thick x 1-5/8"W and is applied to the core after the top and bottom laminate sheets are applied making it an external edge. This wood edge band is rectangular in design with a 1/4" radius on the top and bottom front edges. The four tabletop corners are eased.

LEGS

Each leg is 2-1/2" diameter, 16-gauge steel tubing. Each leg has a 2-1/2" diameter x 1"H adjustable glide mounted into a recessed treaded insert. Legs attach to tabletops by means of a 5" square x 5/16" thick cold-rolled steel plate. The plate is fillet-welded to the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded bushings in the underside of the tabletop. Leg plates are positioned behind, and are hidden by, the extended table edge band.

TABLETOP SUPPORT

For maximum rigidity, rectangular tables, 60" or more wide, receive a V-shaped, 14-gauge steel keel securely fastened to the underside of the tabletop. Tables 48"D and more than 60"W, receive two steel keels parallel to the length of the table. Tables 90" or wider receive two extra matching legs located under the center of the table to provide added support.

Rectangular Table with Center Support Legs

Trapezoid Table

Please specify Wood Finish (Table 1), High-Pressure Laminate (Table 2) and Metal Color (Table 3). Details can be found on page GEN 4 and GEN 5.

General Specifications

TABLETOP

Standard tabletops are 1-3/16" thick 3-ply particleboard core, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thick for balanced construction, unless the top is over 72" long in which case it is .050" thick to prevent warping. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are white hardrock maple. This edge band is 5/8" thick x 1-5/8"W and is applied to the core after the top and bottom laminate sheets are applied making it an external edge. This wood edge band is rectangular in design with a 1/4" radius on the top and bottom front edges. The four tabletop corners are eased.

Note: All standing height tables are apron leg type tables and all sitting height tables are apronless leg type tables.

LEGS (Wood without Apron)

Legs are round with compound tapers. The leg is 3-1/2" diameter at the top and 2-1/2" diameter 8" down from the top. At the bottom of the leg the diameter is 1-7/8". 8" down from the top of the leg is a vein-line 1/8"D x 1/8"W. The leg is one piece solid maple. The bottom of the leg has an 1/8" chamfer and an adjustable, leveling floor glide. The legs attach to the underside of the tabletop by means of a 5" square x 5/16" thick steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" long machine bolt engaging a 5/8" diameter barrel nut inserted horizontally into the leg. The steel plate is attached to the underside of the tabletop by five 5/16"-18 x 1" long machine screws engaging internally and externally threaded metal bushings embedded into the underside of the tabletop. Leg plates are positioned behind, and hidden by, the extended table edge band. A 2-1/4" x 2-1/4" center leg, painted black, is used to help support the weight of computer equipment used on these types of tables.

LEGS (Wood with Apron on 39"H Tables)

Legs are round with compound tapers. The leg is 3-1/2" diameter at the top and 2-1/2" diameter 8" down from the top. At the bottom of the leg the diameter is 1-7/8". 8" down from the top of the leg is a vein-line 1/8" D x 1/8" W. The leg is one piece solid maple. The bottom of the leg has an 1/8" chamfer and an adjustable, leveling floor glide. The legs are secured by means of a 3-1/2"W x 1" thick apron that is secured to the tabletop by attaching hardwood cleats to the inside of the apron and screwing through the cleats into the underside of the top. The bottom front edge of the apron is radiused 1/4". The legs attach to the aprons by means of formed 14-gauge steel corner brackets. Each leg is bolted to the corner bracket with two 5/16"-18 hex head bolts that pass through the bracket and engage threaded metal bushings embedded into the leg.

LEGS (Metal)

Legs are 11-gauge steel angle measuring 4" x 4" at the top of the leg and 1-5/8" x 1-5/8" at the bottom of the leg. The leg has two compound tapers, one goes from the inside corners down 8" at a 12° angle. One goes from the outside corner down 8" at a 12° angle, the other one picks up there and continues down to the bottom of the leg at a 2° angle. The leg attaches to the underside of the tabletop using a 5" square x 5/16" thick steel plate. The plate is fillet welded to the inside

top of the leg on two edges. The steel plate is attached to the underside of the tabletop with five 5/16"-18 x 1" long machine screws engaging internally and externally threaded metal bushings embedded into the underside of the tabletop. The leg plates are positioned behind, and hidden by, the extended table edge band. Each leg has an adjustable leveling floor glide. The metal legs are finished with an electrostatically applied epoxy-powder paint.

LEGS (ROUND METAL)

Each leg is 2-1/2" diameter, 16-gauge steel tubing and has a 3-1/2" diameter x 2-5/8"H glued-up maple bun-foot as a design feature. Each bun-foot has a 2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the bun-foot by means of a counter-sunk boring which accepts the upper two-thirds of the glide. Legs attach to tabletops by means of a 5" square x 5/16" thick cold-rolled steel plate. The plate is fillet-welded to the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded bushings in the underside of the tabletop. Leg plates are positioned behind, and be hidden by, the extended table edge band.

LEGS (Center)

Additional legs added to the center of the table for extra support are 2-1/4" square, solid maple with a 1/2" radius on vertical edges. Added legs are stained black.

PRIVACY PANEL

Privacy panels are 10"H x 10-3/8"D x 1" thick, these panels and the back panel are white maple plain-sliced, slip-matched tight side out A-A veneer plywood. Exposed edges are banded with 1.6mm matching maple wood. The privacy panel attaches securely to the tabletop by screws passing through the tabletop and into the bottom edges of the privacy panel. The privacy panel is assembled with metal keyways and shoulder screws. The end panels receive a series of black 1/2" design squares, two rows of four squares, and one row of three squares on the outside face. The squares are centered left to right and begin 1-1/2" down from the top edge of the panel.

ELECTRICAL WIRE MANAGEMENT

Each position receives a 3" diameter grommeted hole for power and data passage. J-channel wire managers are mounted under tabletop to hold these cords. The grommets are ABS black plastic and the J-channel is 18-gauge black powder-coated steel.

General Specifications

CARRELS AND ACCESS STATIONS

Carrels and access stations are of a modular starter and adder concept, an overall height of 48" and a work surface width of 36" for the carrel and 36" or 48" for the access station. The work surface depth is 27-1/2" with an additional 1-1/2"W space between the work surface and the back panel to allow passage of electrical and data cords. The work surface is attached to the end and intermediate panels by means of 22-1/2" long steel Z-brackets and 5/16"-18 hex head bolts. Intermediates and ends have 5/16"-18 internally and externally threaded bushings to accept the bolts.

WORK SURFACE

Standard work surfaces are 1-3/16" thick, 3-ply 45# density particleboard, including a top surface of .050" thick, high-pressure laminate, with a backing sheet no less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Front edge is white hardrock maple, this edge band is 5/8" thick x 1-5/8"W and is applied to the core after the top and bottom laminate sheets are applied making it an external edge. This wood edge band is rectangular in design with a 1/4" radius on the top and bottom front edges. The back edge of the work surface has a black plastic strip 1-1/2"W which projects above the work surface 1/4" to act as a paper and pencil retainer.

END AND INTERMEDIATE PANELS

Panels are 1-3/16" thick comprised of white northern grade A-A maple veneers, slip-matched tight side out over a particleboard core. The panels are externally banded on all four edges with 1.6mm matching wood. The bottom of each panel receives two flush mounted tee-nuts and two 2-5/16"L x 3/4"W x 1/8" T steel straps and two 1-1/4" diameter adjustable chrome floor glides. The end panels on starter units receive a series of black 1/2" design squares, two rows of 12 squares and one row of 11 squares, on the outside face. The squares are centered left to right and begin 3-3/4" down from the top edge of the panel.

BACK PANELS

Back panels are 3/4" thick comprised of white northern grade A-A maple veneers, slip-matched tight side out over a 45# density particleboard core. The panel is externally banded on the top and bottom with 1.6mm matching wood band.

SHELF

The shelf is 3/4" thick x 10"D white northern grade A-A maple veneers, slip-matched tight side out over a 45# density particleboard core. The front edge of the shelf has a 1-3/4"H x 5/8" thick solid white hardrock maple drop edge with a 1/4" radius on the top and bottom edges. The shelf attaches to the ends and intermediates by means of a pair of metal angle brackets. The back corners of the shelf on the access stations have a cutout in them to allow passage of power and data cords. The shelf is located above the work surface on carrels and below the work surface on access stations.

WORKING SPACE HEIGHTS

Working space height is adjustable. The carrel work surface may be set at 29"H or 32"H. The information access stations work surface may be set at 27"H, 32"H or 39"H.

General Specifications

WORKSTATIONS

Workstations are of modular starter and adder design, with an overall height of 34". Workstations are available in 36", 48", 72", 96", and 108" widths. A knee-space panel located below the work surface supports all work surfaces greater than 48"W. Work surface height is at 27-1/2". Work surface depth is 27-1/2" with an additional 1-1/2"W cord drop between the work surface and back panel to allow passage of electrical cords. Work surface is attached to end and intermediate panels by means of two metal 22-1/2" long "Z" brackets with 5/16"-18 hex-head bolts engaging internally and externally threaded bushings embedded into panels. The back panel is attached to end and intermediate panels using hidden metal keyways and shoulder screws. The shelf is attached to end and intermediate panels and back panels with 3/4" x 3/4" steel black painted angle brackets and black #8 screws.

WORK SURFACE

Standard work surface is 1-3/16" thick, 3-ply, 45# density particleboard, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Front edge is white hardrock maple. This edge band is 5/8" x 1-3/16"W and is applied to the core after the top and bottom laminate sheets are applied making it an external edge. This wood edge band is rectangular in design with a 1/4" radius on the top and bottom front edges. The back edge of the work surface has a black metal strip 1-1/2"W which projects above the work surface a 1/4" to act as a paper and pencil retainer.

END AND INTERMEDIATE PANELS

End and intermediate panels are 1-3/16" thick comprised of white northern-grown grade A-A plain-sliced maple veneers, slip-matched on both faces. The four edges are banded with matching maple wood banding. The core is 45# density particleboard. Each panel has two adjustable leveling floor glides. Intermediate panels have a 3" diameter grommet below the work surface to allow passage of power and data cords. The outside faces of the end panels receive a series of black 1/2" design squares, two rows of 12 squares and one row of 11 squares. The squares are centered left and right and begin 3-3/4" down from the top edge.

BACK PANEL

Back panel is 3/4" thick with the same veneer spec as the end panels. Back panels on double-faced units have a 3" diameter grommet below the work surface.

SHELF/WIRE MANAGEMENT COMPARTMENT

Shelf is maple, 3/4" thick and attaches to the uprights by means of a pair of metal angle brackets. The shelf is positioned 10" below the bottom of the work surface. The compartment has sliding front doors to access the electrical items behind the doors. The doors slide in aluminum tracks at the top and bottom of the doors.

WORKING SPACE HEIGHT

The working space is fixed at 27"H.

General Specifications

WORK SURFACE

Work surface is 1-3/16" thick, 3-ply 45# density particleboard, including a top surface of .050" thick, high-pressure laminate, with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. The front edges are white hardrock maple. This edge band is 5/8" thick x 1-5/8"W and is applied to the core after the top and bottom laminate sheets are applied making it an external edge. This wood edge band is rectangular in design with a 1/4" radius on the top and bottom front edges. There is a 1-1/2" space between the back of the work surface and the back panel to allow passage of power and data cords. The back edge of the work surface has a black plastic strip 1-1/2"W which projects above the work surface 1/4" to act as a paper and pencil retainer. The work surface is attached to the end and intermediate panels by means of 22-1/2" long steel "Z"-brackets and 5/16"-18 hex head bolts. Intermediates and ends have 5/16"-18 internally and externally threaded bushings embedded in them to accept the bolts.

END AND INTERMEDIATE PANELS

Panels are 1-3/16" thick comprised of white northern grade A-A maple veneers, slip-matched tight side out over a particleboard core. The panels are externally banded on all four edges with 1.6mm matching wood. The bottom of each panel receive two flush mounted tee-nuts and two 2-5/16"L x 3/4"W x 1/8" T steel straps and two 1-1/4" diameter adjustable chrome floor glides. The end and intermediate panels receive a series of 1/2" design squares, two rows of two squares and one row of one square, on each face. The squares begin 1-1/2" down from the top edge of each panel and 1-1/2" in from the front edge of each panel.

BACK PANELS

Back panels are 3/4" thick, comprised of white northern grade A-A maple veneers, slip-matched tight side out over a 45# density particleboard core. The panel is externally banded on the top and bottom with 1.6mm matching wood band. The back panels attach to the ends and/or intermediates by means of triangular maple wood posts and hidden keyways and shoulder screws. One of the back panels have an electrical access door, all of the back panels have a 3" diameter grommet hole for power and data cord passage.

SHELF

The shelf is 3/4" thick x 10"D, with matching maple veneers over a 45# density particleboard core. The front edge of the shelf has matching wood edge. The shelf attaches to the ends and intermediates by means of a pair of metal angle brackets.

WORKING SPACE HEIGHTS

Working space is adjustable to:

Standing Height: 39"

ADA Height: 32"

Sitting Height: 27"

Matrix Series Flush Edge

The top of the dictionary stand slopes down toward the front of the unit at a 10° angle. The top is 1-3/16" thick, consisting of a 45# density particleboard core, a top surface of .050" thick high-pressure laminate, with a backing sheet not less than .020" thick. A 5/8" x 5/8" book retainer at the front of the top keeps books from sliding off. The top edges receive maple bands. The unit has a full back panel which matches the end panels. The end panels are 1-3/16" thick with A-A plain-sliced white maple veneer, slip-matched, edges receive matching wood edge bands. The bottom edge of each end receives two adjustable floor glides. There is one adjustable shelf and one bottom fixed maple shelf. The end panels receive a series of black 1/2" design squares, two rows of six squares and one row of five squares, on the outside face. The squares are centered left to right and begin 1-1/2" down from the top front edge of the panel.

Atlas Stand	93-871-S00 OAK	93-871-S00 MAP	Adult Height	45" x 30" x 28-1/4"	200	\$4,019	\$4,381

The top of the atlas stand slopes down toward the front of the unit at a 10° angle. The top is 1-3/16" thick, consisting of a 45# density particleboard core, a top surface of .050" thick high-pressure laminate, with a backing sheet not less than .020" thick. A 5/8" x 5/8" book retainer at the front of the top keeps books from sliding off. The top edges receive maple bands. The unit has a full back panel which matches the end panels. The end panels are 1-3/16" thick with A-A plain-sliced white maple veneer, slip-matched edges receive matching wood edge bands. The bottom edge of each end receives two adjustable floor glides. There are five pull-out maple shelves on metal slides with a positive stop to prevent accidental removal. The shelves are 25-7/8"W x 23-7/8"D, with 3-1/2" space between them. The children's height atlas stand has four pull-out shelves, with 3-1/2" usable space between the shelves. The end panels receive a series of black 1/2" design squares, two rows of ten squares and one row of nine squares, on the outside face. The squares are centered left to right and begin 1-1/2" down from the top front edge of the panel.

OPAC Station	93-039-S00 OAK	93-039-S00 MAP	End-of-Range Computer Station	38-3/16" x 24-1/8" x 20"	110	\$1,889	\$2,059
---------------------	----------------	----------------	-------------------------------	--------------------------	-----	---------	---------

Designed to fit at end of doublefaced shelving range. Standard tabletop is 1-3/16" thick with high-pressure laminate on the top surface, with one 3" diameter grommet, and with 5/8" thick external solid wood edge bands. End panels are 1-3/16" thick wood veneered and edge banded. Unit has two full-depth fixed shelves with 3" diameter grommets and one pullout shelf for the keyboard. Space above the fixed shelves is 11". Adjustable glides are provided for leveling the unit.

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

Note: Edge Band on long side only. Tops are designed to be inset between end panels. If edge bands are desired on short edges, please enter the part as a modification and specify which bands to be included.

To ensure that tops for steel shelving work with each manufacturer and top method, please specify the exact width and depth of tops. Add 15% for HPL on top and bottom (Steel Shelving ONLY).

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

END PANELS: STEEL SHELVING

The end panels are 1-3/16" thick. The core is 45# density particleboard with grade A-A plain-sliced white maple veneer on both faces. The type matching of the veneers is slip-matched, tight side out. All four edges are externally banded with 1.6mm white maple. The end panels are supplied without machining or hardware for attachment. The outside face of the end panels receives three rows of black 1/2" design squares.

The number of design squares in each row are determined by the depth

of the panel. The squares are centered left to right and begin 3-3/4" down from the top edge of the panel.

End panels for steel shelving with continuous tops or canopy top inset are designed to have the canopy top "inset" between the end panels.

Note: Exact height and depth of panel must be specified when ordering.

General Specifications

DESKTOP

Standard desktop is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The desk top receives a solid Northern-grown Red Oak or maple flush edge band 5/8" x 1-3/16" thick, radiused 7/8" to form a bullnose shape on the patron side. A 1/4", solid Northern-grown Red Oak or maple edge band is applied to the remaining three sides of the desk top, with top and bottom edges have a 1/8" radius. All edges are applied to the desktop after the laminate and backer sheets are applied, constituting an external edge band. Desktop is positioned over the end panels of the desk module, flush with the outside edges of the end panels.

END PANELS

Desk module end panel is 1" thick, 3-ply, 45# density particleboard core with select plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed edges are externally banded with a 1" x 1.6mm thick solid, Northern-grown Red Oak or maple veneer edge band. The end panel and front panel are joined with 3/4" x 3/4" thick solid hardwood cleats screwed to the inside surface of the panel. Each end panel receives a 3" diameter egress grommet to provide for wire passage and two adjustable glides to allow leveling of the individual units.

FRONT PANEL

The front panel is 3/4" thick, 45# density particleboard core comprised of select rift cut Northern-grown Red Oak veneers or maple plain sliced slip matched veneers. Exposed edges are externally banded with a solid 3/4" x 1.6mm thick, veneer edge band. A 6"H x 3/4"D recessed, ebonized toe space is incorporated at the bottom of the panel. The front panel is positioned over the end panels of the desk module, flush with the outside edges of the end panels. Double wide units have two front panels to give the appearance of two individual units.

WORK SURFACE

Work surface is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The exposed edge receives a 1/4" thick, Northern-grown Red Oak or maple solid internal edge band in straight design. The back edge of the work surface has a plastic black strip, 1-1/2"W, which projects above the work surface 1/4" to act as a retainer. The work surface is 24-1/2"D and is positioned 1-1/2" away from the front panel, creating a cord drop space. Adjustable work surfaces positioned at heights of 36", 32" or 27" are available in single wide standing height desks.

Note: See Brodart optional electrical accessories for electrical power-distribution system for desk modules.

SHELVES

Shelves are constructed of 7-ply, furniture-grade veneer-core hardwood plywood, with Northern-grown Red Oak plain sliced face veneer or maple plain sliced face veneer. Exposed edges receive a 1.6mm thick, solid-oak or maple edge band.

DRAWERS

Drawers are constructed of solid Northern-grown Red Oak or maple with 1/4" thick wood bottom panel. Drawer has 3-ply particleboard fronts with select oak-face veneer or maple veneer. Box drawer has extension slides with 100# load capacity. File drawer has full-extension slides with 100# load capacity.

Maxim Series Flush Edge Band

DESK DIMENSIONS

Standing-Height Desk, overall:

39-3/16"H x 35"W x 30"D or 39-3/16"H x 70"W x 30"D.

Sitting-Height Desk, overall:

32-3/16"H x 35"W x 30"D or 32-3/16"H x 70"W x 30"D.

General Specifications

TABLETOP – 94T Series

Standard tabletops are 1-3/16" thick, 5-ply solid plywood or 1-3/16" thick particleboard core, including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are solid Northern-grown red oak. Drop edge band is 5/8" thick x 1-5/8", externally banded to form a bullnose with a 1/4" radius at corners.

APRON (OPTIONAL)

A 1-3/4"W x 25/32" Northern-grown red oak apron is fitted between the legs and behind the extended tabletop edge band. A 1/4" styling line, routed into the apron, highlights the tabletop and legs. The bottom edge and both ends of each apron receive a 1/2" radius.

Aprons on round tables are fitted between the legs and follow the curvature of the edge band. (Aprons are an optional feature on 94T Series tables).

LEGS

Legs are glued up, 2-1/4" square solid Northern-grown red oak. All vertical edges of legs receive a 1/2" radius. Bottom edges of legs are radiused 1/8". Each leg has a 2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a counter-sunk boring which accepts the upper two-thirds of the glide.

Legs attach to tabletops by means of a 5" square x 5/16" thick steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded bushings in the underside of the tabletop. Leg plates are positioned behind, and be hidden by, the extended table edge band.

TABLETOP SUPPORT

For maximum rigidity, rectangular tables 60" or more wide receive a V-shaped, 14-gauge steel keel securely fastened to the underside of the tabletop. Tables 48"D and more than 60"W, receive two steel keels parallel to the length of the table. Tables 90" or wider receive two extra legs located under the center of the table to provide added support.

Optional Wood Aprons for Tables

An Apron is a 1-3/4"W x 25/32" Northern-grown red oak apron is fitted between the legs and behind the extended tabletop edge band. A 1/4" styling line, routed into the apron, highlights the tabletop and legs. The bottom edge and both ends of each apron receive a 1/2" radius.

General Specifications

TABLETOP – 94T Series

Standard tabletops are 1-3/16" thick, 5-ply solid plywood or 1-3/16" thick particleboard core, including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are solid Northern-grown red oak. Drop edge band is 5/8" thick x 1-5/8", externally banded to form a bullnose with a 1/4" radius at corners.

CHROME PEDESTAL BASE

Pedestal base consists of a 3" diameter column that is assembled to a 22-3/8" diameter floor base using a M16 x 55mm hex head bolt. The floor base comes equipped with five nylon glides. The floor base and column are attached to the 11-13/16" square table support using an M16 x 55mm hex head bolt. This base assembly is attached to the bottom of the tabletop by eight #12 x 1" phillips pan head screws.

BLACK POWDERED-COAT PEDESTAL BASE

Pedestal base consists of a 3" diameter column that is assembled to an "x" shaped 33" base diameter. Each leg is fitted with nylon base glides. The floor base and column are attached to the 11-13/16" square table support using an M16 x 55mm hex head bolt. This base assembly is attached to the bottom of the tabletop by eight #12 x 1" phillips pan head screws.

WOOD PEDESTAL BASE

Pedestal base will be solid Northern-grown Red Oak or maple. The base consists of four assembled leg components comprised of 6/4 solid material assembled using mortise and tenon construction. The upper horizontal part of the each base leg will receive borings for attaching the assembly to the tabletop. The lower horizontal piece will receive a 1-1/2" diameter, adjustable glide mounted in a recessed tee-nut which is further recessed into the leg by means of a counter-sink boring which accepts the upper two-thirds of the glide. All pedestal base edges will receive a 1/4" radius. The four assembled base components will connect to a 2-1/4" x 2-1/4" solid Northern-grown red oak or maple post using metal to metal hardware fasteners forming a one piece pedestal. Table tops are attached to base by bolting through the upper horizontal members of base into internal and external threaded bushings embedded in the under side of the table top.

General Specifications

TABLETOPS – QUORUM 94T Series

Standard tabletop is 1-3/16" thick 3-ply particleboard core, including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Edges are solid Northern-grown red oak applied to the core after the top and bottom laminate sheets are applied. (External Edge Band). Drop edge band is 1-5/8"W and 5/8" thick and extends 3/8" below the core.

Note: Standing Height Tables are "Apron" construction.

LEGS WITHOUT APRON

Legs are glued up, 2-1/4" square Northern-grown red oak. All vertical edges of legs receive a 1/2" radius. Bottom edges of legs are radiused 1/8". Each leg has a 2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a counter-sunk boring which accepts the upper two-thirds of the glide. Legs attach to tabletops by means of a 5" square x 5/16" thick cold-rolled steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded bushings in the underside of the tabletop. Leg plates are positioned behind and hidden by the extended table edge band.

LEGS WITH APRON

Legs are glued up, 2-1/4" Northern-grown red oak. All vertical edges of legs receive a 1/2" radius. Bottom edges of legs are radiused 1/8". Each leg has a 2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of counter-sunk boring which accepts the upper two-thirds of the glide. Legs attach to the aprons by means of formed 14-gauge steel corner brackets. Each leg is bolted to the corner bracket with two 5/16" -18 hex-head bolts per leg.

LEG (CENTER)

Additional leg(s) added to the center of the table for extra support are 2-1/4" square with a 1/2" radius on vertical edges.

APRON

A 3-1/2" W x 1" thick solid Northern-grown red oak apron is fitted between the legs and behind the extended tabletop edge band. A 1/4" styling line, routed into the apron, highlights the tabletop and legs. Bottom edge and both ends of each apron receive a 1/2" radius. Aprons are secured to the tabletop by attaching hardwood cleats to the inside surface of aprons and screwing through the cleats into the underside of the tabletop.

PRIVACY PANEL

Privacy panels are 10"H, constructed of 1" thick veneered particleboard. Exposed panel edges are banded with 1.6mm solid oak. The privacy panel attaches securely to the tabletop by screws passing through the tabletop and into the privacy panels and is finished to match the table. Privacy panel is designed to obscure wires exiting computer equipment and to eliminate incidental tampering.

COMPUTER SHELF

Shelf is manufactured from steel. The shelf is 8-3/4" below the work surface and is 23"W x 17"D and is mounted under tabletop.

ELECTRICAL

Tables receive 3" grommets in tabletop for wire passage, and J-channel wire managers mounted under tabletop to hold excess wires. Grommets are ABS, black plastic, with notched removable cap. J-channel is 18-gauge steel with electrostatically applied black powder paint.

TABLETOP HEIGHT

Standing Height: 39" (with Apron)

Sitting Height: 27-1/2" (without Apron)

General Specifications

WORK SURFACE

Work surfaces are 27-1/2"D, available in two widths: 48" and 36", and adjustable in heights to 27", 32" and 39".

Work surfaces are 1-3/16" thick, 3-ply particleboard core, including a top surface of .050" thick, high-pressure laminate with a backing sheet no less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Front edges of work surfaces have 1-5/8" x 5/8" solid-oak drop edge band which extends 3/8" below the work surface. The back edge of the top has a black plastic band 1-1/2"W which projects above the work surface 1/4" to act as a retainer. A 1-1/2"W cord drop is located at the back of the work surface.

PANELS

End and intermediate panels are 3/4" thick x 32-1/2"H x 30"W, comprised of select face veneers of Northern-grown red oak over a 45# particleboard core. Panels are banded on the top and bottom with 1.6mm thick solid oak. Panels are mechanically fastened to the back panel. Back panels are 32-1/2"H. Back panel construction is the same as end and intermediate panels.

POSTS

Posts are 1-3/4" square, with 1/8" grooved to receive panels in one-, two-, three- and four-way configurations. Each post has a 1-1/4" diameter, adjustable glide.

SHELF

A 12"D storage shelf, located under the work surface and extends the full width of the station.

ELECTRICAL

To hide excess wires, a 1-1/2" separation between the work surface and back panel is provided.

WORK SURFACE HEIGHTS

Adjustable at 27", 32" and 39".

General Specifications

WORKSTATIONS

Workstations are of modular starter and adder design, with an overall height 33". Workstations are available in 36", 48", 72", 96", and 108" widths. A knee-space panel located below the work surface supports all work surfaces greater than 48" W. Work surface height is at 27-1/2". Work surface depth is 27-1/2" with an additional 1-1/2"W cord drop between the work surface and back panel to allow passage of electrical cords. Work surface is attached to end and intermediate panels by means of two metal 22-1/2" long "Z" brackets with 5/16" – 18 hex-head bolts engaging internally and externally threaded bushings embedded into panels. The back panel is attached to end and intermediate panels using hidden metal keyways and shoulder screws. The shelf is attached to end and intermediate panels and back panels with 3/4" x 3/4" steel, black painted angle brackets and black #8 screws.

WORK SURFACE

Standard work surface is 1-3/16" thick, 3-ply, 45# density particleboard including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Front edges of work surfaces have a 5/8" x 1-3/16" solid oak edge band in a half-round bullnose shape. The back edge of the top has a black plastic band 1-1/2"W which projects above the work surface 1/4" to act as a retainer.

END AND INTERMEDIATE PANELS

End and intermediate panels are 1-1/8" thick, 45# density particleboard core with select face veneers of Northern-grown red oak. All edges are banded with a 5/8" bullnosed solid-oak edge band. Intermediate panels receive a 3" diameter grommet below the work surface to allow passage of electrical and data wires. Each panel receives two 1-1/4" adjustable glides.

BACK PANEL

Back panel is 3/4" thick, 45# density particleboard core with face veneers of select Northern-grown red oak. The top and bottom edges of the back panel receives 5/8" bullnosed solid oak edge bands. Back panels attach to end and intermediate panels by means of recessed metal fasteners and shoulder screws. The back panel on double-faced units receive a 3" diameter grommet located below the work surface to allow passage of electrical and data wires.

SHELF

Shelf is 3/4" thick x 8"D 45# density particleboard core with face veneers of select Northern-grown red oak. Shelf is banded on the front edge with a 1.6mm solid oak band. Shelf attaches to end and intermediate panels by means of a pair of metal "L" brackets. Back corners of shelf have a 3" x 3" cutout to allow for the passage of electrical cords. The shelf is positioned 10" below the bottom of the work surface.

WIRE MANAGEMENT DOOR

The wire management door is positioned between the bottom of the work surface and the shelf and is designed to form a concealed wire management channel 8-1/2"H x 9-1/2"D. The door is 1/4" thick with select oak face veneers. The door slides in two aluminum tracks, one that is attached to the bottom of the work surface while the other is attached to the top of the shelf.

KNEE-SPACE PANEL

All 72" and 96"W workstations, as well as functional corner units, have a knee-space panel positioned under the work surface for additional work-surface support. Units 108" W have two knee-space panels. The knee-space panel is 1-1/8" thick, 45# density particleboard core with select face veneers of Northern-grown red oak. The panel is banded on exposed edges with a 1.6mm solid oak band. The knee-space panel is attached to the back panel using a 1-3/4" square, solid-oak post, grooved to receive the knee space panel and back panels. Panels attach to the post using recessed metal fasteners and shoulder screws. The knee-space panel is angled in the back to create a space to allow passage of electrical and data cords. The knee-space panel receives two 1-1/4" diameter black adjustable glides.

General Specifications

TOP

Top is 1-3/16" thick, 3-ply particleboard core including a top surface of .050" thick, high-pressure laminate with a backing sheet not less than .020" thick for balanced construction. The high-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining in accordance with NEMA standards. Front edges of work surfaces have a 5/8" thick solid-oak flush edge band.

VERTICAL PANELS

Full panels are 1-3/16" thick and comprised of select face veneers of Northern-grown red oak over a particleboard core. Panels are externally banded on all four sides with a 5/8" thick solid-oak edge band in straight design. Panels receive 1/2" radius on all corners. The bottom of each panel has two flush-mounted tee-nuts to receive a 1-1/4" diameter, rubber-cushioned chrome glide. Panels are equipped with grommets to allow wire passage from station to station.

BACK PANELS

Back panels are 1-3/16" thick and comprised of select face veneers of Northern-grown red oak over particleboard core. The panel is externally banded on the top and bottom edge with a 1.6mm band. The panel attaches to the corner posts by means of mechanical fasteners.

ELECTRICAL ACCESS DOOR

(One for each 3- or 6- station unit) Access door is 3/4" thick and comprised of select face veneers of Northern-grown red oak over a particleboard core. Panel is externally banded on all four sides with a 1.6mm solid-oak edge band. Access door has a full length hinge and lock and can be located in any one of the back panels on the station.

CENTER CAP

Cap is constructed of 3/4" plastic and backer. Available in full-hexagon or half-hexagon configuration, the cap closes the center opening by mounting at the top rear edge of end panels on systems arranged in full- or half-hexagon configuration.

AVAILABLE WORKING SPACE

Depth of monitor and keyboard combined cannot exceed 29".

WORKING SPACE HEIGHTS

Working space is adjustable to:

Standing Height: 39"

ADA Height: 32"

Sitting Height: 27"

General Specifications

DESKTOPS

Standard desktop is 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading and staining that meets or exceeds NEMA standards. The desk top receives a solid Northern-grown Red Oak or maple edge band 5/8" thick x 1-3/16" formed in a bullnose shape. All edges are applied to the desktop after the laminate and backer sheets are applied, constituting an external edge band.

END PANEL

End panels are 1-3/16" thick, 3-ply, 45# density particleboard core with select plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed vertical edges are externally banded with a 5/8" thick x 1-3/16" solid, Northern-grown Red Oak or maple edge band formed in a bullnose shape. Top and bottom of the end panels are banded with a 1/8" x 1-3/16" edge band with the edges eased.

FRONT PANEL

The front panels are 1-3/16" thick, 3-ply, 45# density particleboard core with select plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed vertical edges are externally banded with a 5/8" thick x 1-3/16" solid, Northern-grown Red Oak or maple edge band formed in a bullnose shape. Top and bottom of the end panels are banded with a 1/8" x 1-3/16" edge band with the edges eased.

SHELVES

Shelves are constructed of 7-ply, furniture-grade veneer-core hardwood plywood, with Northern-grown Red Oak plain sliced face veneer or maple plain sliced face veneer. Exposed edges receive a 1.6mm thick, solid-oak or maple edge band.

DRAWER

Drawer is constructed of solid Northern-grown Red Oak or maple with 1/4" thick wood bottom panel. Drawer has 3-ply particleboard fronts with select oak-face veneer or maple veneer. Box drawer has extension slides with 100# load capacity. File drawer is letter size and has full-extension slides with 100# load capacity. File drawers also have hangers to conveniently support hanging files.

Sloped top is 1-3/16" thick, 3-ply particleboard including a top surface of .050" thick high-pressure laminate with a backing sheet not less than .020" thick. Edge band of sloped top is 1-3/16" x 5/8" solid oak, applied to all exposed edges forming a half-round bullnose shape. Edge band is applied after the top and bottom laminate sheets are applied (External Edge Band). A 5/8" x 5/8" book retainer is positioned along the bottom edge of sloped top. The full height 1/2" plywood back is recessed into the end panels. Inside faces of end panels allow for shelf adjustment on 1/2" center. Bottom shelf is stationary. End panels are 1-3/16", 7-ply veneer-core plywood construction with select oak-veneer facings. Vertical edges receive 1/2" solid oak banding, radiused 1/4".

Sloped top is 1-3/16" thick, 3-ply particleboard including top surface of .050" thick high-pressure laminate with a backing sheet not less than .020" thick. Edge band of sloped top is 1-3/16" x 5/8" solid oak, applied to all exposed edges forming a half-round bullnose shape. Edge band is applied after the top and bottom laminate sheets are applied (External Edge Band). A 5/8" x 5/8" book retainer is positioned along the bottom edge of sloped top. End panels and back panel are 1-3/16", 7-ply veneer-core plywood construction, with select oak-veneer facings. Vertical edges receive 1/2" solid-oak banding, radiused on 1/4". Sides and back are tenoned together. Each unit has five pullout shelves on nylon rollers. Stops on shelves prevent accidental removal. Shelves are 25-3/4"W x 23-7/8"D, with 3" between shelves. Children's height unit contains four pullout shelves with 2-1/2" between shelves.

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

Picture Book Table	94T-142-S00 OAK	94T-142-S00 MAP	Picture Book Table	33-1/2" x 78" x 32"	190	\$3,509	\$3,825

The table consists of two 78"W x 15-1/2" D x 1-3/16" thick tops mounted on a 27° angle. The lower edge of the tops are 26-1/2" from the floor. A 5/8" square retaining strip is screwed onto each top near the lower edge. A space of 3" is allowed between the tops to serve as a full-width book well.

Table base construction, including legs, accent strip, tabletop support and tabletop edge treatment, is the same as the series you are ordering. (See reading table specifications for series required.)

Bench	94T-147-S00 OAK	94T-147-S00 MAP	Bench	15-3/4" x 69" x 11"	50	\$1,195	\$1,303
--------------	-----------------	-----------------	-------	---------------------	----	---------	---------

The seat is 3/4" thick edge-banded plywood supported by a 3-1/2" x 3/4" apron on all four sides. Legs attach to the aprons by means of formed 14-gauge steel corner brackets. Each leg is bolted to the corner bracket with two 5/16"-18 hex-head bolts per leg.

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

TOPS – WOOD AND STEEL SHELVING

Tops are 1-3/16" thick, 3-ply, 45# density particleboard core, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. The continuous top receives a solid Northern-grown Red Oak or Maple flush edge band, 5/8" x 1-3/16" thick, radius 1/2" to form a bullnosed shape. The maximum width of any shelving top segment is 108". This covers a range of three standard shelving sections. Tops wider than 108" are built in multiple sections by the factory, based on the total number of shelving units in the shelving range. Joints are set so they coincide with the joint in the shelving sections. Tops are splined at the joints so they can be leveled. Tight Joint fastener routes and hardware are provided. Brodart shelving tops overhang approximately 5/8". Single-faced tops are not banded on the back edge.

WOOD SHELVING TOPS

Single-Faced Tops are banded on both ends and on the front edge only. Back edge is not banded. Double-Faced Tops are banded on both ends and on the front and back edges.

STEEL SHELVING TOPS

Single-Faced Tops are banded on the front edge only. Back edge and sides are not banded. Double-Faced Tops are banded on the front and back edges only.

Exact width and depth of steel shelving tops must be specified when ordering.

Note: Edge Band on long side only. Tops are designed to be inset between end panels. If edge bands are desired on short edges, please enter the part as a modification and specify which bands to be included.

To ensure that tops for steel shelving work with each manufacturer and top method, please specify the exact width and depth of tops. Add 15% for HPL on top and bottom (Steel Shelving ONLY).

Please specify Wood Finish (Table 1) and High-Pressure Laminate (Table 2). Details can be found on page GEN 4.

General Specifications

END PANELS

End panels are 1-3/16" thick, 3-ply particleboard with select oak-veneer faces. All edges are externally banded with 5/8" solid red-oak bullnose edge bands. All edges are eased. End panels are not machined. No fastening hardware is provided with end panels.

End panels for steel shelving with continuous tops or canopy top inset are designed to have the canopy top "inset" between the end panels.

Note: Exact height and depth of panel must be specified when ordering.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply, 45# density particleboard core with a .050" thick, high-pressure laminate top sheet and a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining. Edges are solid Northern-grown red oak. The external drop edge band is 5/8" thick x 1-5/8"W, externally banded to form a bullnose.

LEGS

Legs are glued up, 2-1/4" solid Northern-grown red oak, radiused 1/2" on vertical edges. Each leg has a 2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a counter-sunk boring which accepts the upper two-thirds of the glide. Legs attach to tabletops by means of a 5" square x 5/16" thick steel plate. The plate is attached to the leg by a 5/16" x 3" machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded steel bushings in the underside of the tabletop. Leg plates are positioned behind, and hidden by the extended table edge band.

General Specifications

TABLETOP FOR WOOD VENEER

Tabletop will be 1" thick veneered particleboard, with .020" thick veneer on both faces. Wood veneer tops receive a 1/4" thick x 1"W wood (Maple, Oak or Walnut) edge band.

Edge Detail

2MM PVC ON TFL
Edge Detail

TABLETOP FOR THERMALLY-FUSED LAMINATE (TFL)

Tabletop will be 1" thick MDF, with .020" thick thermally-fused laminate on both faces. TFL tops receive a PVC edge band which will be flexible polyethylene, 2mm thick x 1"W.

TABLETOP FOR HIGH-PRESSURE LAMINATE (HPL)

Tabletop will be 1" thick particleboard, with .035" thick high-pressure laminate surface and .020" thick backing sheet for balanced construction. High-pressure laminate tops receive a PVC edge band which will be flexible polyethylene, 2mm thick x 1"W or a 5/8" thick x 1-1/16"W wood (Maple or Oak) edge band.

HPL WITH WOOD
Edge Band

2MM PVC ON HPL
Edge Detail

PATH LEGS (METAL)

Legs will be 2" x 2" steel square tubing with a wall thickness not less than 2mm. Legs are supplied with a standard glide insert. Metal legs attach to table top by means of a flange welded to the leg. Attachment flange will be 3-3/4" x 3-3/4" metal plate formed and welded on two sides to the leg. Each leg attachment flange is attached to the metal apron support frame using four #8 x 3/4" screws and then attached to the underneath of the tabletop by five #12 x 3/4" screws. Legs will be finished with electrostatic applied epoxy powder-coat paint.

Metal Path
Leg Detail

BLADE LEGS (METAL)

Legs will be 1" x 3" steel rectangular tubing with a wall thickness not less than 2mm. Legs are supplied with a standard glide insert. Metal legs attach to table top by means of a flange welded to the leg. Attachment flange will be 3-3/4" x 3-3/4" metal plate formed and welded on two sides to the leg. Each leg attachment flange is attached to the metal apron support frame using four #8 x 3/4" screws and then attached to the underneath of the tabletop by five #12 x 3/4" screws. Legs will be finished with electrostatic applied epoxy powder-coat paint.

Metal Blade
Leg Detail

APRON SUPPORT FRAME

A metal frame 1"W x 2"H x 2mm thick in various lengths will be attached to underneath of the tabletop using #12 x 3/4" screws. Each leg attachment flange will be attached to the apron support frame using four #8 x 3/4" screws.

General Specifications

TABLETOP

Tabletop is 1-3/16" thick, 9-ply solid hardwood plywood or 3-ply 45# density particleboard, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. Edges are solid Northern-grown Red Oak or maple. Top receives an external solid drop edge Northern-grown Red Oak or maple band 5/8" x 1-5/8" thick, radiused to form a bullnose.

APRON (Optional)

A 1-3/4" W x 25/32" Northern-grown Red Oak or maple apron is fitted between the legs and behind the extended tabletop edge band. A 1/4" styling line, routed into the apron, highlights the tabletop and legs. The bottom edge and both ends of each apron receive a 1/2" radius. Aprons are attached to the table using wood cleats screwed to the underside of the tabletop. Aprons on round tables go straight between the legs.

LEGS

Legs are 2-3/8" round steel tubing with a wall thickness not less than .64". Legs are finished with electrostatically applied epoxy powder paint. Legs are supplied with a standard glide insert. Lockable caster inserts interchange with the glide insert on any leg. Table legs are attached to the tabletop by means of a flange welded to the leg tube. The attachment flange is 4-5/8" in diameter formed and welded on two sides. The leg flange is attached to the tabletop by six (6) 1/4"-20 x 1" bolts engaging 1/4" internally and externally threaded bushings embedded in the underside of the tabletop.

CASTERS (Optional)

When specified, a three-inch black nylon hooded twin-wheel caster with a brake is supplied. Lockable caster inserts interchange with the glide insert on any leg. Add one caster per table leg (sold each).

TABLETOP SUPPORT

For maximum rigidity, rectangular tables 60" wide or more receive a V-shaped, 14-gauge steel keel securely fastened to the underside of the tabletop. Tables 48"D and more than 60"W, receive two steel keels parallel to the length of the table. Tables 90" or wider receive two extra legs located under the center of the table to provide added support.

General Specifications

TABLETOPS

Tabletop is 1-3/16" thick, 3-ply 45# density particle board, with a high-pressure laminate top surface .050" thick and a backing sheet .020" thick for balanced construction. Edges are solid Northern-grown Red Oak or maple. Top receives an external solid drop edge Northern-grown Red Oak or maple band 5/8" x 1-5/8" thick, radiused to form a bullnose.

Note: Standing Height Tables are Apron construction.

TABLE SUPPORT

For maximum rigidity, rectangular tables 60" or more wide receive a V-shaped, 14-gauge steel keel securely fastened to the underside of the tabletop. Tables 48"D and more than 60"W, receive two steel keels parallel to the length of the table. Tables 72" or wider receive two extra legs located under the center of the table to provide added support.

LEGS

Legs are 2-3/8" round steel tubing with a wall thickness not less than .64". Legs are finished with electrostatically applied epoxy-powder paint. Legs are supplied with a standard glide insert. Lockable caster inserts interchange with the glide insert on any leg. Table legs are attached to the tabletop by means of a flange welded to the leg tube. The attachment flange is 4-5/8" in diameter formed and welded on two sides. The leg flange is attached to the tabletop by six (6) 1/4" - 20 x 1" bolts engaging 1/4" internally and externally threaded bushings embedded in the underside of the tabletop.

CASTER (OPTIONAL)

When specified, a three-inch black nylon hooded twin-wheel caster with a brake is supplied. Lockable caster inserts interchange with the glide insert on any leg. Add one caster per table leg (sold each).

PRIVACY PANEL

Privacy panels are 10"H, constructed of 1" thick, 3-ply veneered particleboard. Exposed edges are banded with 1.6mm oak or maple edge bands. The privacy panel attaches securely to the tabletop by screws passing through the tabletop and into the privacy panels. The privacy panel is finished to match the table and designed to obscure wires exiting computer equipment, to eliminate incidental tampering and create defined patron space.

Note: 72"W and 90"W tables with privacy panels have additional legs for added support.

APRON (OPTIONAL)

A 1-3/4"W x 25/32" solid Northern-grown Red Oak or maple apron is fitted between the legs and behind the extended tabletop edge band. A 1/4" styling line, routed into the apron, highlights the tabletop and legs. The bottom edge and both ends of each apron receive a 1/2" radius. Aprons are attached to the table using wood cleats screwed to the underside of the tabletop. Aprons on round tables go straight between the legs.

ELECTRICAL

Each position on a Computer Table receives one 3" diameter grommet for wire passage and J-channel wire manager to hold excess wires. Grommets are ABS black plastic with notched removable cap. J-channel is 18-gauge steel with electro-statically applied black powder paint and is mounted to the underside of the tabletop.

General Specifications

TABLETOP

Tabletop will be 1-3/16" thick, 3-ply 45# density particleboard, with .050" thick high-pressure laminate surface and .020" thick backing sheet for balanced construction. Edges will be flexible polyethylene tee mold, 5/16" thick x 1-1/4" wide. Core material receives a 5/64" x 3/8" route to receive tee mold. Tee mold is applied to core material after the laminate and backer sheet.

LEGS (WOOD)

Legs are 2-1/2" round solid Northern-grown red oak. Bottom edges of legs are radiused 1/8". Each leg has a 2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of a counter-sunk boring which accepts the upper two-thirds of the glide. Legs attach to tabletops by means of a 5" square x 5/16" thick steel plate. The plate is attached to the leg by a 5/16" x 2-1/2" machine bolt engaging a 5/8" diameter barrel nut inserted into the leg. The steel plate is attached to the tabletop by five 5/16" x 1" machine bolts engaging internally and externally threaded bushings in the underside of the tabletop.

CASTER (FOR WOOD LEG)

When specified, a 3" black nylon hooded twin-wheel caster with a brake is supplied. Add one caster per table leg (sold each).

LEGS (METAL)

Legs will be 2-3/8" round steel tubing with a wall thickness not less than .64". Legs are supplied with a standard glide insert. Lockable caster inserts interchange with the glide insert on any leg. Table legs will be attached to the tabletop by means of a flange welded to the leg tube. The attachment flange will be 4-5/8" in diameter formed and welded on two sides. The leg flange is attached to the tabletop by six (6) 1/4"-20 x 1" bolts engaging 1/4" internal and external threaded bushings embedded in the underside of the tabletop. Legs will be finished with electrostatic applied epoxy powder-coat paint.

CASTER (FOR METAL LEG)

When specified, a 2-1/4" black nylon hooded twin-wheel caster with a brake is supplied. Lockable caster inserts interchange with the glide insert on any leg. Add one caster per table leg (sold each).

Toll-Free: 888-521-1884 • E-Mail: furniture@brodart.com • www.brodartfurniture.com

General Specifications

CONSTRUCTION

Shelving construction is modular type, utilizing all natural hardwoods. No particleboard or synthetic materials will be used. Shelving units are designed with the starter and adder concept and measure 36-3/16" from center to center of the uprights. Oak and Maple are the standard wood species for Brodart shelving.

END PANELS

End panels are 1" thick, 9-ply Formaldehyde-free hardwood veneer core plywood. All exposed vertical and top edges are banded with matching solid Northern-grown Oak or Maple hardwood. Edges are square, but eased. Vertical rows of holes are drilled near the front and rear of each panel for shelf adjustment on 32mm centers. Panels are drilled at front, rear, top, and bottom for embedding internal and external threaded bushings. Tops and bases are attached to end panels with 5/16" - 18 x 2" hex-head bolts and washers. Lag bolts or wood screws are not used. Clip and metal strip style shelf attachments are available if specified.

INTERMEDIATE UPRIGHTS

Intermediate uprights are 1" thick, 9-ply Formaldehyde-free hardwood veneer core plywood. All exposed vertical and top edges are banded with matching solid Northern-grown Oak or Maple hardwood. Edges are square, but eased. Shelf pinholes are bored on both sides of the panel but staggered so that pins can be deeply seated. Panels are drilled through at front, rear, top, and bottom for attachment of tops and bases with 5/16" - 18 x 4-1/2" hex-head bolts, nuts, and washers. Clip and metal strip style shelf attachments are available if specified.

BASE

The base front is 4"H X 3/4" thick solid Northern-grown Oak or Maple hardwood. A 2" x 3/4" rail is tenoned full-length to the inside of the front. Bolting cleats 1-1/4" x 1-1/4" are glued and stapled perpendicular at the ends of the rail and drilled to allow assembly bolts to pass through. A second full-length rail is glued and stapled to the rear of the bolting cleats for support and proper alignment. Bases are manufactured so the base shelf rests on the bolting cleats set behind and flush with the top of the base front.

ATTACHMENT

Four bolts are used to attach each single-faced base or top, except for 16"D single-faced units, on which six bolts are used. Eight bolts are used to attach each double-faced base or top, except for 32"D double-faced units, on which twelve bolts are used. All hardware is concealed from view after assembly. Each single-faced unit is supplied with a metal bracket, lead anchor, and screws for fastening to the wall. Double-faced ranges that do not have partitions receive two steel sway bars per range, 46-7/8" long and 5/16" square. These attach to the starter panel at both sides of the range and the adjoining intermediate panel with screws.

BACKS AND PARTITIONS

Backs and partitions are constructed of 3-ply or 5-ply furniture-grade Oak or Maple veneered plywood finished to match shelving. Backs are finished on one side and used with single-faced shelving. Partitions are used with double-faced shelving, and therefore finished on both sides. Economical painted backs and partitions are also available upon request.

Note: Backs and partitions do not function with "Book Stop" shelving.

Note: Clip and Strip shelving is available for Wood Shelf units ONLY and can be ordered by changing the S1 prefix on the starter unit to S3, and changing the S2 prefix on the adder unit to S4. i.e.: S3-861-S00 or S4-861-S00.

General Specifications - Tops

WOOD SHELVING TOPS

Cornice tops have a 2-1/8" fascia, 3/4" thick, of solid Northern-grown Oak or Maple hardwood banded to a 3/4" 7-ply hardwood plywood panel of specified depth. The top front corner of the fascia has a 1/8" radius. On the inside surface of the top at each end, butted to the fascia, are solid hardwood bolting cleats 1-1/4" x 1-1/4" that are both glued and stapled. For additional strength, a 4" cleat is added at the intersection of the fascia and top panel. Bolting cleats are drilled to allow assembly bolts to pass through.

Note: Tops on 72"H, 82"H, and 90"H units are inverted.

SUB TOPS FOR CONTINUOUS SHELVING TOPS

Sub tops are constructed using solid hardwood cleats and plywood components. Tops have a 2-1/8" fascia, 3/4" thick, of solid Northern-grown Oak or Maple hardwood banded to the front.

Note: Sub-tops for shelving (to accept continuous HPL Tops - sold separately) are available and can be ordered by changing the S00 extension on the catalog number to S02. i.e.: S1-861-S02.

Sub-Top

INDIVIDUAL HIGH-PRESSURE LAMINATE TOPS

Cornice tops have a 2-1/8" fascia, 3/4" thick, of solid Northern-grown Oak or Maple hardwood banded to a 3/4" 3-ply 45# density particleboard panel of specified depth, that consists of a top surface of .050" thick high-pressure laminate, with a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards.

Note: Individual HPL tops for shelving are available and can be ordered by changing the S00 extension on the catalog number to S03. i.e.: S1-861-S03.

Individual High-Pressure Laminate Top

SHELVING TOPS (High-Pressure Laminate and Continuous)

To order wood shelving with individual high-pressure laminate tops use the standard shelving part number, changing the S00 to S03. Tops are available in 42" and 60-1/2"H units. If 72" or 82" is required, order as M03.

To order wood shelving with sub tops for use with continuous shelving tops, use the standard shelving part number changing the S00 to S02. The sub tops are available in 42", 48", and 60-1/2"H units.

Note: Continuous tops must be ordered separately.

Shelving Starter/Adder with Sub-Top and Continuous Top

General Specifications - Shelves & Mobile Units

WOOD SHELVES

Shelves are 3/4" thick, glued-up solid Northern-grown Oak or Maple hardwood. Random widths no more than 4" or less than 1-1/2" are used. To ensure adequate support for heavy volumes, no substitute for solid hardwood is permitted. Adjustable shelves are grooved 11/32" diameter half round on the underside to set firmly on 1" long, 5/16" diameter threaded shelf pins, cadmium-plated. Shelf depths are nominal.

OMEGA (STEEL) SHELVES

Omega (steel) shelves are designed to fit Brodart's wood shelving units. These shelves are 18-gauge steel stamped with notches in the bottom edge to fit over shelf pins. The front and back edges are triple bent for strength and to eliminate sharp edges. Shelves are electrostatic powder-coat painted with epoxy paint and oven cured. Shelf accepts spring-type overhead wire book support. Units are supplied with a wood base shelf. Omega shelves are available in many standard and optional colors - please call for selection.

OMEGA "BOOK STOP" STEEL SHELVES

Omega "Book Stop" steel shelves are designed to fit Brodart's wood shelving units. These shelves are 18-gauge steel stamped with notches in the bottom edge to fit over shelf pins. The front and back edges are triple bent for strength and to eliminate sharp edges. **The back edge of the shelf is bent upward to form a 90° angle,** 1-5/8"H above the shelf surface to function as a book stop. Shelves are electrostatic powder-coat painted with epoxy paint and oven cured. Units are supplied with a metal base shelf. Omega shelves are available in many standard and optional colors - please call for selection.

Note: Backs and partitions do not function with "Book Stop" shelving.

MOBILE SHELVING UNITS

Mobile Shelving is available on 42", 48", and 60-1/2" units. Shelving construction is the same as the standard shelving with the exception of the base. The base facing is 4-3/8"H, receives four reinforced 14-gauge corner brackets with four 2-1/2" heavy-duty swivel casters attached to a 14-gauge caster bracket. Corner brackets are attached to the end panel and the base facing. The caster assembly is hidden within the base, giving the appearance of standard unit. All mobile units receive partitions, with the exception of Omega Book Stop units, which receive sway braces. Units are offered as starter or starter/adder only.

PICTURE BOOK SHELVING SHELVES

Picture Book Shelving is 12"D with six (6) hardboard dividers per shelf. A 2"H, solid wood back keeps dividers in place.

GLASS DOOR SHELVING

Each unit has sliding 1/4" thick laminated glass doors to protect shelved items. A solid back and door lock ensures safe storage. Door pulls are provided. Doors slide smoothly in aluminum tracks at top and bottom. Wood shelves are 9"D.

TILT AND STORE SHELVING

Sloping display shelves have a 13"H clear display area and lift up to expose flat storage shelves via a pivot hinge. Storage space is concealed when display shelves are in normal position.

METAL PICTURE BOOK SHELVING

Metal Picture Book Shelves are 11"D x 7"H overall with two metal dividers per shelf. Dividers can be placed at 26 equal spaces along the width of each shelf. A steel cotter pin is provided with each divider to prevent removal.

PERIODICAL SHELVING

Periodical shelving can display any type of media such as CD's, videocassettes, books and magazines. The shelf can be divided with the six dividers provided with each shelf. Each sloping display shelf will have a 13-3/4"H clear display area.

Classic Shelving

Tilt and Store Shelving

Sloping display shelves have a 13"H clear display area and lift up to expose flat storage shelves via a pivot hinge. Storage space is concealed when display shelves are in normal position.

Note: Tilt and Store Shelving is available in 16" depth ONLY.

General Specifications

CONSTRUCTION

Shelving construction is modular type, utilizing thermally-fused laminate panels. Shelving units are designed with the starter and adder concept and measure 36" from center to center of the uprights. Bannister Oak, Biltmore Cherry, Classic Maple, Canadian Gray, Classic Black and Bright White are the standard finishes for Reprise shelving uprights, tops and bases. Shelves are available in Orange, Red, Plum, Island Green and Lapis Blue in addition to the colors listed previously.

END PANELS

End panels are 1" thick thermally-fused laminate panels. All exposed vertical and top edges are banded with matching 2mm PVC edge banding. Edges are square, but eased. Vertical rows of holes are drilled near the front and rear of each panel for shelf adjustment on 32mm centers. Panels are drilled at front, rear, top, and bottom for embedding internal and external threaded bushings. Tops and bases are attached to end panels with 5/16" - 18 x 2" hex-head bolts and washers. Lag bolts or Laminate screws are not used. Clip and metal strip style shelf attachments are available if specified.

INTERMEDIATE UPRIGHTS

Intermediate uprights are 1" thick thermally-fused laminate panels. All exposed vertical and top edges are banded with matching 2mm PVC edge banding. Edges are square, but eased. Shelf pinholes are bored on both sides of the panel but staggered so that pins can be deeply seated. Panels are drilled through at front, rear, top, and bottom for attachment of tops and bases with 5/16" - 18 x 4-1/2" hex-head bolts, nuts, and washers. Clip and metal strip style shelf attachments are available if specified.

BASE

The base front is 4"H x 3/4" thick thermally-fused laminate panel with matching 2mm PVC edge banding on top and bottom edges. A 2" x 3/4" rail is tenoned full-length to the inside of the front. Bolting cleats 1-1/4" x 1-1/4" are glued and stapled perpendicular at the ends of the rail and drilled to allow assembly bolts to pass through. A second full-length rail is glued and stapled to the rear of the bolting cleats for support and proper alignment. Bases are manufactured so the base shelf rests on the bolting cleats set behind and flush with the top of the base front.

ATTACHMENT

Four bolts are used to attach each single-faced base or top, except for 16"D single-faced units, on which six bolts are used. Eight bolts are used to attach each double-faced base or top, except for 32"D double-faced units, on which twelve bolts are used. All hardware is concealed from view after assembly. Each single-faced unit is supplied with a metal bracket, lead anchor, and screws for fastening to the wall. Double-faced ranges that do not have partitions receive two steel sway bars per range, 46-7/8" long and 5/16" square. These attach to the starter panel at both sides of the range and the adjoining intermediate panel with screws.

BACKS AND PARTITIONS

Backs and partitions are constructed with 1/4" thick thermally-fused laminate panels.

Note: Backs and partitions do not function with "Book Stop" shelving. Clip and Strip shelving is available for Laminate Shelf units **ONLY** and can be ordered by changing the **RP1** prefix on the starter unit to **RP3**, and changing the **RP2** prefix on the adder unit to **RP4**. i.e.: **RP3-861-S00** or **RP4-861-S00**.

General Specifications - Shelves & Shelving Tops

LAMINATE SHELVES

Shelves are 3/4" thick, thermally-fused laminate, banded on front and back with matching 2mm PVC edgebanding. To ensure adequate support for heavy volumes, a 3/4" thick, 1-1/4" wide support member is attached to the back edge of the bottom of each shelf. Adjustable shelves are grooved 11/32" diameter half round on the underside to set firmly on 1" long, 5/16" diameter threaded shelf pins, cadmium-plated. Shelf depths are nominal.

OMEGA (STEEL) SHELVES

Omega (steel) shelves are designed to fit Brodart's Reprise shelving units. These shelves are 18-gauge steel stamped with notches in the bottom edge to fit over shelf pins. The front and back edges are triple bent for strength and to eliminate sharp edges. Shelves are electrostatic powder coat painted with epoxy paint and oven cured. Shelf accepts spring-type overhead wire book support. Units are supplied with a laminate base shelf. Omega shelves are available in many standard and optional colors - please call for selection.

OMEGA "BOOK STOP" STEEL SHELVES

Omega "Book Stop" steel shelves are designed to fit Brodart's Reprise shelving units. These shelves are 18-gauge steel stamped with notches in the bottom edge to fit over shelf pins. The front and back edges are triple bent for strength and to eliminate sharp edges. The back edge of the shelf is bent upward to form a 90° angle, 1-5/8"H above the shelf surface to function as a book stop. Shelves are electrostatic powder-coat painted with epoxy paint and oven cured. Units are supplied with a metal base shelf. Omega shelves are available in many standard and optional colors - please call for selection.

Note: Backs and partitions do not function with "Book Stop" shelving.

SHELVING TOPS

Cornice tops have a 1-3/8" fascia, constructed with 3/4" thick, thermally-fused laminate panel with matching 2mm PVC edge banding. On the inside surface of the top at each end, butted to the fascia, is a solid hardLaminate bolting cleat 1-1/4" x 1-1/4" that is both glued and stapled. Bolting cleats are drilled to allow assembly bolts to pass through.

Note: Tops on 72"H, 82"H, and 90"H units are inverted. Continuous tops must be ordered separately.

PICTURE BOOK SHELVING

Picture Book Shelving is 12"D with six (6) hardboard dividers per shelf. A 2"H, solid wood back keeps dividers in place.

METAL TILT AND STORE SHELVING

Sloping display shelves have a 13"H clear display area and lift up to expose flat storage shelves via a pivot hinge. Storage space is concealed when display shelves are in normal position.

METAL PICTURE BOOK SHELVING

Metal Picture Book Shelves are 11"D x 7"H overall with two metal dividers per shelf. Dividers can be placed at 26 equal spaces along the width of each shelf. A steel cotter pin is provided with each divider to prevent removal.

PERIODICAL SHELVING

Periodical shelving can display any type of media such as CD's, videocassettes, books and magazines. The shelf can be divided with the six dividers provided with each shelf. Each sloping display shelf will have a 13-3/4"H clear display area.

Flat Laminate Shelf

Omega Flat Shelf

Omega Book Stop Shelf

Shelving Starter/Adder
with Continuous Top

General Specifications - Mobile Units

MOBILE SHELVING UNITS

Mobile Shelving is available on 42", 48", and 60-1/2" units. Shelving construction is the same as the standard shelving with the exception of the base. The base facing is 4-3/8"H, receives four reinforced 14 gauge corner brackets with four 2-1/2" heavy-duty swivel casters attached to a 14-gauge caster bracket. Corner brackets are attached to the end panel and the base facing. The caster assembly is hidden within the base, giving the appearance of standard unit. All mobile units receive partitions, with the exception of Omega Book Stop units, which receive sway braces. Units are offered as starter or starter/adder only.

Note: Clip & Strip Shelving CANNOT be used with Omega Shelves. Shelving Backs and Partitions CANNOT be used with Book Stop Shelving. Sway Braces included.

Shelving Backs

Except where specified, all single-faced shelving is supplied without backs. When specified, single-faced shelving is supplied with full-height and full-width 1/4" thick thermally-fused laminate panel. Backs Partitions fit into rabbets in the end panels, intermediates, tops, and base, so that edges are concealed from view after installation.

Shelving Partitions

Except where specified, all double-faced shelving is supplied without partitions. When specified, double-faced shelving is supplied with full-height and full-width 1/4" thick thermally-fused laminate panel. Partitions fit into rabbets in the end panels, intermediates, tops, and base, so that edges are concealed from view after installation.

General Specifications

CHAIR FRAME

The chair frame is constructed of 16-gauge steel tubing. All joints are mig welded. The front and back legs are 1-3/4" diameter, and the side and front stretchers are 1-1/2" x 3/4" rectangular tubing. The framing includes four metal brackets attached to the seat. The legs are equipped with rubber-cushioned glides.

CHAIR SEAT

Chair seats are 5/8" thick bent multi-ply faced with maple or rift-cut red oak as specified.

UPHOLSTERED SEAT

Upholstered seats receive 1-1/2" thick HR-55, 2.8 density 55 ILD foam prior to being covered by a selected upholstery material that is wrapped around and stapled to the underside of the seat panel.

WOOD CHAIR BACKS

Chair backs are 5/8" thick, bent multi-ply faced with maple or rift-cut red oak as specified. Adult backs are 10"H x 19-1/2"W. Youth backs are 8"H x 15-1/2"W.

UPHOLSTERED CHAIR BACKS

Upholstered chair backs have a back platen of curved plywood and receive 1" thick 1835 FR, 1.8 density, 35 ILD foam prior to being covered by a selected upholstery material that is wrapped around and stapled to the back of the platen. This upholstered back platen is then screwed to the wood back from the rear support.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections and polyurethane foam are fire rated.

Fabrics which meet Calif. Technical Bulletin #133 are available.

GLIDES

Each chair leg is equipped with a 7/8" diameter rubber-cushioned glide.

Fabric Requirements: 1-1/2 yards per chair, Non-directional, 54" wide.

Please specify Wood Finish (Table 1), Metal Color (Table 3) and Upholstery; if applicable (Table 5). Details can be found on pages GEN 4 and GEN 5.

General Specifications

CHAIR FRAME

Chair frame is 36" overall height and 18-5/8" overall width. The legs are 1-3/4" square. The back legs receive a 10° angle beginning at the top of the seat. Lower support stretcher braces will be positioned between the front and back leg 9" from the bottom and will be 1"H x 3/4" thick. There are two (2) horizontal stretchers between the support braces that measure 3/4"H x 1" thick. Seat rails are 1-1/4" x 1" thick. All joints shall be mortised, tenoned, and glued. All vertical and horizontal edges are eased.

CHAIR SEAT – WOOD

The wood seat is scooped solid wood, 1" thick, 19"W, 19"D, with notches cut in the two (2) back corners to fit around the back legs.

CHAIR SEAT - UPHOLSTERED

The chair seat is 3/4" thick plywood covered with 1-1/2" thick foam and covered with a selected upholstery material which will be wrapped around and stapled to the underside of the seat. The underside of the seat is covered with a black cambric material.

Brodart fabric selections and polyurethane foam are fire rated.

Fabrics which meet Calif. Technical Bulletin #133 are available.

CHAIR BACKS

The seat backs are 16-gauge metal, curved to fit the contour of the top back rail of the chair which is solid wood, 1-1/4"H x 1" thick and curved at a 30" radius. The backs are attached to the chair using finished wood screws. The metal is available in 5 different laser cut patterns which are electrostatic powder painted with no bare metal or sharp edges.

CHAIR ARMS

The arm is 1-3/4" square. The arm is attached 2" back from the front of the arm to a J-shaped vertical arm support that is 1-3/4" square. Vertical arm support is attached to the side seat rail with a wood lag bolt and fastened with a washer and nut. The arm is attached to the back post with a wood screw. Screw head is counter-sunk and capped with a wooden cover and sanded flush.

CHAIR GLIDES

Each chair leg is equipped with a 7/8" diameter rubber cushioned nail glide. This chair has passed the ANSI/BIFMA X5.1-2002 Type III test.

METAL BACK DESIGNS

When ordered, one of the following back designs must be specified as part of the catalog number. I.e.: an All Wood Adult Height chair in Oak wood and with the "Horizontal Slat" back design would be BBH-551-S00

Q - QUARTER CIRCLE

T - TRIANGLES

C - CIRCLES

P - PICTURE FRAME

H - HORIZONTAL SLATS

When ordered, one of the following back designs must be specified as part of the catalog number. Example: an All Wood Adult Height chair in Oak wood with the "Horizontal Slats" back design would be **BBH 551 S00**.

Fabric Requirements: 1/2 yards per chair, Non-directional, 54" wide.

Please specify Wood Finish (Table 1), Upholstery; if applicable (Table 5) and Back Design (Above). Details can be found on pages GEN 4 and GEN 5.

General Specifications

CHAIR FRAMES

Each frame member is constructed from 1-1/4" hardwood. All frame joints are mortised, tenoned and glued. Legs, back posts, and stretchers are 1" x 2-3/16"W. Upper side rail is 1" x 3"W; lower side rail is 1" x 2-3/16"W. Front and back top rails are 1" x 2-1/2" shaped to receive seat. Tops of front and rear vertical post in side frames have a 3/4" radius, and the bottom of each leg receives a 3/4" radius. Front and back legs are coped with a 7/8" radius on the two outside edges. The top of the side seat rails, the top of the side stretchers and the top of the cross stretchers are also coped with a 7/8" radius.

All frames have a 3/4" solid hardwood support brace in each corner of the seat area to give added strength.

CHAIR SEAT

Standard adult wood seats are 3/4" thick, bent-plywood panel, faced with select hardwood veneers. Standard youth and juvenile wood seats are 1/2" thick bent plywood panel, faced with select hardwood veneers.

Note: Optional 3/4" thick, hardwood seats, (available at extra charge), are constructed of glued-up strips not less than 1" or more than 3"W. Seat panels are scooped for seating comfort.

Upholstered seats are constructed of 1/2" formed plywood. The plywood is covered with 2" thick foam prior to being covered by a selected upholstery material which is wrapped around and stapled to the underside of seat. The underside of the seat is covered with black cambric material.

CHAIR BACK

Chair back is 1" x 5" (youth & juvenile) or 6" H (adult) steam-bent, solid hardwood, screwed into vertical back posts on an 8 $\frac{1}{2}$ angle using four 2" joint connector bolts. Upholstered backs have a back platen which is curved plywood; prior to upholstery two tee-nuts are inserted into the platen. The platen is covered with 1" foam padding and upholstered with all edges wrapped and stapled to the back side of the platen. Upholstered platens are attached to the chair back by two machine bolts which pass through the solid chair back into the tee-nuts in the platen.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections and polyurethane foam are fire rated.

Fabrics which meet Calif. Technical Bulletin #133 are available.

GLIDES

Leg base chairs are equipped with rubber-cushioned glides.

SLED BASE CHAIRS

Sled base chairs are of the same construction as leg base chairs but receive two 1" x 2-3/16" rails tenoned and glued to the bottom of leg post to form a sled base. Sled base chairs do not receive glides.

General Specifications

Calyx Chair

FRAME

The chair frame is constructed of 5/8" diameter, 13-gauge steel tubing with reinforcing rods inside the bends. Frames are BIFMA tested. Frames will have a bright chrome surface finish or can be finished with electrostatic applied epoxy powder-coat paint. The legs are equipped with heavy-duty nylon glides.

SHELL

Shells are 9-ply Beech or Birch heat induction pressed plywood. Shell dimensions are 16"W x 17"D x 15"H x 1/2" thick. Available in three surface materials: Polyester, HP Laminate and Veneer.

GLIDES

Each chair leg is equipped with a 5/8" diameter heavy-duty nylon glide that fits inside chair leg.

Note: Calyx chairs are stackable up to 5 high.

Calyx Counter Height Stool

FRAME

The stool frame is constructed of 5/8" diameter, 13-gauge steel tubing with reinforcing rods inside the bends. Frames are BIFMA tested. Frames will have a bright chrome surface finish or can be finished with electrostatic applied epoxy powder-coat paint. The legs are equipped with heavy-duty nylon glides.

SHELL

Shells are 9-ply Beech or Birch heat induction pressed plywood. Shell dimensions are 16"W x 17"D x 15"H x 1/2" thick. Available in three surface materials: Polyester, HP Laminate and Veneer.

GLIDES

Each stool leg is equipped with a 5/8" diameter heavy-duty nylon glide that fits inside stool leg.

Calyx Bar Height Stool

FRAME

The stool frame is constructed of 1/2" diameter steel rod. Frames are BIFMA tested. Frames will have a bright chrome surface finish or can be finished with electrostatic applied epoxy powder-coat paint. The sled base frames are equipped with heavy-duty nylon glides.

SHELL

Shells are 9-ply Beech or Birch heat induction pressed plywood. Shell dimensions are 16"W x 17"D x 15"H x 1/2" thick. Available in three surface materials: Polyester, HP Laminate and Veneer.

GLIDES

Stool frames are equipped with external heavy-duty nylon glides that fit onto the sled base frame.

General Specifications

CHAIR FRAME

Front legs are 1-1/2" square at the top tapering to 1-3/8" square at the bottom. The back legs are 1-1/4" x 1" at the top tapering to 1-3/4" x 1" at the bottom. All vertical and horizontal edges are eased. Lower support stretcher brackets are positioned between the front and back legs and measure 1" x 3/4"; upper stretcher support brackets are located between the front legs and between the back legs and also measure 1 x 3/4". Seat rails are 2-1/4" x 3/4". All joints are mortised, tenoned, and glued.

ALL WOOD CHAIR SEAT

The chair seat is 1" thick solid wood, constructed of glued-up strips not less than 1" or more than 3"W. Seat panels are scooped for seating comfort.

CHAIR BACK

The chair back consists of a horizontal top and bottom rail, and four vertical slats positioned between the rails. The top horizontal rail is 3-1/4" x 3/4" at the center tapering to 2-1/4" x 3/4" at each end. The bottom vertical rail is positioned 1-1/4" above the seat and measures 1-1/2" x 3/4" at the center tapering to 2-1/4" x 3/4". The four vertical slats are positioned 1-5/8" apart and measure 1-1/2" x 3/8". The horizontal rails are mortised, tenoned, and glued into the back leg posts. The vertical slats are mortised, tenoned, and glued into the horizontal rails.

General Specifications

CHAIR FRAMES

Each frame member is constructed from 1-1/4" hardwood. All frame joints are mortised, tenoned, and glued. Legs, back posts, and stretchers are 1" x 2-3/16"W. Upper side rail is 1" x 3"W; lower side rail is 1" x 2-3/16"W. Front and back top rails are 1" x 2-1/2" shaped to receive seat. The vertical back rails are dog legged for comfort. Tops of front and rear vertical post in side frames have a 3/4" radius, and the bottom of each leg receives a 3/4" radius. Front and back legs are coped with a 7/8" radius on the two outside edges only. The top of the side seat rails, the top of the side stretchers and the top of the cross stretchers are also be coped with a 7/8" radius.

All frames have a 3/4" solid hardwood support brace in each corner of the seat area to give added strength. All seats are fastened with six "Z" brackets routed into the front and back rail and screwed into the bottom of the seat.

CHAIR SEAT

Standard wood seats are 1/2" (adult) or 3/4" (adult extra wide) thick, bent-plywood seat panel faced with select hardwood veneers.

Note: Optional 3/4" thick, hardwood seats, (available at extra charge), are constructed of glued-up strips not less than 1" or more than 3"W. Seat panels are scooped for seating comfort.

Upholstered seats are constructed of 1/2" formed plywood. The plywood is covered with 2" thick foam prior to being covered by a selected upholstery material which is wrapped around and stapled to the underside of seat. The underside of the seat is covered with a black cambric material.

CHAIR BACK

All wood chair backs are 1" x 5" (adult) or 6" (adult extra wide) steam-bent, solid hardwood, screwed into vertical back posts on a 16° angle. The 5" back receives a 1/4" horizontal-design route at the center, creating an appearance of two 2-3/8" slats. The 6" back receives two 1/4" horizontal-design routes positioned to create the appearance of three 1-13/16" slats. Upholstered backs are a full wrap-around, upholstered, 3/4" steam-bent solid-wood panel with an 8"H crown. The back is attached to the chair with four machine screws which pass through the chair back posts.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections and polyurethane foam are fire rated.

Fabrics which meet Calif. Technical Bulletin #133 are available.

GLIDES

Leg base chairs are equipped with rubber-cushioned glides.

SLED BASE CHAIRS

Sled base chairs are of the same construction as leg base chairs but receive two 1" x 2-3/16" rails tenoned and glued to the bottom of leg post to form a sled base. Sled base chairs do not receive glides.

Fabric Requirements: Back 1/4 yards and Seat 1/2 yards per chair, Non-directional, 54" wide.

Please specify Wood Finish (Table 1) and Upholstery; if applicable (Table 5). Details can be found on pages GEN 4 and GEN 5.

General Specifications

CHAIR FRAME

The chair frame is constructed of commercial-grade engineered Beech hardwood with components being double-doweled, glued, stapled and screwed. Reinforcing corner blocks are glued and stapled to the front and side rails. The front legs are 1-5/8" x 1"W. The back legs are tapered one piece steam bent 1-1/2" x 3/4" at the top, 2" at the seat rail, and 1-1/4" at base. The front, back and side rails measure 1-3/4" x 1-3/4"W. The chair receives 1" x 3/4"W side stretchers and a center horizontal stretcher. The seat height is 19" from the floor. The overall chair dimension is 34"H x 22"W x 22-1/2"D.

CHAIR SEAT - UPHOLSTERED

The upholstered chair seat is 1/2" thick multi-ply plywood. The seat receives Sytex 100% polyester sheet webbing applied with 1/2" staples at a 45° angle (minimum 3 staples per inch). A 2" thick, HR-55 high-resilient CFC-free, polyurethane foam is glued to the top surface of the seat then upholstered. Cambric material is applied to the bottom of the seat panel.

CHAIR BACK - UPHOLSTERED

The upholstered back is 1/2" thick multi-ply plywood. The back receives a 1/2" thick, HR-55 high-resilient CFC-free, polyurethane foam glued to the top surface of the back panel, then upholstered. The back is inserted in routes in the back crown and seat rail. The back is offered in partial or full upholstered design.

CHAIR BACK - WOOD

The back panel is 1/2" thick multi-ply plywood. The back is offered in exposed wood hourglass design.

CHAIR ARMS

The chair arm is constructed of commercial-grade engineered Beech hardwood. The arm are 1-1/2" x 1"W. The arm is attached to the front leg and frame with metal to metal connection for long term secure fastening.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections, polyurethane foam and Sytex are CAL 117 fire rated.

CHAIR GLIDES

Each chair leg is equipped with a 7/8" diameter rubber-cushioned glide.

General Specifications

CHAIR FRAME

Chair frame is 36" overall height and 18-1/2" overall width. Front legs are 1-5/8" square at the top tapering to 1-3/8" square at the bottom. The back post is bent from selected hardwood and finished to a thickness of 1-1/4" and is routed to a proper depth to accept the seat and seat apron to ensure that the vertical sitting load is supported by these horizontal routes. The back top rail is 3-1/2" overall height and 1" thick, and is bent to a radius of 18".

BACK FRAME

The top back rail is double doweled to the vertical back posts and reinforced with #10 x 1-1/4" wood screws. The Essex version with the accent hole gets a 2-1/4" diameter hole positioned on the centerline of top back rail.

On the Essex chair there are five vertical back slats, which are 1-1/2"W x 5/8" thick. The back slats are tenoned the glued into the top rail and bottom rail of the back frame. These slats are equally spaced.

The seat apron is bent from selected hardwood, finished to 7/8" thick by 1-5/8"W and is tenoned and glued to both the front legs and back posts. Side stretchers and cross stretchers are 1"W x 3/4" thick. All joinery is mortised, tenoned, and glued. The cross stretchers at the connecting joint are reinforced with steel pin.

CHAIR SEAT - UPHOLSTERED

The upholstered chair seat panel is 3/4" thick, curved 5-ply plywood. The seat receives 2" thick, HR-55 high-resilient polyurethane foam glued to the top surface of the seat panel, then upholstered. Cambric material is applied to the bottom of the seat panel. The seat rim rests on a horizontal notch in the back post and is attached to the frame by 11 wood screws that are screwed up through the seat apron into the bottom of the seat.

CHAIR SEAT - WOOD

The all-wood seat is 1-1/4" thick, made from random width boards between 1" and 4"W, and scooped for seating comfort. The seat rim rests on a horizontal notch in the back post and is attached to the frame by 11 wood screws that are screwed up through the seat apron into the bottom of the seat.

CHAIR GLIDES

Chairs are equipped with 7/8" diameter nylon glides.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections and polyurethane foam are fire rated.

Fabrics that meet Calif. Technical Bulletin #133 are available.

Upholstered Seat Chair with Top Slat Cutout

Fabric Requirements: 1/2 yards per chair, Non-directional, 54" wide.

General Specifications

CHAIR FRAME

Front legs are 1-3/4" square at the top tapering to 1-1/4" square at the bottom and radiused on the front outside frame corner. The back post is 1-1/2" x 1" at the top opening to 2-1/4" x 1" at the widest point, just below the seat platen and tapering to 1-5/8" x 1" at the bottom. All vertical and horizontal edges are eased. The top of the back post receives a radius on the front and outside edges to match the radius of the top back rail.

Two lower support stretchers are positioned between the front and back legs and measure 1" x 3/4"; upper stretcher supports are located between the front legs and between the back legs and also measure 1" x 3/4". Seat rails are 2-1/4" x 3/4". All joints are mortised, tenoned, and glued.

CHAIR SEAT— WOOD

The chair seat is 1" thick solid wood, constructed of glued-up strips not less than 1" or more than 3"W. Seat panels are scooped for seating comfort.

CHAIR SEAT— UPHOLSTERED

The chair seat is 1/2" thick plywood with the front corners receiving a 1-1/2" radius and 1-1/2" thick, 1850 FR Density polyurethane foam. The standard fabric is Brodart's grade one. Brodart's fabric selections and polyurethane foam are fire rated.

Fabrics which meet Calif. Technical Bulletin #133 are available.

CHAIR BACK

The chair back consists of a horizontal top and bottom rail and five vertical slats positioned between the rails. The top horizontal rail is 4" x 3/4". The bottom horizontal rail measures 3-1/2" x 3/4". The five vertical slats are positioned 1-1/4" apart and measure 1-1/8" x 1/2". The horizontal rails are mortised, tenoned, and glued into the back leg posts. The vertical slats are mortised, tenoned, and glued into the horizontal rails.

CHAIR ARMS

Arm is 2-3/8" x 1" at the front tapering to 1-1/4" x 1" at the back. The arm is attached 2" back from the front of the arm to a J-shaped vertical arm support that is 1-1/4" x 1" at the top, expanding to 1-5/8" x 1" at its connection point with the side seat rail. Vertical arm support is attached to the side seat rail with a wood lag bolt & fastened with a washer and nut. The arm is attached to the back post 7-1/2" above the seat platen with a wood screw. Screw head is counter-sunk and capped with a wooden cover.

CHAIR GLIDES

Each chair leg is equipped with a 7/8" diameter rubber cushioned nail glide.

This chair has passed the ANSI/BIFMA X5.1-2002 Type III test.

Upholstered Seat Chair with Arms

Fabric Requirements: 1/2 yards per chair, Non-directional, 54" wide.

Please specify Wood Finish (Table 1) and Upholstery; if applicable (Table 5). Details can be found on pages GEN 4 and GEN 5.

General Specifications

CHAIR FRAME

Each frame member is constructed from 1-1/4" hardwoods. All frame joints are mortised, tenoned and glued. All frames have a 3/4" solid hardwood support brace in each corner to give the chair added strength. All seats are fastened with six "Z" brackets routed into the frame and screwed into the bottom of the seat.

CHAIR SEAT

Chair seats are 1/2" thick bent multi-ply faced with select hardwood veneers.

UPHOLSTERED SEAT

Upholstered seats receive 1-1/2" thick HR-55, 2.8 density 55 ILD foam prior to being covered by a selected upholstery material that is wrapped around and stapled to the underside of the seat panel.

WOOD CHAIR BACKS

Chair backs are 5/8" thick bent multi-ply faced with select hardwood veneers. Adult backs are 6-1/2"H x 20-1/4"W. Youth backs are 5-7/8"H x 17-3/8"W.

UPHOLSTERED CHAIR BACKS

Upholstered chair backs have a back platen of curved plywood and receive 1/2" thick 1835 FR, 1.8 density, 35 ILD foam prior to being covered by a selected upholstery material that is wrapped around and stapled to the back of the platen. This upholstered back platen is screwed to the wood back from the rear support.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections and polyurethane foam are fire rated.

Fabrics that meet Calif. Technical Bulletin #133 are available.

GLIDES

Each chair leg is equipped with a 7/8" diameter rubber-cushioned glide.

CHAIR FRAME

Chair frame is 36" overall height and 18-1/2" overall width. Front legs are 1-5/8" square at the top tapering to 1-3/8" square at the bottom. The back post is bent from selected hardwood and finished to a thickness of 1-1/4" and is routed to a proper depth to accept the seat and seat apron to ensure that the vertical sitting load is supported by these horizontal routes. The back top rail is 3-1/2" overall height and 1" thick, and is bent to a radius of 18".

The Parallax chair is available with or without an accent hole in the back frame top rail, and with a wood seat or an upholstered seat.

BACK FRAME

The top back rail is double doweled to the vertical back posts and reinforced with #10 x 1-1/4" wood screws. The Parallax version with the accent hole gets a 2-1/4" diameter hole positioned on the centerline of the top back rail.

On the Parallax chair there are five horizontal back slats, which are 1-1/2"W x 5/8" thick. The back slats are tenoned and glued into the side rails of the back frame. These slats are equally spaced.

The seat apron is bent from selected hardwood, finished to 7/8" thick by 1-5/8"W and is tenoned and glued to both the front legs and back posts. Side stretchers and cross stretchers are 1"W x 3/4" thick. All joinery is mortised, tenoned, and glued. The cross stretchers at the connecting joint are reinforced with a steel pin.

CHAIR SEAT (UPHOLSTERED)

The upholstered chair seat panel is 3/4" thick 5-ply plywood. The seat receives a 2" thick, HR-55 high-resilient polyurethane foam glued to the top surface of the seat panel, then upholstered. Cambric material is applied to the bottom of the seat panel. The seat rim rests on a horizontal notch in the back post and is attached to the frame by 11 wood screws that are screwed up through the seat apron into the bottom of the seat.

CHAIR SEAT (WOOD)

The all wood seat is 1-1/4" thick, made from random width boards between 1" and 4"W, and scooped for seating comfort. The seat rim rests on a horizontal notch in the back post and is attached to the frame by 11 wood screws that are screwed up through the seat apron into the bottom of the seat.

GLIDES

Chairs are equipped with 7/8" diameter nylon glides.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections and polyurethane foam are fire rated.

Fabrics which meet Calif. Technical Bulletin #133 are available.

General Specifications

CHAIR FRAME/LEGS

Chair frames are constructed of 7/8" diameter steel tubing. Cross frames are constructed of 1/2" diameter steel tubing. Front and Rear Cross frames will be bent to follow the seat profile. Frames to be finished with electrostatic applied epoxy powder-coat paint available in a wide range of colors. Legs are equipped with heavy-duty black ABS glide inserts.

CHAIR SEAT

Chair seats are constructed of 1/2" thick molded plywood, faced with Maple, Oak or Walnut veneers. Chair seats measure 16-1/2"W at the front and taper back to 14"W x 18-1/4"D.

CHAIR BACK

Chair backs are constructed of 1/2" thick molded plywood, faced with Maple, Oak or Walnut veneers. Chair backs measure 17-3/4"W x 10-1/4"H.

CHAIR ARMS

Chair arms are constructed of 5/8" thick molded plywood, faced with Maple, Oak or Walnut veneers.

CHAIR GLIDES

Chairs are equipped with 2-3/8"H x 7/8" diameter nylon glides.

NOTES:

Chairs stack four high.

Chairs pass all ANSI / Bifma tests.

General Specifications

CHAIR FRAME

Each frame member is constructed from solid hardwood. All frame joints are mortised and tenoned. Horizontal front and back seat rails are 1" thick x 2-1/2"W. The two bottom horizontal cross stretcher rails are 1" thick x 1-1/4"W. On the end frames, the front post is 1" thick x 2-3/16"W, the two back posts are 1" thick x 2-3/8"W, the top side seat rail are 1" thick x 3"W and the two bottom side rails are 2-3/16"W x 1" thick. The end frame is 18-1/8"W at seat level and 24-5/8"W at floor level.

Four corner blocks of solid wood are glued and triple screwed to the end frames and the upper seat horizontal cross members the seats are attached with six metal "Z" brackets.

The bottom of the end frame is shaped so that the chair may sit level or be tilted back at a 10° angle.

CHAIR SEAT – WOOD

Wood seat is 3/4" thick, bent-plywood seat panel faced with select hardwood veneer.

CHAIR SEAT – UPHOLSTERED

Upholstered seat is constructed of formed 1/2" plywood and fitted with 1-1/2" thick foam prior to being covered with the selected upholstery material, which is wrapped around and stapled to the underside of the seat. The underside of the seat is covered with a black cambric material.

CHAIR BACK – WOOD

Chair back is 1" thick x 6"H steam bent solid hardwood in an arched design. Back is attached to vertical back posts at an 8° angle using four 2" joint connector bolts that pass through the vertical back posts.

CHAIR BACK – UPHOLSTERED

Upholstered Chair back is 3/4" steam-bent solid hardwood in an arched design. Back panel is fully wrapped with 1" thick foam prior to being covered by selected upholstery material. Back is attached to vertical back posts at an 8° angle using four 2" joint connector bolts that pass through the vertical back posts.

UPHOLSTERY MATERIALS AND FABRICS

Brodart fabric selections and polyurethane foam are fire rated.

Fabrics which meet Calif. Technical Bulletin #133 are available.

General Specifications

FRAME

End frame assemblies are constructed of 1" x 3"W solid red oak with outside edges bullnosed. All pieces are mortised, tenoned, and glued to form a solid frame. Leg type or sled type is available.

The front facing of 1" x 3-1/2"W solid oak and the back rail of 1" x 3-1/2" solid oak are mortised, tenoned and glued into the end frame assemblies. Solid hardwood corner blocks are positioned under the cushion frame and screwed to the end frame and the front and back rails.

UPHOLSTERED SEAT/BACK PANEL

The seat and back frame are a single piece of 3/4" bent plywood. The seat portion is fitted with a Dimatrol Webbing and then covered with black cambric fabric for comfort. This is then covered with 3-1/2" thick foam, which is also used on the chair back. The foam is mitered at the jointure of both the seat and back. The entire seat and back assembly is covered with the specified upholstery fabric, except for the underside of the seat which is covered with black cambric fabric.

Brodart upholstery materials meet requirements of the following fire codes: Calif. Technical Bulletin #117 (Sec. E part 1); CS-191-53 class 1.

Fabrics which meet Calif. Technical Bulletin #133 are available.

L1 – Seating has passed the American National Standards Test X5.41983 (ANSI).

GLIDES

Each end frame assembly receive two 1" diameter rubber-cushioned glides.

BENCH – FRAME

End frame assemblies are constructed of 1" x 3"W or 5"W solid oak, with all edges heavily eased. Facing rails are 1" x 3"W solid oak. Bench seats are attached to end frame assemblies by bolting through solid hardwood bolting blocks into internally and externally threaded brass bushings embedded into end frames.

LOUNGE TABLES – FRAME

See L1 Series Bench Frame Construction.

TABLETOP

Tabletop is 3-ply construction consisting of 3/4" thick particleboard core and 3" wood facings, with a .50" thick, high-pressure laminate top sheet and a backing sheet not less than .20" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining.

General Specifications

BRODART'S CONNECTING MODULAR LOUNGE SYSTEM

Lounge chairs are supplied either with arms on the left side only or the right side only as well as without arms. Individual chairs may be held in position with heavy-duty steel brackets which are provided with each chair.

FRAME

End frame assemblies will be constructed of 1" x 3" wide solid red oak with outside edges bullnosed. All pieces will be mortised, tenoned, and glued to form a solid frame. Leg type and sled type available.

The front facing of 1" x 3-1/2" wide solid oak and the back rail of 1" x 3-1/2" solid oak will be mortised, tenoned and glued into the end frame assemblies. Solid hardwood corner blocks will be positioned under the cushion frame and screwed to the end frame and the front and back rails.

UPHOLSTERED SEAT/BACK PANEL

The seat and back frame are a single piece of 3/4" bent plywood. The seat portion is fitted with a Flex-O-Lator perma mesh system and then covered with black cambric fabric for comfort. This is then covered with 3-1/2" thick foam, which is also used on the chair back. The foam is mitered at the jointure of both the seat and back. The entire seat and back assembly is covered with the specified upholstery fabric, except for the underside of the seat which is covered with black cambric fabric.

Brodart upholstery materials meet requirements of the following fire codes: Calif. Technical Bulletin #117 (Sec. E part 1); CS-191-53 class 1.

Fabrics which meet Calif. Technical Bulletin #133 are available.

GLIDES

Each end frame will receive two adjustable nickel/chrome floor glides.

TABLETOPS

Tabletop will be 1-1/4" thick, particleboard core with solid-wood edges, surfaced with .050 high-pressure laminate and backed with .020 phenolic sheeting. Top is 14" high.

The Top rests on the top edge of the adjoining end frames and is held securely in place with heavy-duty steel brackets, mechanically fastened to the underside of the top.

General Specifications

END FRAME ASSEMBLY

End frames are 24-1/4"H x 26-5/8"D x 2-1/2" thick skeletal type construction. The arm is 24-1/4" high at the front and arches down with a 71" radius to 20-3/4" high at the rear of the arm. The arm assembly receives a 1/4" polyurethane 1240 FR density foam wrap and is fully upholstered. When specified only, the end frame assembly will receive a 1" thick solid wood top cap of either red oak or maple as specified. The wood cap is 3-3/8" wide. The arm assembly on the bottom surface will receive two-nickel chrome plated nail glides.

UPHOLSTERED SEAT AND BACK

The seat and back frame are a single piece of 3/4" bent-plywood. The seat portion is fitted with a Dimatrol Webbing and then covered with black cambric fabric for comfort. This is then covered with 3-1/2" thick foam, which is also used on the chair back. The entire seat and back assembly are covered with the specified upholstery fabric except for the underside of the seat which is covered with a black cambric fabric.

Brodart upholstery materials meet requirements of the following fire codes: Calif. Technical Bulletin #117 (sec. E part 1); CS-191-53 class 1.

Fabrics which meet Calif. Technical Bulletin #133 are available.

Seat height at front – 17"

Arm height – 24-9/32."

SEAT TO ARM STRETCHER RAIL

The front rail is 24-3/4" long x 3-1/2" wide and wrapped with the same 1/4" foam as the ends and upholstery. The seat support rail is 24-3/4" long x 3-1/2" wide and is not upholstered. The rear rail is 24-3/4" long x 11-7/8" wide and is wrapped with the same 1/4" foam as the ends, and is upholstered. All rails are bolted with 1/4"- 20 bolts through metal brackets into metal bushings inserted in the arm assemblies.

General Specifications

END FRAME ASSEMBLY

End frames are constructed of legs that are 1" thick x 3"W, a bottom stretcher rail 1" thick x 2-1/4"W and a top arm rail 2-1/2"W x 1" thick that is arched to match the radius of the arm. All parts are constructed from solid red oak. All joints are mortised, tenoned, and glued to form a solid unit.

The arm is 1" thick x 3-3/8"W at the front and tapers to a width of 2-5/8" at the back. The arm is constructed of solid red oak which has been steam bent to a 72" radius.

The front stretcher and front seat rail are 3"W x 1" thick solid red oak. The back seat rail is 2-3/4"W by 1" thick solid red oak. The cross stretcher and seat rails are mortised, tenoned, and glued into the side frames.

UPHOLSTERED SEAT AND BACK

The seat and back frame are a single piece of 3/4" bent-plywood. The seat portion is fitted with a Dimatrol Webbing and then covered with black cambric fabric for comfort. This is then covered with 3-1/2" thick foam, which is also used on the chair back. The entire seat and back assembly are covered with the specified upholstery fabric except for the underside of the seat which is covered with a black cambric fabric.

Brodart upholstery materials meet requirements of the following fire codes: Calif. Technical Bulletin #117 (sec. E part 1); CS-191-53 class 1.

Fabrics which meet Calif. Technical Bulletin #133 are available.

Seat height at front – 16-3/4."

Arm height – 24-9/32."

WOOD PLATEN FOR SIDE FRAME (OPTIONAL)

A 1/4" thick wood platen can be inserted into the side frame at the time of manufacture. This frame is constructed of 1/4" veneered plywood and is mortised into the adjoining frame members.

UPHOLSTERED SIDE FRAME (OPTIONAL)

The side frame is upholstered using 1/4" fire-resistant polyurethane foam over a 1/4" platen and covered with the selected upholstery material.

General Specifications

TABLETOPS

Tabletops are 1-3/16" thick, 3-ply, 45# density particleboard core with a .050" thick, high-pressure laminate top sheet and a backing sheet not less than .020" thick for balanced construction. High-pressure laminate has a lo-glare finish resistant to scratches, fading, and staining. Edges are solid Northern-grown red oak. The edge band is applied before the top laminate sheet constituting an internal edge band.

APRON

A 3-1/2"W x 1" thick solid Northern-grown red oak apron is fitted between the legs, and behind the extended tabletop edge band. Bottom edge and both ends of each apron receive a 1/2" radius. Aprons are secured to the tabletop by attaching hardwood cleats to the inside surface of the aprons and screwing through the cleats into the underside of the tabletop.

LEGS

Legs are glued up, 2-1/4" solid Northern-grown red oak. All vertical edges of legs receive a 1/2" radius. Bottom edges of legs are radiused 1/8". Each leg has a 2" diameter, adjustable glide mounted in a recessed tee-nut. The glide is further recessed into the leg by means of counter-sunk boring which accepts the upper two-thirds of the glide. Legs attach to the aprons by means of formed 14-gauge steel corner brackets. Each leg is bolted to the corner bracket with two 5/16"-hex-head bolts per leg.

Note: Cylinder and Cube Table are All Wood Veneer with no laminate.

Please specify Wood Finish (Table 1). Details can be found on page GEN 4.

General Specifications

FRAME

Frame members are constructed from premium hardwood plywood and rails, posts, and other main frame parts are of lumber not less than 5/4" thick kiln dried to a moisture content of 6-8%. All lumber is of sound stock, without knots, shakes or other defects which affect appearance and/or performance. All main frame joints are puzzle-joint construction with overlapped and notched hardwood plywood components. In addition, the frame is glued, stapled, and wood screws are used where necessary for further structural integrity.

UPHOLSTERY CONSTRUCTION

The seat platform is constructed with sinuous 7.5-gauge steel wire springs firmly attached to the front and back rails. Springs are installed on 5" c/c. A spring unit surface is attained by attaching two (2) 16 gauge insulated steel tie wires (#F16SW) to each spring with Hartco clips running the entire length of the seat. A Flex-O-Lator unit is laid over the springs. The surface is covered with a layer of woven polypropylene matting and five (5) inches of Ultracel premium polyurethane foam.

The back receives Universal sinuous 7.5-gauge steel wire springs firmly attached to the top and bottom rails. Springs are installed on 5" c/c. A spring unit surface is attained by attaching two (2) 16-gauge insulated steel tie wires (#F16SW) to each spring with Hartco clips running the entire length of the back. A 2-1/2" layer of premium ultracel polyurethane foam with a compression of 20 pounds is covered with a layer of polyester fiber. The surface is covered with a layer of woven polypropylene matting and 2-1/2" Ultracel premium polyurethane foam.

Arm sides are covered with furniture grade paperboard. The tops of the arms receive a contoured H.D. bonded foam insert for softness and a final layer of 1/2" foam is applied over the top and sides of the arms.

TABLET ARM

Standard tablet arm is bow front laminate top with black T-mold. WilsonArt laminates available for the laminate surface. Tablet is mounted to the right arm in the seated position. Standard bow front design is 22"W x 13"D. Tablet arm available in optional left arm seated position.

Note: WilsonArt Black 1595-60 laminate is the standard on tablet arm. Please designate the WilsonArt laminate to be provided.

CASTERS (OPTIONAL)

Front casters are locking hard wheel with a load rating of 110 lbs. Mounting height is 2-1/2", wheel diameter is 55mm and cup diameter is 45mm.

FINAL ASSEMBLY

The underside bottom of the chair is covered with a sheet of cambric for dust protection. The base frame of the chair receives four extruded plastic legs. Legs measure 2-1/2"H and are 2" diameter. Chairs are packed using padding and shrink wrap to minimize movement during shipping.

WOOD FINISH

Exposed wood is of Beech construction and machine sanded and stained. Wood is then sealed and finished with a conversion varnish topcoat.

C.O.M. FABRIC

For C.O.M. fabric on multiple rolls, add an additional yard of fabric per roll to the yardage requirements. Multiple rolls have shorter pieces of fabric and do not allow nesting or stacking to achieve the best yield which may result in yardage shortages. Request for additional fabric from the client may delay the order. Yardage should be added to the roll and not provided separately.

Brodart upholstery materials meet requirements of the following fire codes: Calif. Technical Bulletin #117 (Sec. E part 1); CS-191-53 class 1.

Fabrics which meet Calif. Technical Bulletin #133 are available.

General Specifications

TOPS

When specified, optional tops will be 1-3/16" thick, 3-ply 45# particleboard grade M2 or better with a top surface of .050" thick, high-pressure laminate and a backing sheet not less than .020" thick for balanced construction. High-pressure laminate will be log-lam finish resistant to scratches, fading, and staining that meets or exceeds NEMA standards. Top will receive bands on one long and two short edges. Edges will be solid Northern-grown Red Oak or Maple. The edge band will be a flush design 5/8" thick x 1-3/16", of specified profile design, externally banded with a 1/4" radius at corners.

SUBTOP

The cabinet will receive two (2) 3/4" x 6" 7-ply, furniture grade veneer-core hardwood plywood rails in the top (front and rear) of the cabinet. The rails will be doweled and pocket screwed to the end panels to complete construction of the cabinet. The sub top rails will anchor the top to the cabinet.

END PANEL

End panels will be 3/4" thick, 7-ply, furniture grade veneer-core hardwood plywood, with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides. Exposed edges are externally banded with a 3/4" x 1.5mm solid, Northern-grown Red Oak or Maple veneer edge band. When specified, the end panel receives 32mm boring for shelf adjustment. The end panels and sub top will be joined with dowel pin construction and pocket screws. Each panel will receive two (2) 3/4" nylon nail glides.

BASE

The cabinet will receive a 3/4" Thick x 4" high 7-ply, furniture-grade veneer-core hardwood plywood base rail in the front and rear of the cabinet. The rails will be doweled and pocket screwed to the end panels to complete construction of the cabinet. Exposed edges will be externally banded with a 3/4" x 1.5mm solid, Northern-grown Red Oak or maple veneer edge band. Base rails will be positioned inside the end panels of the cabinet.

BACK PANEL

The back panel will be 3/4" thick, 7-ply furniture-grade plywood with plain sliced Northern-grown Red Oak or Maple veneers. The top and end panels will receive a dado which captures the back panel on three sides. The back will receive six (6) 5/8"- #8 Philips pan head screws fastened to the hanger rails and end panels. The back panel will rest on the base rail.

DOOR

When specified, doors will be 3/4" thick, 7-ply furniture-grade veneer-core hardwood plywood with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides. Exposed edges will be externally banded with a 3/4" x 1.5mm thick solid, Northern-grown Red Oak or maple veneer edge band. Each door receives two (2) European hinges and one four inch flat black wire pull. A solid oak or maple door stop, 3/4" thick x 2-1/8"H is placed at the top and bottom of the wardrobe and runs the entire width of the cabinet. Doors will be 3/4" half overlay in the cabinet.

SHELVES

When specified, shelves will be 3/4" thick, 7-ply, furniture-grade veneer-core hardwood plywood, with plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed edges are externally banded with a 3/4" x 1.5mm thick solid, Northern-grown Red Oak or maple veneer edge band.

SPACER RAIL

When specified, cabinets with drawers will receive spacer rails placed between drawers for structural support and as a drawer stop. Rails are 1" thick furniture-grade veneer-core hardwood plywood. The rails will be doweled and pocket screwed to the end panels to complete construction of the cabinet.

HANGER RAIL

The cabinet will receive a 3/4" x 4" 7-ply, furniture-grade veneer-core hardwood plywood rail in the top, bottom and middle rear of the cabinet. The rails will be doweled and pocket screwed to the end panels to complete construction of the cabinet. Hanger rails will be positioned inside the end panels of the desk module.

DRAWER

When specified, drawers will be constructed of solid hardwood with 1/4" thick wood bottom panel. Drawers will have 3-ply particleboard fronts with select Northern-grown Red Oak or Maple face veneer. Drawers will receive full extension slides with 100# load capacity and one four inch flat black wire pull.

General Specifications

TOPS

Standard top will be 3/4" thick, 7-ply furniture-grade veneer-core hardwood plywood with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides. Exposed edges will be externally banded with a 3/4" x 1.5mm solid, Northern-grown Red Oak or maple veneer edge band.

END PANEL

End panel will be 3/4" thick, 7-ply, furniture-grade veneer-core hardwood plywood, with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides. Exposed edges will be externally banded with a 3/4" x 1.5mm solid, Northern-grown Red Oak or Maple veneer edge band. The end panel will receive 32mm boring for shelf adjustment. The end panels, top and base will be joined with dowel pin construction and pocket screws.

BASE

Standard base will be 3/4" thick, 7-ply furniture-grade veneer-core hardwood plywood with plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed edges will be externally banded with a 3/4" x 1.5mm solid, Northern-grown Red Oak or maple veneer edge band.

BACK PANEL

The back panel will be 1/4" thick, 3-ply furniture-grade plywood with plain sliced Northern-grown Red Oak or maple veneers. The top, base and end panels will receive a dado which captures the back panel on four sides. The back will be glued and pin tacked to the hanger rails.

HANGER RAIL

The cabinet will receive 3/4" x 4" 7-ply, furniture-grade veneer-core hardwood plywood rail in the top, middle and bottom rear of the cabinet. The rails will be doweled and pocket screwed to the end panels to complete construction of the cabinet. Hanger rails will be positioned inside the end panels of the desk module.

DOOR

When specified, doors will be 3/4" thick, 7-ply furniture-grade veneer-core hardwood plywood with plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed edges will be externally banded with a 3/4" x 1.5mm thick solid, Northern-grown Red Oak or maple veneer edge band. Each door will receive two (2) European hinges and one four inch flat black wire pull. A solid oak or maple door stop, 3/4" thick x 2-1/8"H will be placed at the top and bottom of the wardrobe and run the entire width of the cabinet. Doors will be 3/4" half overlay in the cabinet.

SHELVES

Shelves will be 3/4" thick, 7-ply, furniture-grade veneer-core hardwood plywood, with plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed edges will be externally banded with a 3/4" x 1.5mm thick solid, Northern-grown Red Oak or maple veneer edge band.

General Specifications

TOPS

Standard top will be 3/4" thick, 7-ply furniture-grade veneer-core hardwood plywood with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides. Exposed edges will be externally banded with a 3/4" x 1.5mm solid, Northern-grown Red Oak or Maple veneer edge band. Top will be positioned over and flush with the outside edges of the end panels.

END PANEL

End panel will be 3/4" thick, 7-ply, furniture-grade veneer-core hardwood plywood, with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides. Exposed edges will be externally banded with a 3/4" x 1.5mm solid, Northern-grown Red Oak or maple veneer edge band. The end panels and top will be joined with 12-gauge angled metal brackets 3/4" x 3/4" screwed to the inside surface of the panel and top. Each panel will receive two (2) 3/4" nylon nail glides.

INTERMEDIATE PANEL

When specified, intermediate panel will be 3/4" thick, 7-ply, furniture-grade veneer-core hardwood plywood, with plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed edges will be externally banded with a 3/4" x 1.5mm thick solid, Northern-grown Red Oak or Maple veneer edge band.

BASE

The cabinet base will receive a 3/4" x 4" 7-ply, furniture-grade veneer-core hardwood plywood rail in the front and rear of the cabinet. The rails will be doweled and pocket screwed to the end panels to complete construction of the cabinet. Exposed edges will be externally banded with a 3/4" x 1.5mm thick solid, Northern-grown Red Oak or maple veneer edge band. Base rails will be positioned inside the end panels of the desk module.

BACK PANEL

The back panel will be 1/4" thick, 3-ply furniture-grade plywood with plain sliced Northern-grown Red Oak or Maple veneers. The top and end panels will receive a dado which captures the back panel on three sides. The back will receive ten (10) 5/8"- #8 Philips pan head screws fastened to the hanger rails and end panels. The back panel will rest on the base rail.

SHELF

Shelf will be 3/4" thick, 7-ply, furniture-grade veneer-core hardwood plywood, with plain-sliced slip matched Northern-grown Red Oak or maple veneer on both sides. Exposed edge on the front side of the shelf will be externally banded with a 3/4" x 1.5mm solid, Northern-grown Red Oak or Maple veneer edge band. The shelf will be secured with 12-gauge angled metal brackets 3/4" x 3/4" screwed to the inside surface of the panel and top.

CLOTHES BAR

When specified, a solid 1-1/4" diameter Birch dowel rod clothes bar will be placed below the fixed shelf and spans the full width of the wardrobe. The bar will be secured by two (2) 2-1/2" x 2-7/32" round pole sockets. The sockets will be fastened to the end panel with wood screws.

HANGER RAIL

The cabinet will receive a 3/4" x 4" 7-ply, furniture-grade veneer-core hardwood plywood rail in the top, bottom and middle rear of the cabinet. The rails will be doweled and pocket screwed to the end panels to complete construction of the cabinet. Hanger rails will be positioned inside the end panels of the desk module.

DOORS

Doors will be 3/4" thick, 7-ply furniture-grade veneer-core hardwood plywood with plain-sliced slip matched Northern-grown Red Oak or Maple veneer on both sides. Exposed edges opposite the hinges will be externally banded with a 3/4" x 1.5mm thick solid, Northern-grown Red Oak or Maple veneer edge band. Each door will receive three (3) black five knuckle institutional hinges and one four inch flat black wire pull. A solid oak or maple door stop, 3/4" thick x 2-1/8"H will be placed at the top and bottom of the wardrobe and runs the entire width of the cabinet. Doors will be inset in the cabinet.

General Specifications

BOOK SHELF UNIT

Shelves are constructed of 18-gauge metal. Book shelves are flat and 10"D. All units come with an acrylic signage display area at the top of the unit. The viewable display area is 3-1/4"H x 48"W.

MEDIA SHELF UNIT

Shelves are constructed of 18-gauge metal. Media shelves are set at an angle for easy viewing and are 6-1/2"D. Nickel plated wire metal dividers are available for the media shelves and can be inserted in 1-3/4" increments. Media shelves also come with a 1/8" thick acrylic lip that runs the length of the shelf and protrudes above the base of the shelf 2-1/4".

END PANELS

End panels are available in both solid and slatwall configurations. Panels are constructed of 3/4" Veneered Particleboard and banded with 1.6mm edge banding. The panels are mounted to the unit via two 14-gauge metal brackets.

DOUBLE-FACED CAPACITY:

CD:	1200	Elementary Books:	320
DVD:	960	Picture Books:	450
CD w/Security:	1,000	Adult Books:	270
DVD w/Security:	800		

Note: Units 25% longer than traditional display units.

General Specifications

Construction is solid hardwood not less than 3/4" thick. Except when indicated, each truck is supplied with two fixed and two swivel carpet casters with 5" diameter tires. Each caster is attached with four lag screws, except as indicated. Caster forks are steel, heat treated, and bright nickel plated. Wheels are gray rubber, 1-9/32"W on ball bearings. Seals and O-rings are used to produce a quiet caster. Load capacity rated at 200# per caster.

Electrical Accessories

2017 Price List and Specifications

Brodart Co. Contract Furniture - Made in USA

280 North Road, Clinton County Industrial Park • McElhattan, PA 17748

Toll-Free: 888-521-1884 • E-Mail: furniture@brodart.com • www.brodartfurniture.com

General Specifications

The Brodart power distribution system distributes power from the building's power supply to the furniture through the use of power-distribution channels which may be interconnected to allow multiple pieces to be shared from one power source. The components of the system are as follows:

A.) Power entry: Connects the building's power supply and feeds power to the furniture.

B.) Power-distribution channel: Houses duplex electrical outlets to access power and serves as a wire management channel.

C.) J-channel: An optional wire management tray, which may house data jacks. This channel is necessary when additional storage is required or when data lines are run in addition to electrical cords.

POWER-ENTRY ASSEMBLIES

Single-circuit power-entry assembly consist of a wood chase that is fastened to the unit with modular fasteners, a PVC plastic liner fastened to the wood chase, and the power-entry cable which is fastened inside of the PVC liner. The power entry cable has a 24" STO cord fitted with a 20-amp plug at the bottom of the assembly and a flexible metal conduit with a quick-connect coupling at the top. This power-entry assembly is used for single-circuit power distribution systems and provides access to circuit #1. The assembly can be plugged into any 20-amp outlet.

Multiple-circuit power-entry assembly is to be used if more than one circuit is required. The multiple-circuit power-entry assembly consists of a wood chase that is fastened to the unit with modular fasteners, a PVC plastic liner that is fastened to the wood chase and the power-entry cable which is fastened inside the PVC liner. The bottom of the power-entry has a 72" long liquid-tight conduit. Inside the conduit is an eight-wire harness that is wired to four building circuits: three sharing a common ground and one dedicated with an isolated ground.

Single-Circuit Power Entry
(Plug Type)

Multiple-Circuit Power Entry
(Hardwire Type)

The top of the power entry consists of a flexible metal conduit and a quick-connect coupling. This power entry is required when more than one circuit or when an isolated with a dedicated ground is required. This assembly must be installed by a qualified licensed electrician. A multiple-circuit system is required under the following conditions:

- 1.) The length of the wiring served by the power entry exceeds 30 feet.
- 2.) The total amperage served by the power entry exceeds 20 amps.
- 3.) A dedicated computer circuit is required. The dedicated computer circuit on system is circuit #4.
- 4.) More than thirteen (13) duplex receptacles are required.

Note: One power-entry assembly is required for each building power source accessed.

PANEL-MOUNT, POWER-DISTRIBUTION CHANNEL

The panel-mount power-distribution channel is constructed of 20-gauge steel and is finished using a black electrostatically applied epoxy powder paint. The channel is open at the top to allow excess wire to be stored behind the power blocks and the duplex receptacles. Front of the channel has cut-outs so two duplex outlets can be mounted. The duplex outlets are rated 15-amps at the receptacle with 20-amps though power. The duplex outlets are connected to each other and the power entry by means of 3/4" flexible metal conduit, which has a quick-connect coupling. The cable consists of an eight-wire, four-circuit system with three standard utility circuits and one isolated circuit with a dedicated ground (computer circuit). If a channel is ordered with one duplex outlet, a plastic cover is provided to cover the unused hole. Units mount to back panels or table keels.

Panel Mount Power-
Distribution Channel

15-AMP POWER-ENTRY LEGS

Power-entry legs are to be used with leg-base tables and computer-access stations. Power-entry legs are available in single circuit only. Power-entry legs are finished to match the other legs on the table.

Note: 15-amp power legs cannot accept power strips. Receptacles are for electrical device only.

WIRE MANAGEMENT LEGS

Wire management legs are to be used with leg-base tables and computer-access stations. Wire management legs are finished to match the other legs on the table and allow wires to be run from the floor to the table inconspicuously.

J-CHANNEL (OPTIONAL)

J-Channel is constructed using 18-gauge steel and is finished using a black electrostatically applied epoxy powder-paint. The J-Channel attaches to the bottom of the power-distribution channel with the same screws that attach the power-distribution channels to the unit. The channel is 3-1/8"H and 4"D; the front lip of the channel is 2"H. The J-Channel provides additional wire-storage capacity or a data wire-management channel when data lines are required. J-Channel has four square holes that hold either communication or data jacks. Unit uses modular insert data jacks, which must be ordered separately.

J-Channel

DUPLEX OUTLET RECEPTACLES (Multiple-Circuit System)

Duplex outlets can be ordered to access any of the four circuits available in the power-distribution channel. You must specify the number of the circuit to be accessed for each duplex outlet ordered. Circuit IV outlets access the isolated circuit with the dedicated ground. If circuit numbers are not specified, your power-distribution channels are shipped with circuit one duplex outlet receptacles. Duplex outlets are easily interchanged within the power-distribution assembly by pushing the duplex receptacle sideways and then pulling it out.

When ordering duplex receptacles for circuits I, II, III, or IV, the following catalog numbers should be specified.

Catalog No.	Description	Price
X3 001 S00	Circuit I	\$65
X3 002 S00	Circuit II	\$65
X3 003 S00	Circuit III	\$65
X3 004 S00	Circuit IV (Isolated Circuit)	\$65

X= Electrical Distribution Channel

O = Bypass Channel

Notes:

If electrical distribution is not required in a given unit within a range of desks, and electric bypass channel can and must be used to continue the run of power to other units in the range.

Wire Management Trays are to be used to separate power from data.

XX-015-E15 Book Return Unit will receive a by-pass in most layout configurations.

All Closed Corner Units receive a factory installed PVC channel for by-pass (sold separately).

X1 942 S04 MAP	Leg & Apron Type for 32"H Table	\$649
X1 942 S05 MAP	Leg & Apron Type for 39"H Table	\$693

Leg is 2-1/4" square, 1/8" thick wall, aluminum extrusion with 3/4" radius on the outside corners. Leg is oak veneer wrapped to match other legs on the table and has three receptacles for power outlet and a 2' SJT power cord. A Hi-Pot Test of insulation and connections of 1,200 volts is given to each leg.

Note: The use of grommets for wire passage through the work surface is recommended. 15-amp power legs cannot accept power strips. Receptacles are for electrical device only.

59W 945 S02 MAP	Wood Leg for 27-1/2"H Table	\$388
59W 945 S03 MAP	Wood Leg for 25"H Table	\$388

Leg is constructed according to standard Epoch leg construction. The leg will receive a 3/4" wide slot located in the back of the leg underneath the angle bracket, 6-5/16" down from the top of the leg and 2-1/4" from the bottom of the leg. A spring loaded cover of 1/8" bent metal will provide access and storage of electrical cords. The spring loaded cover will provide a 1" D egress at the top and bottom of the slot for cords. The leg is powder coated, chromed, or wrapped in wood veneer according to the product specified.

The unit has six electrical outlets with resettable circuit breaker and comes standard with four RJ45 category 5 data jacks with 9' patch cords and two 9' SJT cords. The access doors are spring loaded and open to an approximate 42° angle. The access door is held closed with a spring-loaded clasp. Unit mounts into the tabletop. Door opening is 4-1/4"D x 8-3/8"W.</p>	\$1,195
------------	--	---------

Note: Data jacks are wired for TIA/EIA T568A. For factory cutout to install the unit, a sketch must be provided to show the unit in the work surface with dimensions noting the exact location.

Tabletop/Worksurface Distribution
Table Power Tap, Round

XSU PT4RD S	<p>Table Power Tap, Round Unit is designed to allow hidden power and data access in a work surface. Constructed of black ABS plastic, the unit contains three (3) 15-amp outlets and two (2) Cat 5 Ethernet connections. Power cord is 8' in length. Unit fits into a 4-7/32" diameter hole and overall dimension is 4-3/8" diameter.</p>	\$298
-------------	---	-------

Note: For factory cutout to install the unit, a sketch must be provided to show the unit in the work surface with dimensions noting the exact location.

Power Sphere (Fits into Standard 3" Grommet Hole)
Two Outlets per sphere - 8 spheres can be linked off one plug (in sequential order)

XBE01640L1 S	Power Sphere Starter, Link 1, 10' Cord & Plug	\$312
XBE01640L2 S	Power Sphere Adder, Link 2, 5' Cord (Black/Red)	\$239
XBE01640L3 S	Power Sphere Adder, Link 3, 5' Cord (Red/Blue)	\$239
XBE01640L4 S	Power Sphere Adder, Link 4, 5' Cord (Blue/Orange)	\$239
XBE01640L5 S	Power Sphere Adder, Link 5, 5' Cord (Orange/Yellow)	\$239
XBE01640L6 S	Power Sphere Adder, Link 6, 5' Cord (Yellow/Green)	\$239
XBE01640L7 S	Power Sphere Adder, Link 7, 5' Cord (Green/White)	\$239
XBE01640L8 S	Power Sphere Adder, Link 8, 5' Cord (White)	\$239

Unit is designed to fit into a standard 3" grommet hole. This 15A system can link up to 8 duplex devices (must be connected in sequence). Each module contains two outlets.

Note: For factory cutout to install the unit, a sketch must be provided to show the unit in the work surface with dimensions noting the exact location.

General Specifications

Have electrical power and data access conveniently located; where you need it and in the format required by your computer system and all other electrically powered equipment. Prevent wire clutter by storing excess cables and wires in wire-management channels.

Based upon your specification, Brodart provides single or multi-circuit power systems with optional dedicated computer circuitry. Also, a choice of 15-amp or 20-amp systems, as you specify. Quick-connect cable couplings are utilized by Brodart to permit easy, on-site installations and to provide for rearrangement as changing needs dictate.

NOTES: Grommets are not always included as standard with the product. If wires are to be passed through work surfaces or from one unit to another you will need to order the grommets separately. For factory-cut holes to install grommets, a sketch must be provided to show the unit in the work surface with dimensions noting the exact location.

<i>Plastic J-Channel Wire Manager</i>			
X1 700 020	<p>Plastic J-Channel Wire Manager Constructed of dark brown ABS plastic. Designed to be mounted by screwing or stapling to most surfaces. Front "J" is flexible for inserting cords. Inside dimensions: 1-1/2"H x 1"W x 72"L</p>	\$86	
<i>Data and Communication Raceway, 1/2"H x 1"W x 6'L</i>			
X1 700 065	<p>Data and Communication Raceway, 1/2"H x 1"W x 6'L One-piece, black, latching surface raceway for low voltage communications cabling applications. Supplied with preapplied adhesive-backed tape for trouble-free and permanent mounting. Will hold up to four data cables. Can be used with category 5 and fiber optic cabling applications.</p>	\$107	
<i>Power Data Raceway, 7/8"H x 1-1/2"W x 10'L</i>			
X1 700 066	<p>Power Data Raceway, 7/8"H x 1-1/2"W x 10'L One-piece, brown, latching surface raceway for data, voice, video, fiber optic and power cabling applications. Unit has two channels that can route both power and data. Supplied with preapplied adhesive-backed tape for trouble-free and permanent mounting. Unit requires screw mounting when using for power applications.</p>	\$164	
<i>Wire Manager For Table Mounting</i>			
X1 700 030	22" J-Channel, 3-1/2"H x 22"W x 3-1/4"D	\$72	
X1 700 031	28" J-Channel, 3-1/2"H x 28"W x 3-1/4"D	\$92	
<p>Designed for electrical or data cables, unit is constructed of 18-gauge steel with electrostatically applied black powder-paint. Designed to be mounted to the underside of a tabletop.</p> <p>Note: Grommets are not always included on product as a standard item. If wires are to be passed through the work surface or from one unit to another, grommets may need to be ordered separately.</p>			
<i>Wire Manager For Panel Mounting</i>			
XJ 012 S00	30" J-Channel, 3-1/8"H x 30"W x 4"D	\$145	
XJ 673 S00	32" J-Channel, 3-1/8"H x 32"W x 4"D	\$145	
XJ 047 S00	38" J-Channel, 3-1/8"H x 38"W x 4"D	\$164	
XJ 460 S00	44" J-Channel, 3-1/8"H x 44"W x 4"D	\$175	
<p>Designed for electrical or data cables, unit is constructed of 18-gauge steel with electrostatically applied black powder-paint. The front lip of the panel is 2"H. Unit mounts to back panels or keels.</p> <p>Note: Grommets are not always included on product as a standard item. If wires are to be passed through the work surface or from one unit to another, grommets may need to be ordered separately. Modular insert data jacks sold separately.</p>

Vertical Wire Chase, Oak Wood

X1 700 195 OAK	Wood Wire Chase for 25"H Work Surface, Actual height 22"	\$164
X1 700 197 OAK	Wood Wire Chase for 29"H Work Surface, Actual height 26"	\$205
X1 700 199 OAK	Wood Wire Chase for 39"H Work Surface, Actual height 36"	\$223

Vertical Wire Chase, Maple Wood

X1 700 195 MAP	Wood Wire Chase for 25"H Work Surface, Actual height 22"	\$164
X1 700 197 MAP	Wood Wire Chase for 29"H Work Surface, Actual height 26"	\$205
X1 700 199 MAP	Wood Wire Chase for 39"H Work Surface, Actual height 36"	\$223

Designed to manage cords below the work surface, unit is constructed the wood species specified and finished to match. Inside Dimensions are 2-1/4" x 3"

Flexible Wire Management Channels (Leg Style)

73 210 S00	32" for Sitting Height Tables	\$329
73 210 S01	39" for Standing Height Tables	\$362

Metal Vertical Wire Manager

X1 700 050	Vertical Wire Manager for Table Mounting Designed to be mounted underneath the work surface below a grommet. Unit is constructed of a 3-1/2" diameter steel tube and finished with black electrostatically applied powder paint.	\$254
